

## Compliance with 47 CFR 15.247(i)

*“Systems operating under the provisions of this section shall be operated in a manner that ensures that the public is not exposed to radio frequency energy levels in excess of the Commission's guidelines. See § 1.1307(b)(1) of this chapter.”*

The EUT is a 2.4 GHz transceiver. The antenna is a  $\frac{1}{2}$  wavelength dipole antenna with a maximum gain of +2 dBi gain. The maximum peak conducted output power is 0.92 mW.

The maximum peak power is 1.46 mW (EIRP) for FCC ID: UA3-ATR20107-1. The single transmit frequency is 2440 MHz, therefore the EUT does not require routine SAR evaluation per “TCB Exclusions List”, footnote 3 (dated July 17, 2002). See below:

The exposure category is “General Population”. The distance is < 2.5 cm. Therefore the “Low Threshold” is 24.5 mW (EIRP) – above which routine SAR evaluation would be required. Since the maximum peak power of the EUT is 1.46 mW (EIRP), routine SAR evaluation is not required.

The applicant’s 2.4 GHz transceiver, FCC ID: UA3-ATR20107-1, is compliant with the requirements of 15.247(i).
