User Manual

Manual version : V 1.3

This smart phone is an intelligentized product for communicating that based on Windows.

To obtain the best performance of your phone, please read carefully this user manual.

The phone is equipped with an integrated computer operation system, which includes daily office and entertainment software and tools. It will bring great convenience for your business work and enrich your off-hours.

Since this product provides with the similar features and use methods of the computer, we advise you to use it in your customs of using the computer. Please pay attention to the following aspects when using this product:

- In order to use the product in a secure and legal way, please read the statements in the chapter of "Safety Precautions" carefully.
- Before the first use, please charge the battery by using the accessory charger. The charging time needs 8 to 10 hours. The new battery will reach its best performance after two or three times full charge/discharge cycles.
- Similar to the computer, enough memory will guarantee the system running with a great speed and efficiency. By restarting the phone, you could completely clear the system memory to resume the system to its best status.
- Running too many programs at the same time will affect the responding speed of the system. Therefore, please try to avoid this situation occurred. If the above situation has caused the

system responding slowly, please restarting the phone to resume to its best status.

- If the contents of the User Manual are not consistent with the product, please take the standards of the phone.
- Some services or functions identified in the user manual might not be supported by all the networks. Please contact the network operators or service providers directly if any functions or services are unclear.

 **Note:** The User Manual is published by [Paragon Wireless](#), which has the rights to correct the print or description errors, modify the contents about phone functions improvement and techniques update in the manual. We feel sorry that you will not be notified about these modifications. The User Manual will not be served for the purpose of service guaranty.

Welcome to use Paragon Wireless smart mobile phone

1. Side keys

Short press up/down key to turn up/down the volume.

Long press side up key to enter the shortcut list.

Long press side down key to enter Notepad.

Press Side keys to mute the ring tone of an incoming call.

2. Left soft key and Right soft key.

Carry out the corresponding function in left/right corner at the bottom of the screen.

3. Home key

Press it to return directly to main screen.

4. Talk key

Press it to originate/answer a phone call.

Answer another incoming call when there is one already on hold.

Switch between two calls in process.

Enable Hold with it while answering/Calling.

Enter Call history in a non-call status.

5. Navigation keys/Ok key

Select line by line the Menu items

Press OK key to confirm your selection.

6. Shoot key

Start Camera whatever interface you are in.

7. Back/Delete

Back to previous screen or delete an element before.

8. Power key

Long press it to power on/off your phone.

Hang up a call in process.

A. T-FLASH Slot

T-FLASH card is inserted in the slot.

B. USB cable/Charger/Earphone socket

Use USB cable to synchronize data from the phone to the other storage devices and you can as well charge your phone via this slot or plug in earpiece.

C. Infrared interface

Transfer data with other infrared devices via Infrared interface.

1. Security information

To use your phone securely and effectively please read carefully the following precautions before operating your device.

1.1 Exposure to Radio Frequency (RF) Signals

Your wireless phone is a radio transmitter and receiver. It is designed and manufactured not to exceed the emission limits for exposure to radio frequency (RF) energy set by the Federal Communications Commission of the U.S. Government. These limits are part of comprehensive guidelines and establish permitted levels of RF energy for the general population.

1.2 Precautions while taking with your phone

Please ensure to keep a distance at least 2.5cm from your phone to your body when you are using it. Please install accessories that provided or authorized by us otherwise it may exceed the upper limit of radio leakage prescribed.

1.3 Compatibility of radio frequency interference

Your phone may cause interference to electronic devices without a well-designed shield or those whose radio compatibility has not yet configured.

1.4 In public

Please power off your phone in public where there regulation posted out there. These public places includes: Hospitals, Health resorts or other hospitalization places.

1.5 SAFETY IN AIRCRAFT

When you are on board or nearby an airplane, please power off your phone and remove the batteries. Using mobile phone on board an airplane can cause interference to an aircraft's navigation system and network. In most countries it is against the law to use this product on board an airplane.

1.6 Pacemakers

The Health Industry Manufacturers Association recommends that a minimum separation of six inches be maintained between a handheld wireless phone and a pacemaker to avoid potential interference with the pacemaker. These recommendations are consistent with the independent

research by and recommendations of Wireless Technology Research. Persons with pacemakers:

- Should always keep the phone more than six inches from their pacemaker when the phone is turned ON.
- Should not carry the phone in a breast pocket.
- Should use the ear opposite the pacemaker to minimize the potential for interference. If you have any reason to suspect that interference is taking place, turn your phone OFF immediately.

1.7 Hearing Aids

Some digital wireless phones may interfere with some hearing aids. In the event of such interference, you may want to consult your service provider, or call the customer service line to discuss alternatives.

1.8 Other Medical Devices

If you use any other personal medical device, consult the manufacturer of your device to determine if they are adequately shielded from external RF energy. Your physician may be able to assist you in obtaining this information. Turn your phone OFF in health care facilities when any regulations posted in these areas instruct you to do so.

Hospitals or health care facilities may be using equipment that could be sensitive to external RF energy.

1.9 Road Safety

Vehicle drivers in motion permitted to use handheld telephony services, in emergency. In some countries, using devices as an alternative is allowed.

1.10 Explosive Atmospheres

When in any area with a potentially explosive atmosphere or where flammable materials exist, the product should be turned off and the user should obey all signs and instructions. Sparks in such areas could cause an explosion or fire resulting in bodily injury or even death. Users are advised not to use the equipment at refueling points such as service or gas stations, and are reminded of the need to observe restrictions on the use of radio equipment in fuel depots,

chemical plants, or where blasting operations are in progress. Areas with a potentially explosive atmosphere are often, but not always, clearly marked. These include fueling areas, below deck on boats, fuel or chemical transfer or storage facilities, and areas where the air contains chemicals or particles, such as grain, dust, or metal powders.

1.11 Batteries

Any contact of exposing electrodes of batteries with conductor such as jewellery or keys may cause lost in possessions or bodily injury.

1.12 Electromagnetic radiation

Your phone completely complies with the standard related to wireless irradiation enacted by the authority of the state and International Health Association. These limiting standards are parts of comprehensive rules and constitute public wireless irradiation permission standards. These standards are developed and formed after a long-term intensive scientific research by independent scientific organizations such as ICNIRP (International Commission on Non-ionizing Radiation Protection). These limiting standards contain a large surplus to insure the safety of all of the people, no matter and take the variable factor of various measurement conditions in consideration.

1.13 Other precautions

The phone comprises precise electronic circuits, magnets and battery system, to handle it, please be careful, especially of the following main points:

- Keep the phone and its accessories away from liquid or humid environment.
- Keep the phone away from an environment too high or too low in temperature.
- Do not let a metal object (such as a coin or a key chain), which may result in a short circuit, to contact the phone.
- The vibration function of the phone may move the phone, so do not put the phone near a flame or a lit cigar or cigarette.
- Do not scrawl on the phone.
- Prevent the phone from falling off or any other rude knocking.
- Keep the phone away from the computer magnetic disk, credit card, traveling card, or other magnetic objects, otherwise the message stored in the magnetic disk or credit card may

be affected.

- Do not place you phone or battery in an environment exceeding 60°C, for example, on an automobile panel, window, or behind a glass plate irradiated by the sunshine.
- Please do not take out the phone battery in a switching-on state.
- Do not throw the battery in a fire.
- Do not keep the phone battery in the mouth, since that the electrolyte swallowed down may poison you. If an error operation is taken for careless, please contact the doctor as soon as possible.
- Do not attempt to disassembly the phone or the other accessories.
- The built-in battery in the phone can only be changed by a professional service engineer. If it is displaced with a battery of an error type, an explosion may arise. Be sure to handle the used battery according to the induction of the producer.
- It may has a potential danger to use any one of battery, charger, vehicle-type charger (optional) or seat-type charger (optional) not designated by the producer.
- The headphone may generate heat, and the phone may also generate heat when being charged.
- Only wet or electricity-proof cloth may be used to wipe the phone. Please do not use a dry or a charged cloth to wipe the phone. Please do not use a chemical reagent or a cleanser containing abrasive sand; otherwise the shell may be damaged.
- Please do not keep the state of having no battery in the battery compartment or outage; otherwise some data may be initialized.
- The metal material contained in the phone may cause you in hyper susceptibility, which depends on your physique or health status.
- Since that parts such as liquid crystal display and pick-up head belong to fragile parts, please carefully keep them such that the phone may not be impacted or squeezed.
- The flash lamp should not be closed to your or other's eyes.

2. Overview of your phone

2.1 Installing the SIM card

Follow these steps to install a GSM SIM (Subscriber Identity Module) card provided by your local network service provider. The SIM card contains your phone number, service details, and phonebook/message memory. Your device supports both 1.8V and 3V SIM card. Some legacy SIM cards will not function within this device. The customer should consult with their service provider for a replacement SIM card. There may be fees for this service

1. Make sure your device is turned off. Slide the cover latch to remove the battery cover.
2. Pull the plastic ribbon to remove the battery. Then, insert the SIM card into the SIM card slot with its gold contacts facing down (the cut-off corner of the SIM card should match the cut-off corner in the slot).
3. Replace the battery and gently push down to snap it into place. When the battery is placed, please note the root part of the plastic ribbon should be under the battery, and the end part should be laid on top of the battery.
4. Replace the battery cover.

Setting Up Your Smart phone

In this section you will learn how to install battery, SIM card, T-Flash Card, and how to charge the battery.

Installing the SIM Card:

The SIM (Subscriber Identification Module) card contains a computer chip that stores your personal number, phone book, and other services provided by your cellular service provider.

To insert a SIM card:

1. Press on the battery release latch and move the backside cover downward to open.
2. Remove the battery by lifting it up from both sides of the bottom end.
3. Lift up the SIM metal socket.
4. Insert the SIM card with the gold-plated contact area on the card facing down. Push the metal socket down to lock into place.

PIN and PUK code

PIN code

PIN means Personal Identification Number, which is provided accompanying with the SIM card. You can prevent other people from using your SIM card without your permission, by using the PIN protection function provided by the phone. After enable the function of PIN protection, you need to input the PIN each time when you turn on your phone. If you continuously input error PIN for three times, the SIM card will be locked automatically. Any people cannot view the data of the SIM card or use its functions.

PUK code

When the SIM card is locked, only PUK (PIN Unblocking Key) number can unlock it. If you continuously input the wrong PUK number for ten times, the SIM card will be locked permanently. Usually, PUK is provided accompanying with the SIM card. If you lost your PUK number or the PUK number did not be provided accompanying with the SIM card, please contact your network operator.

2.2 Installing the T-Flash Card

Use only the T-FLASH (Secure Digital) card in your Smart phone. You can install the T-Flash Card to store images, video clips, music and other data on your phone.

To insert a T-Flash Card:

1. Follow the instructions on the previous page for removing the back cover and battery.
2. Slide the T-Flash Card into the holder, with the gold-plated contact area facing down.
3. Push the card down and slide the metal latch over the T-Flash Card to secure it into place.

2.3 Battery information

2.3.1 Installing the Battery

1. Insert the battery by aligning the exposed copper part of the battery pack with the protruding copper conductor, and then gently push the bottom of the battery into place.
2. Slide the cover on the phone.

2.3.2 Charging the Battery

When the power of the battery is below the normal value of working electronic pressure, the screen will display a charging notice and an empty battery icon. At the same time, the battery

Formatiert: Schriftart: 12 pt

Formatiert: Schriftart: 12 pt

will make a notice sound. Please charge the battery immediately; otherwise, the saved information might be lost. If you do not charge the battery or replace the battery immediately, the phone will be closed automatically after a while.

The phone contains a rechargeable lithium battery. The phone is designed to use only manufacturer-specified original chargers and batteries, to secure the longevity of service of the phone.

- Plugging the charger plug into the USB charger port carefully.
- If charging in the switch-off status of the phone, connect the USB charger to the external power source, and the battery icon in the phone screen will begin flickering and the phone still can be used. If charging in the switch-on status of the phone, the display screen will show a notice of "charging now".
- Before the first use, please charge the battery by using the accessory charger. The charging time needs 8 to 10 hours. The new battery will reach its best performance after two or three times full charge/discharge cycles.
- When the battery finishes the charging process, the battery indicator icon will stop flickering. If the phone is switched off, the display screen will show a notice "Charging is completed!"
- Disconnect the connections between the charger and the phone.

⚠Note: The accessory USB data cable has the charging function too in connecting the phone and the computer. However, because the voltage provided by the USB port of the computer cannot meet the charging requirements of the phone completely, using USB data cable to charge the battery will affect the longevity of the battery. We advise you to charge the battery by using the battery charger.

2.4 Power on/off

Press Power key for several seconds you can power on/off your phone. System will prompt alert on screen when no SIM card installed.

2.5 initial interface display

Power on your phone, after the start animation, it will enter initial interface. (namely standby

Formatiert: Schriftart: 16 pt

interface).

Note: Icons within this manual are only for reference use for function explanations. Some of the icons introduced may not be exactly the same like those displaying on your phone. please just follow it.

2.5.1 Indicator bar

In status bar system display by various indicators current working status, including battery, signal, GPRS, and many other indicators. They are illustrated as follows:

- | | |
|-----------------------------|---------------------------|
| The max signal strength | Call is diverted |
| Phone is turned off | MSN instant message |
| The battery is full charged | Missed call |
| Battery power is very low | Unread message |
| Battery power is used up. | New voice message |
| Battery charging | GPRS is enabled |
| Call in progress | Synchronization errors |
| Sound on | No SIM card |
| Mute | Data transfer in progress |
| Call on hold | |

2.5.2 Shortcut bar

In Shortcut bar five shortcut keys to respective functions are lined up here from which by navigation keys can you select and run these programs.

2.5.3 Information indicators

In information indicators area some relative information are distributed, including name of internet service operator, current time and date, recent appointments and reminders, scene mode status and new message prompt.

2.5.4 Soft key bar

The command at soft key bar is in accordance with current menu function which can be performed by LSK and RSK.

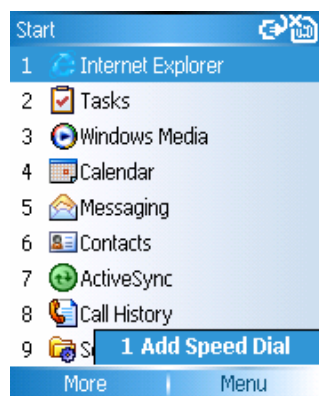

2.5.5 Start Menu

Start menu lies in left corner at the bottom, press LSK to open up Menu options. All functions are listed on Start Menu

2.6 Speed dial

On main Menu screen, press RSK to select "Add speed dial" from Menu in which you can assign keys to speed dials. After setting up successfully, you will be able to deploy them conveniently.

Prompt you can press * and # on Start screen to turn the pages.

(图需要换)

2.7 Lock and Unlock

While the phone is on, long press power to lock the keypad. Press LSK then * key to unlock it.

3. Basic functions

3.1 Making a Call

The phone provides with varieties of methods to making a call for your convenience.

3.1.1 Making a call from the Home screen

When in the Home screen, press the numbers on the keypad to enter the phone number, and then press the Talk button to make the call. Press the Back button if you need to backspace over a digit. As you enter a phone number, your phone searches Contacts, Call History, Speed Dial lists, and your SIM card, to find a matching number. Matching names and numbers will be displayed. When you see the name of the person you want to call (or the entire number) displayed, select it and press the Talk button.

In this example, the first few digits of a phone number have been entered. The names listed in this screen have all been found to have phone numbers that start with these digits. At this point, you can select the desired name without bothering to enter more numbers.

3.1.2 Making a call from Contacts

To make a call by Contact name:

In the Home screen, press the Right Soft key ("Contacts") or select Contacts from the Start Menu. If there are many contacts listed, you can enter the first few letters of the desired contact's name to perform a search. Select the name you want to call and press the Talk button. The phone number that has been specified as the default phone number for that contact entry will be dialed.

To change the default number for a Contact:

In the Home screen, press the Right Soft key ("Contacts") or select Contacts from the Start Menu. Select the contact whose default phone number you want to change, then press the Right or Left navigational button to change the default number. The abbreviation at the right side of the list indicates the default number. For example, if you change "w" to "m," the default number changes from Work phone (w) to Mobile phone (m).

To make a call from an open Contact card:

In the Home screen, press the Right Soft key ("Contacts") or select Contacts from the Start Menu. Select the desired contact, then press the Action button to display all the information for

that contact. Select the number you want to call, then press the Talk button.

For more information about Contact list abbreviations and Contact cards, please see Chapter 8.

3.1.3 Making a call using a recently dialed number

When in the Home screen, press the Talk button to display a list of recently-dialed names/numbers. Select the item you want to dial, and then press the Talk button again.

3.1.4 Making a call from the Call History list

Select Call History from the Start Menu. Select the number or name you want to call, then press the Talk button.

3.1.5 Making a call from a hyperlink

When you see an underlined phone number presented as a hyperlink in an E-mail message, just scroll to it, and press the Action button to make the call.

3.1.6 Making emergency calls

Calls to emergency service numbers can be made under any circumstances, even if you have locked the SIM card and/or your phone. To place an emergency call: Dial the emergency number appropriate for your location, and press the Talk button.

3.2 Receiving a call

3.2.1 Receiving a Call

When you receive a call, the name and number of the caller are displayed on the screen. If the name of the caller is not in your Contacts list, only the caller's phone number is displayed.

You can answer a call by pressing the Talk button or the Left soft key ("Answer").

If don't want to take the call, press the Right soft key ("Ignore"). Note that selecting Ignore will connect the caller to your voice mail box, if you subscribe to this service.

This is the default behavior for incoming calls. See the next section if you want a Photo ID (which you have associated with the caller) to be displayed on your screen during incoming calls.

When there a call is coming (See figure below), you can press Send or LSK to receive it, or press Power or RSK to Ignore it.

(图需要换)

When your phone is plugged with earphone and you enable earphone mode in Profiles, it will auto-receive an incoming call right after a short while then you can answer it with the earphone

⚠ **Note:** If any key answer enabled in Settings>Phone>Dial up settings, you can answer an incoming call by pressing any key in addition to Send key.

3.2.2 Answering a second call using Call Waiting

If you are already talking on the phone when you receive another call, the Call Waiting screen will appear. To place the current call on hold and answer the incoming call, press the Left Soft key ("Answer") or the Talk button to simultaneously place the first call on hold and answer the second call. If you want to end the first call before answering the incoming call, press the End button, and then press the Answer soft key or the Talk button to Answer the incoming call.

3.2.3 Ignoring a Call on call waiting screen

If you are already talking on the phone when you receive another call and you don't want to answer the incoming call, press the Right Soft key ("Ignore") in the Call Waiting screen. This will keep your current call in progress, but will connect the "call waiting" '63aller to your voice mail box, if you subscribe to this service.

3.3 Functions during a call

When on communication, you can synchronously do other operations by opening up Menu on RSK.

⚠ **Note:** Whether the functions listed on Menu can be utilized depends on whether ISP has

provided it, or whether you have applied it.

3.3.1 Holding a call

During a call, select Hold from Menu to prevent communicators from hearing each other's voices. This call is not yet hung up till you select resume to go on with it.

During a call, you can input and call another number. In that case the former call will be automatically saved (See the figure below). After the last one get connected, you can press LSK to switch between the two. But only the one you switch to can hear you.

3.3.2 Mute

If you would like to shut up speaker for a while during a call, you can select Mute from Menu to make it and, you can resume the call by pressing no mute from Menu. When the speaker is muted, only you can hear the voice from the other side.

3.3.3 Speakerphone On

Turn on the speaker then it will help lift the voice from this side for you to listen clearly within noisy surroundings.

3.3.4 Conference call

Conference call is supported. Please refer to [sitting a call conference](#) for details

3.3.5 Contacts

During a call (or a conference call), select contacts from Menu and then you can view details of contacts or do other operations.

3.3.6 Viewing Calendar

You can look into Calendar.

3.3.7 Call History

Here you can enter Call history records to view or operate on them.

3.4 Dealing with several calls

System will prompt you if another call comes in while you are already in process of a call. You can choose to answer or Ignore it. If you choose to answer it, you will be able to switch between 2 calls or you can merge one into the other or merge two calls into the 3rd one to make a three-party conference call in which anyone speaks the other two hear. Conference call consists of six members at most.

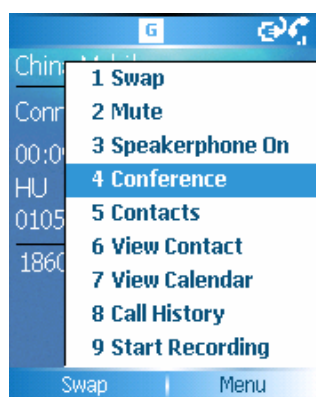

Whether you can use this function depends on whether ISP provides it or whether you have applied it.

3.4.1 Switching a call

If another call is coming during a call, you can press LSK to receive it and the former one will be auto-paused and isn't hung up yet nevertheless he can not hear the conversation between you and the last one. Now you can select Switch to talk in turn to one person respectively in which the one not in the conversation will be auto-held, and can't hear. If you hang up currently call in its process, the held call will be released automatically from held status. You can select Hang up all to hang up both the two calls.

3.4.2 Sitting a call conference

It supports you to sit a call conference which includes at most 6 members besides you in which the other 5 person can all hear one's voice.

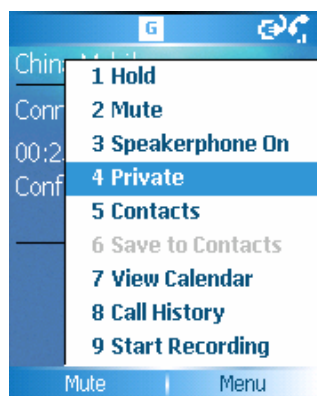

Steps for sitting a call conference

When a call gets connected, answer or call another;

After are connected, select Conference from Menu and currently processing call and call on hold are put together to form a conference. By same means you can add more conference members.

If you need to converse with a certain member in a conference, you can select Split from Menu (See the figure below), then all members in this session will be listed on the screen for you to select to talk separately. Now the conference call is held nevertheless other members can communicate with each other all the same. After your separate conversation, you can press OK to return to the Call conference.

During a conference call, press Power key to end the whole conference.

3.5 Net Call

3.6 ActiveSync

3.6.1 Using ActiveSync

When you connect your phone to PC with a USB cable, with Microsoft® ActiveSync® Synchronizing data on your computer with that on PC is available. ActiveSync will auto-compare data on PC and your phone to check if synchronization is available.

Gelöscht: Text input method

Gelöscht: It supports various text input method handy and quick to fit other functions. It supports both Chinese and English, numeric mode and other input methods. In text field, short press * to switch input method, long press * to pop up input method bar at soft key bar. You can select a common one by pressing navigation keys or number keys.¶

3.5.1 Pinyin input method¶

In text field, short press * to switch to Pinyin.¶
When inputting Pinyin, press sequentially the keys which includes the letters of the collocation you want, but all possible associative characters will appear at the bottom, now by navigation left and right can you select the collocation you wanted; press Navigation down to characters corresponding to pinyin. press OK on focused character or press the number key that corresponds the number before it can you input this word in text field.¶

¶

¶

3.5.2 Intelligent English input method¶

In text field, short press * to switch to En.¶
When inputting English, press sequentially the keys which includes the letters of the word you want, but all possible associative words will appear at the bottom, now press OK then Navigation keys to move forward to the next word.¶

3.6.2 Installing ActiveSync

There ActiveSync has already be built in that, you only have to install same applications on PC.

You can use the companion CD that came with your phone to install ActiveSync on PC.

3.6.3 Synchronizing data with PC

In default mode, contacts, schedule and other tasks in MS Outlook will be all copied to phone.

thus you can view all information on your phone comparably as you can on PC.

4. Internet Explorer (need to same with Chinese version)

Pocket Internet Explorer

Using Pocket Internet Explorer (IE), you can browse the World Wide Web on your Smart phone. Pocket IE supports HTML Hypertext Markup Language), cHTML (compact Hypertext Markup Language), xHTML, WML 2.0, and WAP (Wireless Application Protocol). It also supports JScript, ActiveX controls, and CSS (cascading style sheets). The browser supports images and sounds, but it does not support frames on a Web page.

To connect your smart phone to network with IE, you need to:

- Make sure that your SIM does support it, or if you are not so clear if it supports, please consult your ISO for information.
- Please apply to start or order Data operating services or GPRS services from the ISO;
- Correctly set up IE on your phone.

Note Whether you can get access to WAP depends on whether ISO have provided it, and whether you did enable it.

Please consult your ISO for detailed information.

4.1 Starting Internet Explorer

- The first time you do this, a default list of Favorites should appear.
- If you select one and then press the Action button or the Left Soft key ("Go"), IE will open that web page.

- You can also select Address bar on Menu where you can enter a website you'd like to browse and then press LSK (Go), system will connect to open it.
- While browsing Websites, you can back to a just browsed page by pressing Back.
- If you want to quit browsing, you can press Power key to disconnect from Internet and exit the browser.

4.2 Offline menu

When offline, you can select following items on Menu:

Address bar- you can enter a Website you'd like to browse.

Add Favorite- you can add in Favorites a new Webpage link, including its name, address and the name of the folder it is saved to.

Add Folder- you can create folders in Favorites to make it easy and convenient to manage miscellaneous websites.

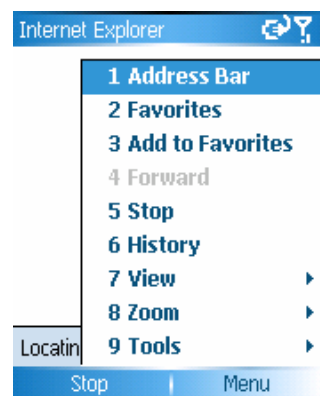

Edit- Edit a website address.

Delete- delete a record on focus.

Options- here you can set up the browser, please refer to Setting up Internet Explorer.

4.3 Online menu

When the browser is online, you can press RSK to select following items on Menu:

Address bar- you can enter a Website you'd like to browse.

Favorites- you can save all your favorite pages here.

Add to favorites- you can add in Favorites a new Webpage link, including its name, address and the name of the folder it is saved to.

Forward- go forward to next page in recently-visited web pages.

Refresh-reload the current page.

History- Recently-visited pages are stored here from which can you select one to visit.

View- you can select a view mode of browsing pages

Zoom- you can select a resolution for displaying web pages.

Tools- In tools (See the figure below) you can send the link address of the web page you are browsing to others by mail, you can also view the properties of the current page, or set up the browser. To set up the browser, please refer to [Setting Internet Explorer](#)

4.4 Setting up Internet Explorer

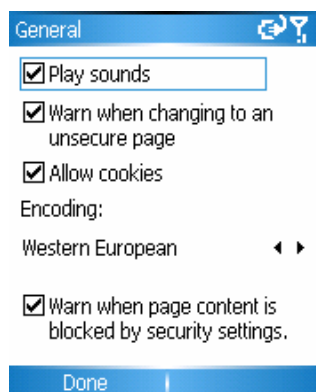

从 Internet Explorer 浏览器的 [菜单](#) 中选择 [选项](#) 功能，可以进行浏览器的设置。 ([改成英文](#))

Select Functions from Menu in Internet Explorer to set up IE.

4.4.1 General

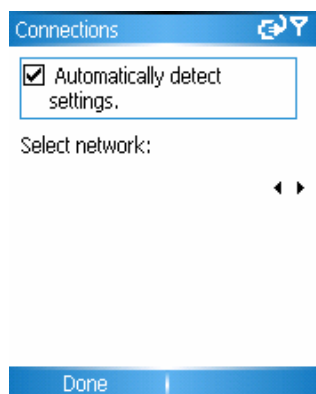

Select **Options** from the menu, then select either General,

4.4.2 Connections

Enter Connections from Options (See the figure below) and you can change the way it connects to Internet.

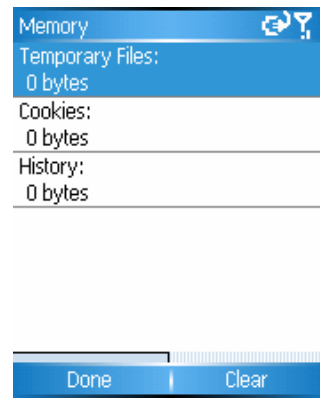

Using Auto-detect settings, system will auto-select proper way of connecting according to the web site.

4.4.3 Memory

Entering Memory (See figure below) in Options, you can view memory status of network.

Press RSK to clean out temporary files, Cookies and History record.

8.6.6 Loading messages from SIM

Gelöscht: 5

By this function you can load SMS on SIM from Inbox.

9. Contacts

Contacts are like an online address book where you can store information about people and businesses you communicate with regularly. For example, you can store multiple phone numbers, E-mail and street addresses, Web pages, birthday, anniversary date, etc. You can use Contacts to dial phone numbers and compose E-mail and SMS messages directly from the "contact card." The Contacts list

The Contacts list displays the names of your contacts alphabetically, along with an abbreviation for the default communication method, such as the person's work phone number (w) or home phone number (h). This makes it easy to reach the contact using the method you prefer. Note that if the contact entry includes a work phone number, your Smart phone will automatically set it as the default number.

9.1 View contact's information

Enter [Contact](#), all contacts both saved on SIM and phone are listed here.

- All contacts are arranged alphabetically, the contacts saved on the phone are ranked before those saved on SIM card.

- The types of contacts' numbers are identified by letters, e.g.

If default number is a work number, it will display "w" at rear;

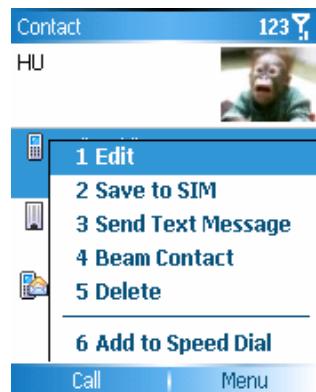

If it is a home number then display H at rear. And those saved on SIM card only be displayed as a SIM Icon.

- Move highlight bar to focus on a contact, press OK to view details.

9.2 Modifying contact's information

When you need to modify on a contact, you can enter the detailed information, then press RSK to open up Menu and Select Edit to modify on it.

9.3 Creating a contact

On Contact list screen, press LSK Create (See the figure below), you can set up a new record of contact on the phone. Fill in the blanks item by item then press LSK to complete setup. This newly set up record will be added in contact list.

If it is an extension number or an International call number that you input, before you go on to dial the extension or the latter number, you might need to pause for a while after dialing the main number. In that case you can select [Insert pause](#) from [Menu](#) to insert pause P between main number and extension number. If you want to extent pause time longer, you can insert more P in between.

If you need to manually dial the sequent number, you can select Insert wait from Menu.

You can add contact from a communication object, a message/Email sender and Call History.

9.4 Creating a contact in SIM

If you need to create a record of a contact on SIM, you can press RSK on Contact list screen, Select Create a SIM contact from Menu to make it.

Generally, record saved on SIM card can only record contact's name and his unique number which depends on the types and function of SIM. Please consult Internet service operator for details.

9.5 Creating a speed dial to a contact

You can assign a 1-2-digit quick number to a number saved on you phone that is frequently in touch with. Then when you are to dial this specified number, you only have to long press its quick number (if it's a 2-digit one, just short press the tense digit then long press the latter) then it will connect to the corresponding number you want.

9.6 Finding a contact

On contact list screen, you can find a contact by means as follows:

- Press Navigation up/down key to find;
- Press Num keys, system will query all records relative (For example the elements including letters and a number on a Num key match the first letter or number of a contact).
- If you want to find a record on SIM card, just input its SIM password and system will find it.

💡 **Note** When you press Num keys to find, to those contacts recorded on your phone, system only compares whether the default number is consistent with that you input.

9.7 Beaming contacts

You can send contacts to others via infrared connection.

How to: at Contact list, select Beam contacts from Menu, aim the infrared interface on your phone to other receiving devices, then press Beam to start transferring.

9.8 Copying contacts between SIM card and Phone

You can inter-copy contact's details between SIM and Phone.

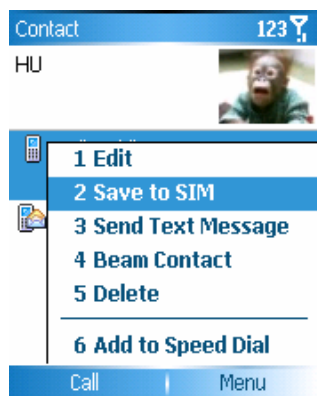

9.8.1 Copying SIM contacts to Phone

Enter details of SIM contacts, select Save to contacts. System will ask you if to save as new contact or add in other records. If you select to save as new, it will enter new contacts details for you to fill in the blank name and phone type, press LSK to insert the number.

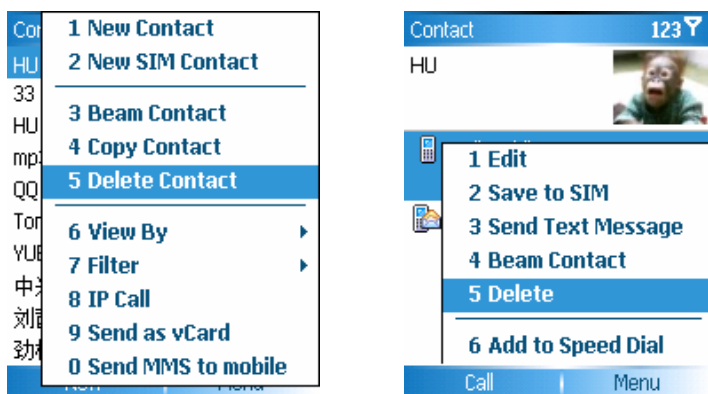

9.8.2 Copying Phone contact to SIM card

As only one phone number can you save onto SIM card, you have to select one from phone numbers in details of a phone contact and system will require you to confirm the name and number of SIM contact. Press LSK to complete copy.

9.9 Deleting contacts

You can delete contacts both on contacts list and contact details screen.

10. ActiveSync

Before synchronization can begin, you must install ActiveSync 3.7 or above on your desktop or notebook PC. Use the Companion CD that came with your device, or install ActiveSync for free by downloading the software from Microsoft's web site at <http://www.microsoft.com/windowsmobile>. ActiveSync is already installed on your phone.

10.1 Using ActiveSync

10.1.1 Synchronize with the computer

- After install the ActiveSync software in the computer, using USB cable to connect the phone and the computer.
- Create the cooperation relationship between the phone and the computer followed by the instructions, and set the synchronization contents. The synchronization process will start automatically when the instructions have finished. The information of Outlook contacts, schedules, tasks, emails, etc will be synchronized to the phone.
- In the ActiveSync function screen, select "Synchronization" to start the synchronization process; and select "Stop" to end the synchronization process.

Note: In the default status, ActiveSync will not synchronize all information of Outlook. It will be realized only after the relative options have been set.

10.1.2 ActiveSync Server

Before synchronizing information with a server, make sure all the requested server authentication information such as username, password, and the name of the Microsoft Mobile Information Server are correct.

To set up ActiveSync Server:

On ActiveSync screen, on Menu, select Option-Server settings-Connect.

In User name, enter your Microsoft Exchange user name.

In Password, enter your Microsoft Exchange password.

In Domain, enter the name of the domain of your Exchange server (if required).

In "Server name" enter the name of mobile information server you want to connect to.

1. Press "OK" to finish setup, press the Start soft key to synchronize.

Note After a partnership has been set up between phone and PC, a far-distance connection to the server also can be available.

10.2 Synchronizing information

10.2.1 Synchronizing inbox

- When you synchronize the mails stored in the inbox of the computer or stored on the server, the system only synchronizes the mails received in the most recent three days, and only synchronizes the initial 500 bytes for each mail. If you hope to view all contents of the mail, you need to download the completed mail.
- The mails stored in the phone and in the computer are synchronized. If you delete an email in the phone or in the computer, the phone or the computer will delete this email automatically in the next synchronization process.
- To synchronize the other files in Outlook and mails in the customized directories, you need to select and highlight these directories in the phone.

⚠Attention: SMS and MMS cannot be synchronized.

10.2.2 Synchronizing the schedules

- You can synchronize schedules stored in the phone with those stored in Outlook, or Mobile Information Server 2002, even higher versions of the computer.
- In the default mode, only the schedules in the past two weeks and the future schedules will be synchronized.

10.2.3 Synchronize the contacts

- Synchronize all contacts in the default mode.
- Once the synchronization process is accomplished, the contacts records newly created or deleted from the phone or the computer will be correspondingly created or deleted from the computer or the phone.

10.2.4 Install software to the phone

You can install software to the phone by using ActiveSync function in the computer. The instructions are:

- Build a connection between the phone and the computer by using ActiveSync.

- Run setup file in the computer.
- Select the setup location in the phone and begin to install the software. If the Memory card has been inserted into the phone, the system will notice you to choose the storage location.

11. Call history

It can record information such as phone number or call time of dialed calls, answered calls and missed calls.

Call history list is shown after entering Call history. Different icons are assigned to identify different record types. The indications correspond to icons as follows:

Dialed calls

Answered calls

Missed calls

Note Assume that a number within an call record in Call history is one that already stored in contact list, then it will be displayed as its corresponding name, or only its number will be displayed.

11.1 Viewing Call history

In call history list, move focus onto an record you want to view, press OK to view details.

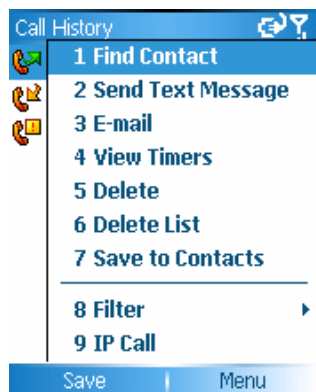

11.2 Saving number

In Call history list, move focus onto an item you want to save. Press LSK to save it. Enter information of the contact and this number is saved to contacts.

11.3 Finding contact

If you want to view other information of a contact in call history, you can make it by selecting Find contact on Menu. If no number or name matches in there, it will give a prompt.

11.4 Viewing timers

With Timer you can view the accumulative time of last call, all calls, answered calls, outgoing calls, calls while roaming and data calls.

Select Reset timer from Menu to clear out all time record, all items of time start to record over again except for "current accumulative time"

11.5 Deleting list

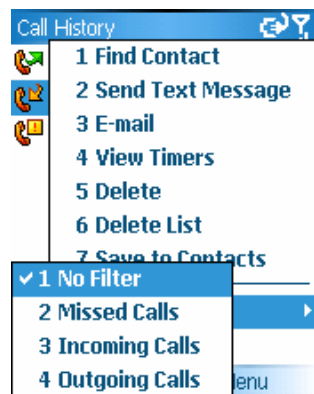

On call record list screen, select Delete from Menu to delete focused record, select Delete List to delete the whole record list.

11.6 Filter

In call record list you can view various types of call record

By Sort.

Select Sort on Menu and then you can screen record of missed call, answered call or dialed call out of all record list.

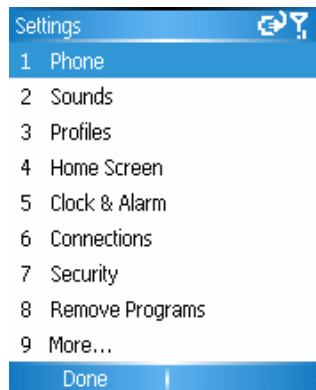

12. Settings

In Settings you can make changes to system.

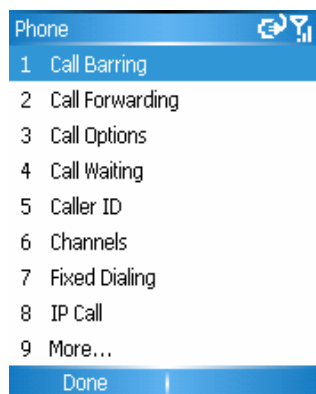

Enter Settings on Main menu screen to initial interface of it.

Select More to go to the next slide.

12.1 Phone

Select Phone from initial page of Settings to set up it.

12.1.1 Call barring

You can bar selectively incoming calls or outgoing calls in accordance with different conditions.

Restrict numbers are required before every time you utilize it. To use this function, you need a restrict password acquired from Service Provider.

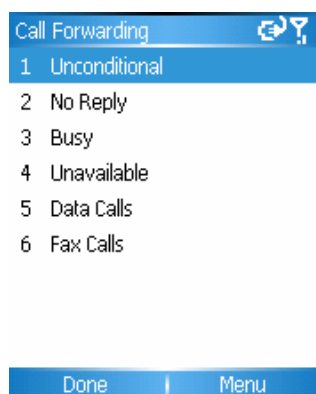

Note: If continually a incorrect restrict password is input for 3 times, Call barring function will be locked up and can't be used no more.

Prompt: Call barring functions needs network support; it may not work because it may be affected by network which disables it to work.

12.1.2 Call forwarding

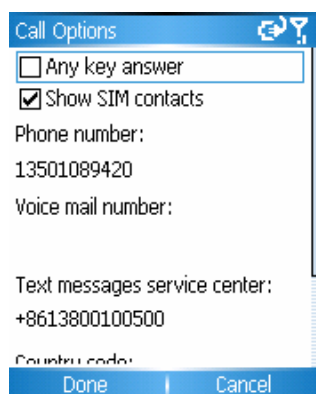

When your phone can not get connected with or you are not will to receive call from certain number, you can divert such calls to other phones.

 Note: This function requires network support and has been applied. Please consult your ISP for details.

12.1.3 Call options

In Dial-up option, you can determine to/not to use any key answer; display contacts saved on SIM card in contact list and set numbers of Voicemail and SMS center.

12.1.4 Call waiting

You can enable/disable Call waiting to choose to/not to prompt on the screen there is another call coming in while you're communicating with someone.

12.1.5 Caller ID

You can determine to/not to hide phone number, show you number to anyone or only show it to those contacts on your phone.

12.1.6 Channel

Using this function you can receive a broadcast information list with whose languages can also be set.

Note this function requires support from your ISP.

12.1.7 Fixed dialing

Here you can determine to/not to use fix dial-up function.

A screenshot of the 'Fixed Dialing' settings screen. At the top, there is a blue header bar with the text 'Fixed Dialing' and a small icon of a phone with a question mark. Below the header, there is a checkbox labeled 'Enable fixed dialing'. The checkbox is currently unchecked.

Done | Menu

Note: This function needs support from ISP.

12.1.8 IP call settings

Here you can set IP code that once you choose to dial a number by means of IP, find IP call on Menu and dial the original number, then you can add IP code ahead of the number you are to dial.

A screenshot of the 'IP Call' settings screen. At the top, there is a blue header bar with the text 'IP Call' and a small icon of a phone with a question mark.

Hint 1: The default value is '17951', you can modify the value:

17951

Hint 2: The default phone type of 'Contacts' is 'Mobile Phone', you can modify the type:

Mobile Phone

Done | Cancel

12.1.9 Network

In this option you can either view name of current network in use, or set the way system choose network, or search the network.

Note: not all of the functions above are supported by any network, if you are not sure whether the network you're using supports these functions, please consult the ISP.

12.2 WiFi

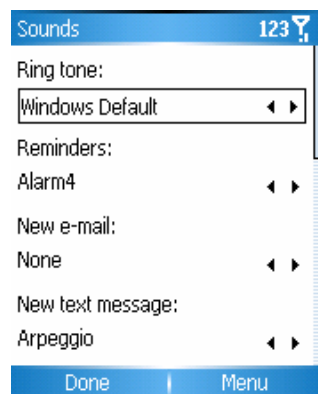

Formatiert: Schriftart: Fett

12.3 VPN

12.4 Sounds

Gelöscht: 2

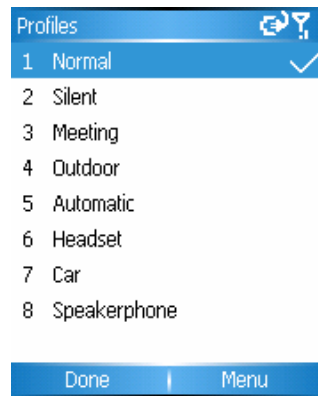

Select Sound on initial page of Settings to enter system sound settings screen. According to your personal favor you can change the way it prompt the arrival of all sound-concerned events.

17. Camera

17.1 Cautions in using Camera

- The camera on your phone is produced and assembled with superior, high precision technologies. However, there might be bright or dim dots or lines not easy to dispose. You should also pay attention that, when you shoot pictures in a place within dim light, the amount of impurities (e.g. white lines, etc.) may increase as well.
- Fingerprints or grease sticking to the lens may result in problems such as difficulties in focusing or obscurations of pictures so, before taking pictures, you should mop the lens clean with lens tissue.
- Qualities of pictures taken with the camera on your phone which probably have been long time placed in areas with higher temperature may be discounted.
- Long-time exposure to sunlight can change colors of built-in color filter of the camera which leads to color changes on pictures.
- Try not to shake your phone while shooting pictures. When shooting pictures, hold it firm to your best to keep it still, any motions of your phone may lead to the obscurations of pictures.
- If you are aiming directly at the lamp-house (The sun e.g.) to shoot, picture qualities will get affected.
- Pictures taken and stored on your phone are prohibited to be used for other purpose which may cause violation to restrictions by law on copyright. Note that some as well apply to pictures-shooting restrictions to mise en scene, entertainment and exhibitions etc. even if all these pictures are purely for personal use.
- Be sure that pictures protected by law are permitted to be transmitted only within the media regulated by copyright law.
- Please be aware of protecting others' privacy while shooting pictures with your phone.

17.2 Shooting pictures

Either Pressing shoot key or enter Camera module from main menu can start camera up. In the middle of screen it will display scenery captured by the lens and now both OK key and Shoot key can shoot picture. The taken pictures will be saved automatically by system.

25 Maintenance Manual

If you have problems in using this phone, please contact the dealer or refer to the Repair Center specified. If your phone needs to be repaired, you may send it to the local maintenance spot (see the certificate of three guarantees equipped with the phone for specific repair network); if there is no local maintenance spot, please deliver your phone and copy of purchasing invoice to the dealer for mailing of EMS.

Your phone is a product of superior design and craftsmanship which should be treated with care. Following guidelines may help you follow the warranty obligations in terms of Maintenance Clauses which can extend the useful life of your phone.

- Keep the phone and all its parts and accessories away from kids.
- Keep the phone dry. Precipitation, humidity and liquids that may contain minerals will corrode electronic circuits within.
- Do not use or store the phone in dusty areas as knock-down components may be damaged.
- Do not store the phone in hot areas. High temperatures can shorten the life of electronic devices, damage batteries and warp or melt certain plastics.
- Do not store the phone in cold areas, otherwise moisture can form inside the phone when temperature of the phone arises (to normal temperature), which may damage the electronic circuits.
- Do not attempt to disassemble the phone's casing. Non-expert handling of the phone may cause damage to it.
- Do not drop, knock or shake the phone or the internal circuits may be damaged.
- Do not clean it with strong chemical products, detergents or strong scours.
- Do not use paints to daub the phone, which may block sundries inside the knock-down components and affect the normal operation.

All above-mentioned guidelines are comparably suitable for your phone, batteries, charger and fittings. If those parts can not work normally, please send it to the nearest qualified repair institution.
