

Explain the Difference Between the Model RFS2212 and RFS2214 :

The model RFS2212 has two antennas, the model RFS2214 has four antennas.

The 2 antenna model RFS2212 and the 4 antenna model RFS2214 are electrically identical .

The antenna switch chip in both models can support 4 antennas , however, the switch chip will be used to support only 2 antennas for the RFS2212 .

The antennas do not work simultaneously, only one antenna can read or write at one time.

It is very short for the time space between one antenna working and another antenna working .
