Description Of Changes for Permissive Change Request

FCC IDS: U4A-YRD622BLEV1

To Whom It May Concern:

The ASSA ABLOY ACCENTRA NTC Models have been updated. On the main PCB that is on the secure side of the door, the HID Secure Element Processor U10 has been replaced with part number SEL551000000. This new processor has 3 times the memory and twice the key storage space. Additional existing and new protocols can now be supported. The Secure Element Processor enhances security with a device and technology-independent layer of additional security, on top of device specific security, acting as a digital data wrapper for additional key diversification, authentication, and encryption.

Additionally on the main PCB the voltage regulator U13 was added, footprint variant U12-1 was added, and voice IC U9 was replaced.

On the front PCB (unsecured side of door) there were no changes.

Existing part number has changed.

Old Number	New Number	Description	FCC ID
YRC622	NTC623-ACC	-Added the Lever to Basic Model	U4A-YRD622BLEV1

Sincerely,
