

Dear Tim,

hi~

our client reply is list below:

About FCC regulation, we understand 12, 13 channel is not allow to use in United States, that's why we design this device support country list, the control firmware will be writed/determined on EEprom when produce, firmware will based on following countries definations,

WCM300C Notebook (with sleep mode function, full channel)  
WCM300U Notebook (with sleep mode function, US)  
WCM300E Notebook (with sleep mode function, EU)  
WCM310C ADSL (without sleep mode function, full channel)  
WCM310U ADSL (without sleep mode function, US)  
WCM310E ADSL (without sleep mode function, EU)

The way to modify support county list are discribed at "User's Manual Integrated Manufacturing Tool"(DO-405793-TC-T.pdf). Pls refer to attached "DO-405793-TC-T.pdf" page.43

And you can refer to DO-408009-ST-15.xls for countries string.

(See attached file: DO-408009-ST-15.xls)(See attached file: DO-405793-TC-5.pdf)

As conclusion, country support will be determined when production. User can't control that anyway.

If you need declare letter by client, please let me know.

Should you need further information or have any questions, feel free to let me know.

Thank you.

Looking forward to hearing from you soon.

Best Regards,
