### **REPLY TO TCB COMMENTS**

The UMTS and EDGE mode are not used in the US, so we need to modify any document?  
Attached please find the operation description.

### **TCB COMMENTS**

The different operating modes should be mentioned in the Operational Description. I think it is not required to change the manual, if UMTS 2100 is not used in the US. However, if 2100 MHz UMTS is used for US operations, it should be tested. The module report shows that the card also supports UMTS 850 and 1900.
