
Declaration of Compliance to FCC CFR Part 2, Section 2.1091
Radiofrequency radiation exposure evaluation: mobile devices

The Icoms radar control equipment used for traffic control is a mobile device. It operates at a frequency of 24.125 GHz with an ERP of 0.355 watts and remains separated from humans by at least 20 cm.

The device is exempt from RF evaluation because of an operating frequency greater than 1.5GHz and an ERP less than 3 watts (sec. 2.1091 (c)).
