

RF circuit diagram description

IR wireless camera transmit the signals to the A/D converter MI360, and MI360 convert the analog signals to digital signals, then send the digital signals to DSP processor vc0702T. DSP processor will make digital signals to video signals and send them to wireless RF module TM103I-E with 8Mhz crystal, the video signals will be modulated and enlarged, and then the antenna will send the signals out.
