

Application No.: HM155029

Date: 2005-09-12

FCC ID: TLQ110800502T4

Circuit Description

The 49.86MHz crystal oscillator drives the base of Q1 the final/buffer amplifier. The modulation provided by U1. The output of Q3 has the matching network consisting of L4, L3 and C10, C12, C11 that limit the harmonic content and effect the proper coupling of the antenna to the output stage.

Antenna, Ground and Power Source

The antenna consists of a 47cm long metal antenna. There is no external ground connection. The ground is only that of the printed circuit board. Electric current is supplied by a 9 Volt ("6F22" size battery x 1) primary battery.

Operation Descriptions

The transmitter is a toy car operating at 49.86MHz band. The transmitter is powered by a 9Vd.c. battery (6F22) and the transmitting frequency is crystal controlled. There are two joystick to control the forward reverse motor and director of movement. The operation is achieved by different combinations of form pulse modulating signal on the 49.86 carrier frequency.

Remarks:

The transmitter is a 2 Joystick transmitter.

The EUT continues to transmit while Joystick is being pressed.

It is Pulse transmitter, Modulation by IC; and type is Pulse modulation.
