

28 February 2007

To whom it may concern,

We the undersigned, seek FCC and IC approval of a Class II Permissive Change for our Speedway RFID Reader, Impinj model number IPJ-R1000. The reason for the Class II change is the addition of three new antennas meant to operate with the reader. The reader operation, block diagram, schematics, label, equipment name, and photographs are unchanged. However, the nature of this change necessitates the need for RF testing to verify that the reader remains regulatory compliant.

The following antennas have been tested and added to the Speedway RFID Reader User Manual.

IPJ-A0301-USA	Mini-Guardrail Antenna
IPJ-A0400-USA, CS-777-2	Brickyard Antenna
IPJ-A0401-USA	Guardwall Antenna

The reader certification information is below.

FCC certification number: TWYIPJR1000
IC certification number: 6324A-IPJR1000

Sincerely,

Vince Moretti
