## Professional installation justification

(Regarding FCC ID: U8ONET960CE)

1. Micronet LTD. developing, manufacturing & Marketing Mobile Data Terminals (MDT), which designed to install only in vehicles.
2. Basically, this family is a platform that contains only operation system which can not works without software application.  
Our terminal is always a part of a full system - it does not ready to use "of the shelf".
3. We sell the platform only to distributors who need to provide a full navigation system to end user for industrial or commercial use. This take place after a distributor gets a development kit in order to develop the software application and to fit our terminal to his system.  
The distributors responsible for the software application and for the installation in the end user vehicles.
4. The installation is made by a permanent supplier which the distributor authorizes to install the full system he provides to the end user, inclusive our terminal, according to our installation guide.

Best Regards
