

In

Dear Tim,

The 3rd one, thanks.

- 1) We have corrected the 731form in the attachment;
- 2) We have remove the band of 5150-5250 MHz, and update the test report, manual, RF exposure, Operational Description and 731 form in the attachment;
- 3) We have been corrected the User Manual in the attachment;
- 4) The ZA-5000-I can only run as 802.11a, because manufacturer have been designed for 802.11a using the Internal Software, you can refer to the user manual of Page 15 for "wireless Mode: 11a only";
- 5) We have been corrected the Operational Description in the attachment;
- 6) The User Manual have been corrected the Gain Values for 6 dBi;
- 7) We have been retest the radiation emission test data and the new test setup photograph have been in the attachment;
- 8) We have tested the three channel and update the report in the attachment;
- 9) We retest the the conducted Band Edge and update the test report in the attachment;
- 10) We corrected by User Manual of Page 9;
- 11) We have been corrected the user manual;

best regards,  
Jewel
