

Circuit Description of transmitter

Description of circuit:

The brief circuit description is listed as follow:

1. CPU U1 act as the whole system control.
2. Sensor U2 used to gather temperature , humidity signal.
3. Wireless transmission U3 used to send the data to control.

Remark: This device transmits signal periodically when operation. Time for each transmission of the device is 0.1 second and the silent time is 30 minutes between transmissions.
