Worldwide Regulatory Approvals Experts

To Whom It May Concern:

Ohio Willow Wood is applying for a Class II Permissive Change to FCC ID U3V6221020. The previous Class II Permissive Change of the Ohio Willow Wood Radio Module (Model 621020 V1.1X) contained a ferrite emission suppressor.

This implies that the module's status of approval is conditional upon limiting it's installation to AC powered devices with a ferrite emission suppressor. That condition of implementation must be removed from the Limited Modular Approval. Please find attached a test report demonstrating AC line conducted emissions, a Form 731, and a Setup Photo.

Sincerely,

Kyle Neffendorf
