

Re: 81876: FreeLinc, FCC ID: TDA-FMT100

Date: September 25, 2009

From: Met Labs

1. The data on the original test report showed 15.207 emissions that could be at or above the limits for QP and Average at 191.4 kHz and 383 kHz. Please justify why these emissions do not appear in the data for the retest.

CT Comments:

The test data in the file for the original report was recorded over accidentally by a technician measuring data for another project. When the original report was generated the wrong data was inserted into the report.

The data provided in the revised report is correct.
