Columbia, Maryland 21046

Subject: FCC ID:UPO302-0007 Class II permissive change

To whom it may concern

The Zinwave 3000 DAS is a wideband system capable of carrying a number of different services across a wide frequency band.

This class II permissive change has been made following customer request to use the equipment in bands not already covered by the initial certification package. No hardware or software changes have been required to offer this additional functionality as it was already inherent in the design.

Additional testing has been performed for each frequency band and emissions designator in line with previous test plans.

Yours Sincerely

A handwritten signature in blue ink, appearing to read 'C Blackham', is shown on a light-colored rectangular background.
