

Test Report

Product Name : CDMA 800Mhz Dual Band
Selective Repeater
Model No : L800RDBS
FCC ID :

Applicant : Longent, LLC

Address : 2112 Duskywing Drive Raleigh, NC 27613

Date of Receipt : 2006/11/09

Issued Date : 2006/11/10

Report No. : 06BL044-HP-US-P04V01

The test results relate only to the samples tested.

The test report shall not be reproduced except in full without the written approval of Quietek Corporation.

This report must not be used to claim product endorsement by NVLAP any agency of the U.S. Government.

Test Report Certification

Issued Date: 2006/11/10

Report No.:06AL075-HP-US-P10V01

Accredited by NIST (NVLAP)

NVLAP Lab Code: 200533-0

Product Name : CDMA 800Mhz Dual Band Selective Repeater
Applicant : Longent, LLC
Address : 2112 Duskywing Drive Raleigh, NC 27613
Manufacturer : Beijing Telstone Technology Co., Ltd.
Model No. : L800RDBS
Rated Voltage : AC 120V/60Hz
Trade Name : Classic
Measurement Standard : FCC CFR Title 47 Part2 22
Measurement Reference : TIA/EIA 603-A
Test Result : Complied

Test results relate only to the samples tested.

The test report shall not be reproduced except in full without the written approval of Quietek Corporation.

This report must not be used to claim product endorsement by NVLAP any agency of the U.S. Government.

1. GENERAL INFORMATION

1.1. EUT Description

Product Name	: CDMA 800Mhz Dual Band Selective Repeater
Trade Name	: Longent
Model No.	: L800RDBS
TX Frequency	: 824.73MHz ~ 848.19MHz(CDMA)
RX Frequency	: 869.73MHz ~ 893.19MHz(CDMA)
FCC ID	:
Antenna Type	: Fixed
Rated Voltage	: AC 120V/60Hz

1.2. Operational Description

The information contained within this report is intended to show verification of compliance of the CDMA 800MHz Repeater to the requirements of 47CFR2 and CFR 22.

The signal from the base station is received via the repeater donor (BS) antenna and is then forwarded through a directional coupler (DC). The signal passes a duplex filter (DPX), is amplified in a low noise amplifier (LNA), and enters the band selective amplifier (BSA), which has two parallel bands.

The first mixer stage on the BSA amplifier, which is controlled by a synthesizer, converts the received frequency down to the IF frequency. The signal is then filtered by a SAW band pass filter and amplified before it is fed to the second mixer stage, controlled by the same synthesizer as the previous one, for converting back to the original frequency. The SAW filter can be adjustable for each BSA has adjustable bandwidth.

A detector on the PA measures continuously the output level. The signal from this detector is used by the automatic level control, ALC, to supervise and, if necessary, reduce the output power to keep it under a setting level.

The output signal passes duplex filter (DPX) and fed to the repeater service (MS) antenna.

The uplink signal path, i.e. from the mobile station through the repeater to the base station, is identical to the downlink path the other way round. Only some levels and component values differ.

LNA Gain:50dB
 PA Gain:41dB
 SWA filter frequency Range:
 Down Link 869~894MHz
 Up Link 824~849MHz

Quietek has verified the construction and function in typical operation. All the test modes were carried out with the EUT in normal operation, which was shown in this test report and defined as:

Test Mode:	CDMA2000 (800MHz)
------------	-------------------

1.3. Configuration of tested System

(a) Block Diagram

(b) Configuration of measurement

1.4. EUT Setup Procedures

- (1) Setup the EUT and simulators as shown on 1.3
- (2) Turn on the power of all equipments.
- (3) The EUT was set to communicate with BS and MS.
- (4) Repeat the above procedure (3).

1.5. Test Facility

Ambient conditions in the laboratory:

Items	Required (IEC 68-1)	Actual
Temperature (°C)	15-35	20-35
Humidity (%RH)	25-75	50-65
Barometric pressure (mbar)	860-1060	950-1000

1.6. Type of Emission

1M25F9W

2. RF Power Output

2.1. Test Equipment

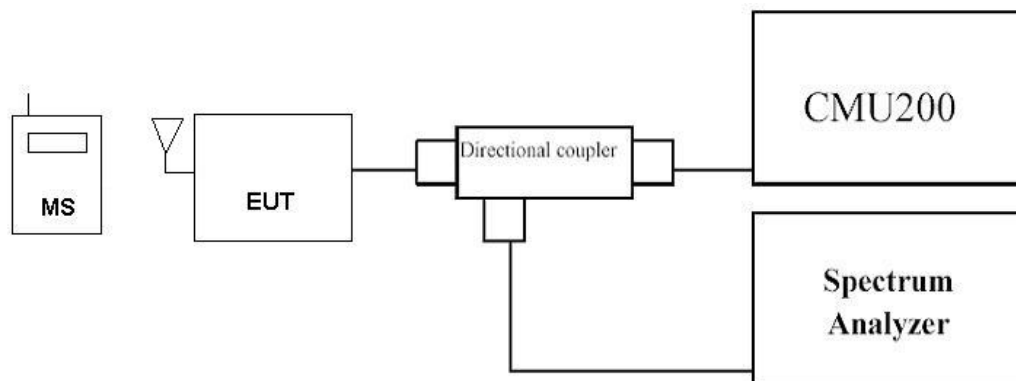

The following test equipments are used during the RF power output tests:

Equipment	Manufacturer	Model No./Serial No.	Last Cal.
Spectrum Analyzer	Advantest	R3182 / 100803470	May, 2006
Universal Radio Communication Tester	R & S	CMU200 / 104846	May, 2006
Directional coupler	Agilent	87300C/3239A01864	N/A
Directional coupler	Agilent	778D-012/50550	N/A

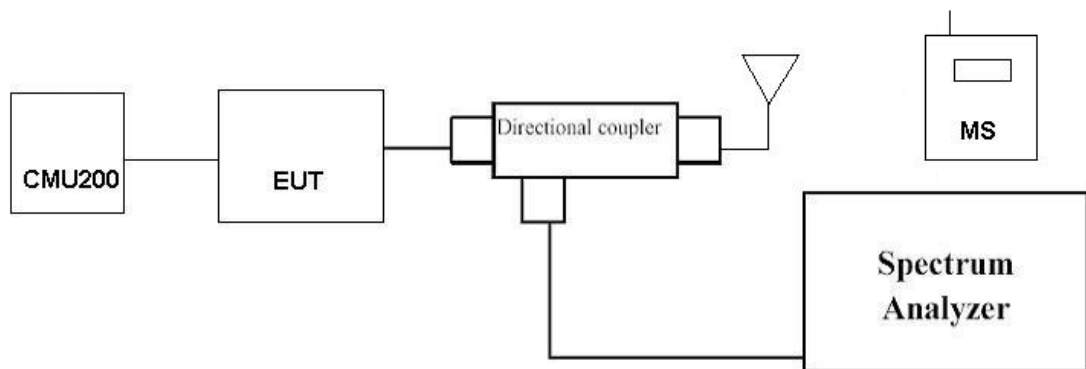

Note: All equipments upon which need to be calibrated are with calibration period of 1 year.

2.2. Test Setup

UPLINK

DOWNLINK

2.3. Limits

Limit	< 500 W ERP
-------	-------------

2.4. Test Procedure

As required by 47 CFR 2.1046, RF power output measurements were made at the RF output terminals using an attenuator and spectrum analyzer. This test was performed with carrier modulated by a CDMA, modulated signal.

The spectrum analyser RBW and VBW were set to 3MHz and the path loss measured and entered as a reference level offset.

Plots of the RF output Power level of the Digitally modulated carrier, as measured at the RF output of the signal generator and at the RF output terminals of the EUT appear on the following pages.

2.5. Test Specification

According to Part 2.1046, 22.913(a).

2.6. Test Result of RF Power Output

Product	CDMA 800Mhz Dual Band Selective Repeater

Date of Test	2006/11/08	Test Site	CB4
Test Condition	CDMA2000 (800Mhz)		

UPLINK

DOWNLINK

3. Occupied Bandwidth

3.1. Test Equipment

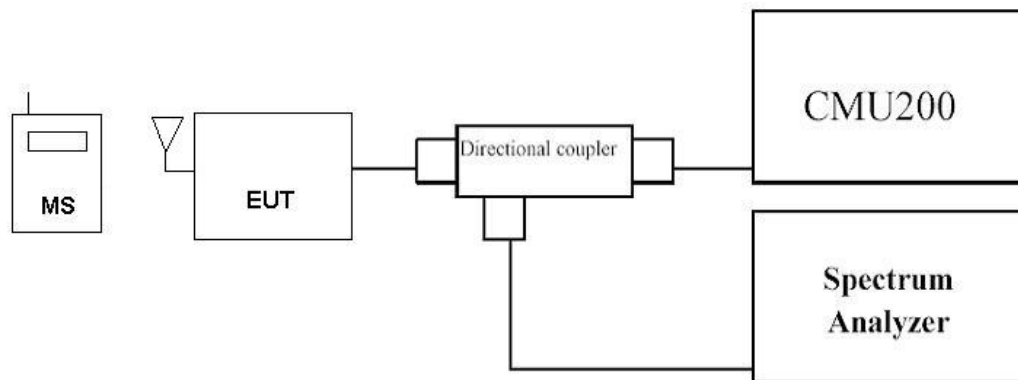

The following test equipments are used during the occupied bandwidth tests:

Equipment	Manufacturer	Model No./Serial No.	Last Cal.
Spectrum Analyzer	Advantest	R3182 / 100803470	May, 2006
Universal Radio Communication Tester	R & S	CMU200 / 104846	May, 2006
Directional coupler	Agilent	87300C/3239A01864	N/A
Directional coupler	Agilent	778D-012/50550	N/A

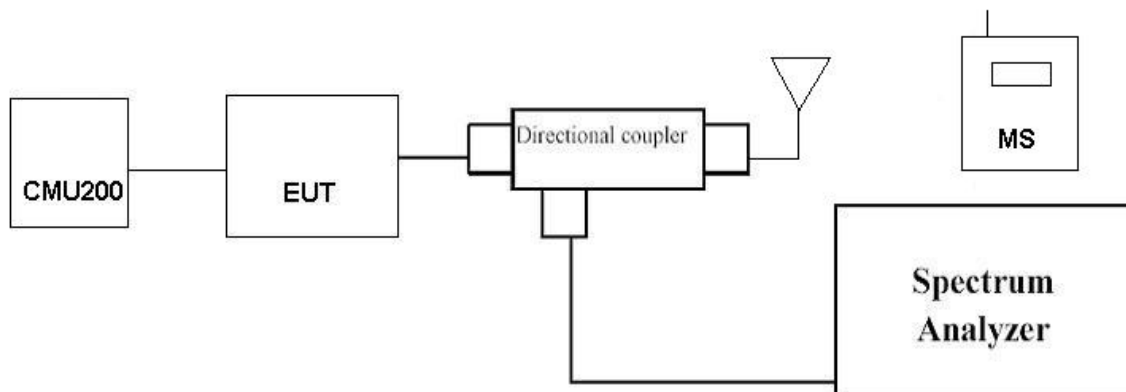

Note: All equipments upon which need to be calibrated are with calibration period of 1 year.

3.2. Test Setup

UPLINK

DOWNLINK

3.3. Test Procedure

➤CDMA2000

The EUT was set to transmit on maximum power, using a resolution bandwidth of 100kHz and a video bandwidth of 300kHz, the -26dBc points were established and the emission bandwidth determined.

The plots below show the resultant display from the Spectrum Analyser.

3.4. Test Specification

According to Part 2.1049, 22.917.

3.5. Test Result of Occupied Bandwidth

Product	CDMA 800Mhz Dual Band Selective Repeater		
Test Mode	Occupied Bandwidth

4. Spurious Emission At Antenna Terminals

4.1. Test Equipment

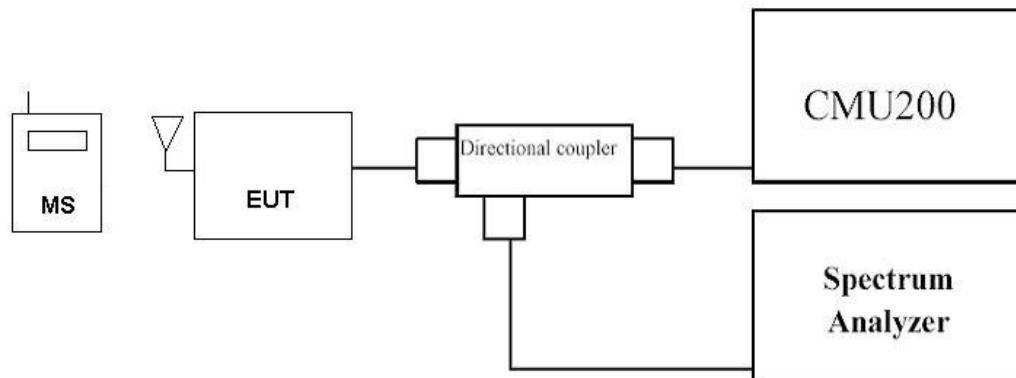

The following test equipments are used during the spurious emission test

Equipment	Manufacturer	Model No./Serial No.	Last Cal.
Spectrum Analyzer	Advantest	R3182 / 100803470	May, 2006
Universal Radio Communication Tester	R & S	CMU200 / 104846	May, 2006
Directional coupler	Agilent	87300C/3239A01864	N/A
Directional coupler	Agilent	778D-012/50550	N/A

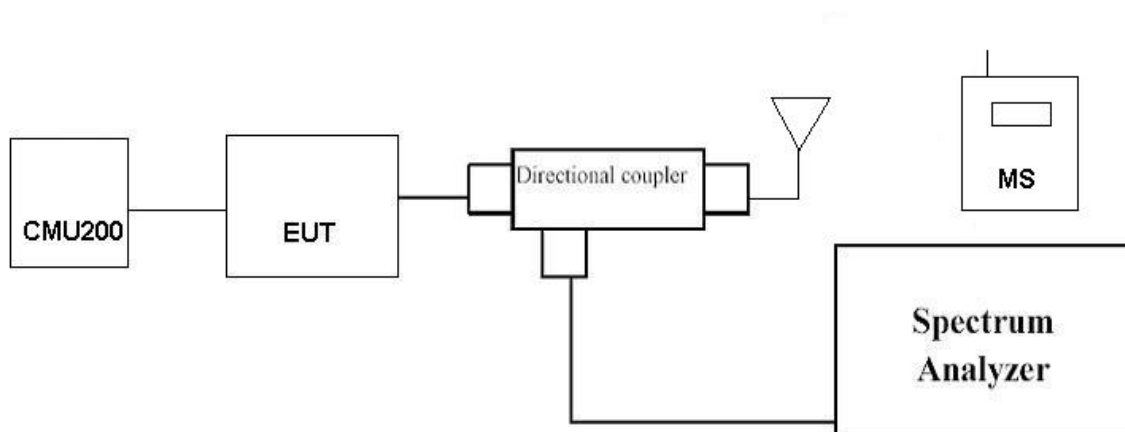

Note: All equipments upon which need to be calibrated are with calibration period of 1 year.

4.2. Setup

UPLINK

DOWNLINK

4.3. Limits

The mean power of emissions must be attenuated below the mean power of the unmodulated carrier on any frequency twice or more than twice the fundamental emission by at least $43 + 10 \log P$. This is equivalent to -13 dBm absolute power.

4.4. Test Procedure

As required by 47 CFR 2.1051, spurious emissions at antenna terminal measurements were made at the RF output terminals using an attenuator and spectrum analyzer set for a 30 kHz bandwidth. This test was performed with Digitally modulated carrier signals. The Digital signal generator was adjusted for continuous transmit on frequencies in both the uplink and downlink frequency bands. The frequency spectrum was investigated from 9.0 KHz to 9.0 GHz. For measuring emissions above 2 GHz, a high-pass filter was used to eliminate the fundamental transmit frequency to prevent possible saturation effects on the front end of the spectrum analyzer.

4.5. Test Specification

According to Part 2.1051, 22.917(e).

4.6. Spurious Emission At Antenna Terminals

Product	CDMA 800Mhz Dual Band Selective Repeater

5. Spurious Emission

5.1. Test Equipment

The following test equipments are used during the radiated emission test:

Test Site	Equipment	Manufacturer	Model No./Serial No.	Last Cal.
☒OATS 3	Test Receiver	R & S	ESCS 30 / 100122	Feb., 2006
	Universal Radio Communication Tester	R & S	CMU200 / 104846	May, 2006
	Spectrum Analyzer	Advantest	R3162 / 120300652	Feb., 2006
	Pre-Amplifier	QTK	QTK-AMP-03 / 0003	May, 2006
	Bilog Antenna	SCHAFFNER	CBL6112B / 2697	May, 2006
	Horn Antenna	ETS	3115 / 0005-6160	Jul., 2006
	Pre-Amplifier	QTK	QTK-AMP-01 / 0001	Jul., 2006

Note: 1. All equipments that need to be calibrated are with calibration period of 1 year.
2. Mark "X" test instruments are used to measure the final test results.

5.2. Test Setup

Field strength of spurious radiation.

5.3. Limits

Limit	<-13dBm
-------	---------

$43 + 10\log(P)$ down on the carrier where P is the power in Watts.

5.4. Test Procedure

In accordance with Part 2.1051, the spurious emissions from the antenna terminal were measured. The transmitter output power was attenuated using a combination of filters and attenuators and the frequency spectrum investigated from 9kHz to 10GHz. The EUT was set to transmit on full power. The resolution and video bandwidth was set to 1MHz in accordance with Part 22.917. The spectrum analyzer detector was set to Max Hold. In addition, measurements were made up to the 10th harmonic of the fundamental.

The EUT is placed on a turn table which is 1.5 meter above ground. The turn table can rotate 360 degrees to determine the position of the maximum emission level. The EUT was positioned such that the distance from antenna to the EUT was 3 meters. The antenna can move up and down between 1 meter and 4 meters to find out the maximum emission level.

Both horizontal and vertical polarization of the antenna are set on measurement. In order to find the maximum emission, all of the interface cables must be manipulated according to TIA/EIA 603-A on radiated measurement.

5.5. Test Specification

According to Part 2.1051, 2.1053, 22.917(a).

5.6. Test Result of Spurious Emission

Product	CDMA 800Mhz Dual Band Selective Repeater		
Test Mode	Spurious Emission		
Date of Test	2006/11/08	Test Site	No.3 OATS
Test Condition	CDMA2000 (800MHz)	Test Range	9KHz ~10GHz

Frequency	Reading Level	Signal Generator Level	Cable Loss	Antenna Gain	ERP Value	Limit
(MHz)	(dBm)	(dBm)	(dB)	(dBd)	(dBm)	(dBm)

Horizontal Emissions

1672.8	-45.78	-37.432416	1.41	9.8	-45.822416	-13
