### Operation Description

The Transmitter Module AM9901C is powered by Alfaplus' proprietary transmitter RFIC ARF2481S, receiver RFIC ARF2461C and AWA9901L wireless digital audio processor IC. Operating in the 2.4GHz license free ISM band, AM9901C has incorporated features such as forward error correction, antenna diversity and scheme for higher interference resistance. AM9901C's digital transmission is more robust and offers much better audio quality than traditional analog wireless audio transmitters making it the ideal solution for wireless audio applications.
