Attn: To whom it may concern

This letter outlines the changes that have been made to the CM2202N module. The following component changes have been made:

C3 has changed from 2.7pf to 5.6pf
L1 has changed from 33nH to 27nH
C9 has changed from 1.0pf to 1.5pf

Test points, TP2 to TP6, have been added and a meandering line has been added to the antenna to improve the impedance. The model number and manufacture label has been moved from the topside of the board to the backside of the board. Both the FCC ID and the IC label is laser etched onto the lid. Testing has shown that the CM2202N module with the prescribed changes meets all of the FCC and IC requirements.
