

### 无线鼠标线路描述 ( Wireless Mouse Circuit Description ) :

光电 IC 将 Mouse 的位移信息通过处理, 进行编码, 并将编码后的信号通过 27MHZ 的负  
载波再利用天线发射出去.

Mouse's frequency will be automatically adjusted to pair with Receiver's after 2 pcs AAA  
rechargeable batteries was loaded and the ID button pressed. When Users move the Mouse, the  
operation (moving) signal is processed & converted to RF signal in 27.045MHZ by the controller  
IC ATA1168, then transmitted out through the antenna.
