

Front of Meter

The end use will not be able to see our module, the only visual clue that there is an Cellnet+Hunt product in the meter will be the label on the meter shell stating the unit's serial number and FCC ID of the module located inside. (Exhibit C-Exterior Label)

The other label on the meter shell is produced by Landis + Gyr, and is a standard Watt-Hour meter label stating such things as: Meter ID, Class, Voltage, etc.
