Application No.: <u>HM155196</u>

Date: 14 October 2005

FCC ID: TPC68AT27MHZ

Circuit Description

The $\underline{27.145}$ MHz crystal oscillator drives the base of $\underline{Q4}$ the final/buffer amplifier. The modulation provided by \underline{IC} . The output of $\underline{Q4}$ has the matching network consisting of $\underline{L6}$ and $\underline{C5}$ that limit the harmonic content and effect the proper coupling of the antenna to the output stage.

Antenna, Ground and Power Source

The antenna consists of a <u>85cm</u> long metal antenna. There is no external ground connection. The ground is only that of the printed circuit board. Electric current is supplied by a <u>9 Volt ("AA" size battery x 6)</u> primary battery.

Operation Descriptions

The transmitter is a <u>toy car</u> operating at $\underline{27.145}$ MHz band. The transmitter is powered by a $\underline{9}$ Volt battery ($\underline{AA \times 6}$) and the transmitting frequency is crystal controlled. There are $\underline{2}$ <u>joystick</u> to control the forward reverse motor and director of movement. The operation is achieved by different combinations of form pulse modulating signal on the $\underline{27.145}$ MHz carrier frequency.

Remarks:

The transmitter is a 2 Joystick transmitter.

The EUT continues to transmit while <u>Joystick</u> is being pressed.

It is <u>Pulse</u> transmitter, Modulation by<u>IC</u>; and type is <u>Pulse</u> modulation.
