Justification of Labeling

Module FCC ID: TX2-RTL8822CE

Host model name: P157G、P158G、P159G、P117F

The label exhibit of this FCC filing showed the location of the label on the inside of the D cover. According to section 4 in KDB 784748 D01, as an option to placing the FCC label on the exterior of the device, the FCC label may be placed in a user accessible area if the following conditions are met:

Requirement	Justification
The device is handheld (notebook computers are considered as handheld);	It's for Dell's notebook
The FCC identifier is visible at the time of purchase. Marketing the device without the battery installed when the label is in the battery compartment is acceptable. The FCC ID on the box, or additional documentation directing the user where to find the FCC label, also satisfies this requirement;	We provide additional documentation (Warranty, Safety, and Regulatory Information) directing the user where to find the FCC label and meet the requirement. Please refer to Warranty, Safety, and Regulatory Information, and you will find following description. **Location of Radio Regulatory Labels for some portable computers, the radio regulatory labels may be found either in the battery compartment, or under the bottom access panel.**
The user accessible area must not require any special tools for access, and the FCC label must not be placed on a removable part;	The access panel where the labels are affixed to is a functional panel because it must be on the notebook for the notebook to function; therefore, it is not considered a "removable" part. Also, the Philip screw driver is not a special tool.
The FCC ID, Model Number, or FCC logo must be on the label and must meet all general labelling requirements or policies that apply for Certification, Verification or DoC.	Dell meets all general labeling requirements.
