SAR Test Exclusion Thresholds for 100 MHz – 6 GHz and ≤ 50 mm

Approximate SAR Test Exclusion Power Thresholds at Selected Frequencies and Test Separation Distances are illustrated in the following Table. The equation and threshold in 4.3.1 must be applied to determine SAR test exclusion.

Note: 10-g Extremity SAR Test Exclusion Power Thresholds are 2.5 times higher than the 1-g *SAR Test Exclusion Thresholds* indicated above. These thresholds do not apply, by extrapolation or other means, to occupational exposure limits.

The module will be integrated into hosts used at a distance of at least 35 mm from the human body.

Maximum output power measured for 2.4 GHz is 43.652 mW. For 5 GHz it is 42.658 mW. Therefore, the host integrating this module is exempted from SAR as per KDB 447498 D01 General RF Exposure Guidance v06.
