**Worldwide Regulatory Approvals Experts**

To Whom It May Concern:

Ohio Willow Wood is applying for a Class II Permissive Change to FCC ID U3V6221020. The original Limited Modular Approval of the Ohio Willow Wood Radio Module (Model 621020 V1.1X) contained the following statement:

*“According to the applicant the device [EUT] will always be powered by a device deriving power from a battery, therefore AC line conducted testing is not required.”*

This implies that the module's status of approval is conditional upon limiting it's installation to battery powered devices. That condition of implementation must be removed from the Limited Modular Approval. Please find attached a test report demonstrating AC line conducted emissions, a Form 731, and a Setup Photo.

Sincerely,

Evan Gould
