

# V1010 2.4GHz User Manual

---

## Introduction

Thank you for your choice of V1010 digital cordless phone.

V1010 is a WDCT (Digital Enhanced Cordless Telecommunications) phone with answering machine system. To the quality of audio and to the safety offered from the digital technology, V1010 offers manifold and useful features including caller identification, call waiting, alphabetical phonebook, handsfree speakerphone, multi-handset capabilities and telephone auto answering feature. All the features are easily accessible through a practical menu.

Please read this instruction carefully before using your new V1010 phone for the first time.

### **Please check your package that included the following items:**

- Base Unit
- Hand Set (x1)
- AC / DC adaptor for Base Unit
- Telephone line for Base Unit
- Two handset batteries
- User manual

## Precautions

- Read this manual before using this phone.
- Avoid direct exposure to solar rays and/or fronts of heat, as well as to avoid the installation in damp places and/or dusty.
- Do not support objects on the cables and/or on the phone.
- Do not use adaptor and/or batteries diverged from those specified on this instructions manual or however from those in endowment.
- In case of storms, disconnect the phone from power and phone lines.
- Clean by using a slightly dampened cloth. Do not use alcohol, solvents, abrasives, etc.
- Do not effect reparations alone. Tampering and/or uses not in conformity with those described on the instructions manual will render the warranty void.
- (the ??? company) declines any responsibility in case of improper use or manipulations not conform with the instructions as described in this manual.

## LED / key features on Base Unit

## Installation

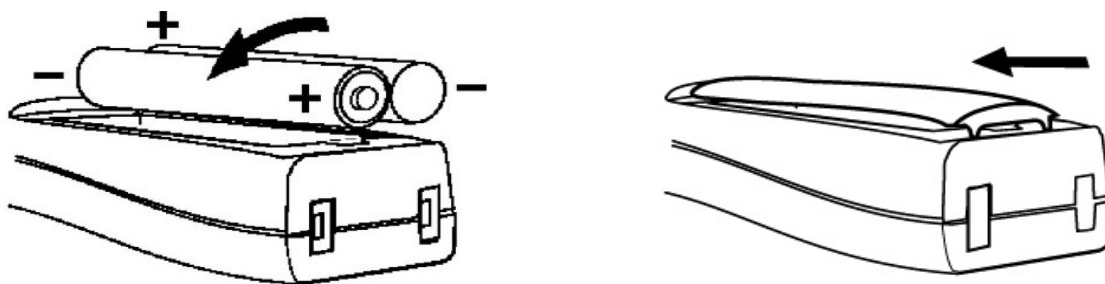

1. Choose a suitable site for the base unit, make sure it is not near to another telephone, nor to other electrical equipments.
2. Connect the AC adaptor socket to the Base Unit and to your room's power socket.
3. Connect the telephone line to the Base Unit and to your room's telephone socket.

## V1010 2.4GHz User Manual

---

### 4. Fitting the battery in the handset:

The two rechargeable batteries come with your phone.

- Insert the rechargeable battery into the handset as the above figure indicated, matching correct polarity (+, -)
- Fit the battery compartment cover by sliding it down so that it clicks firmly into place.

*NOTE: Reversing the orientation may damage the handset. Please use the battery type supplied or recommended equivalents. A different battery could cause an explosion or damage of your phone.*

---

### Charging the handset batteries

Before using the handset, charge the handset for at least 12 hours.

Whenever you see the battery icon on the LCD screen becomes nearly empty, or you have heard the low battery warning tone during a call conversation, please:

- End the call as soon as possible.
- Don't use the speakerphone mode for conservation since this may cause the handset power off.
- Put the handset into the cradle for charging until the battery icon returns to high level.

To charge the handset, put the handset into the base cradle with face-up. The charging LED on base unit will come on to indicated that the handset is in charging mode, and "Battery" icon in the LCD screen of handset will be moving.

### Battery level indication

After the handset's battery has fully charged, the battery icon  will display on the LCD screen.

According to the actual battery capacity the battery icon will be updated accordingly such as  =

MID,  = LOW, if the battery icon  has flash, you will need to put handset into the cradle for charging.

## Basic Functions

### Make an outgoing call

-Press  key or  key to get the dial tone

-Dial your number

You can also make an outgoing call using pre-dial mode.

-Pre-dialing your number, then press  or  key, the pre-dialed number will be dialed out automatically.

Also you can search the desired number from caller ID, redial list and phonebook, then press  or  key, the selected number will be called out automatically.

### Answer an incoming call

When an external call is incoming, handset will ring with the selected ringer tone of EXT RING, “Phone” icon  will flash on the LCD screen.

-Press  key;

-Or pressing  key (This will enable the speakerphone function)

During a call conversation, you can adjust the talk volume (1 ~ 5 levels) by simply pressing  or  key, the volume level will show about 5 seconds. Your V1010 phone uses two separate volume adjustment for handset and speakerphone mode.

### End a call

-Press  key

-Or simply put the handset into the cradle, your phone will hang up automatically (Auto standby feature)

The talk duration time will show about 5 seconds.

*Note: If you are in handset conversation mode, pressing  key to enable / disable the speakerphone mode, pressing  key you cannot drop the line, it will switch to the handset mode.*

### Close an incoming call

When an EXT / INT call is incoming, and you do not want to answer temporarily, press  key to close the incoming call that disturbs you.

### Mute

-During a call conversation, you can mute your voice by pressing  key, the LCD screen will display  icon so that you can talk freely without be heard by the caller party, and you still be able to hear the caller party.

-Deactivate the mute function, press  again.

### Dial the last redial number

Press  key, the LCD will display the last dialed number, then press  or  key, the last number will be dialed out.

### Dial one of 10 redial numbers

V1010 can save the last 10 dialed numbers. To redial one of them, press  key then  or  keys scroll through the redial number that you want to dial. Press  or  key, the selected number will be dialed out.

*Attention: the maximum length of redial record is 24 digits.*

### Delete a redial number

-Enter the redial list, press  key

-Scroll through the redial number that you want to delete and press  key

-Select **DELETE** and confirm

-The redial number is deleted with the confirmation tone, and the display returned to the redial list review mode. You can repeat the above steps to delete the other number.

### Delete all redial numbers

-Enter the redial list, press  key

-Select any redial number and press  key

-Select **DEL ALL** and confirm

-All redial numbers are deleted with the confirmation tone, and the display returned to the standby mode.

### Handset Power On / Off

To power Off the handset

- Press and hold  key about 3 seconds, the display of handset will switch off which can prolong the use time of handset.

To power On the handset

- Press  key
- Simply put handset into the cradle for charging

The handset will power on automatically with the **INITIALIZE** shown, then the display will return to the standby mode.

### Ring On/Off shortcut feature

At Standby mode, pressing and hold **Digit \*** key for 3 seconds to disable the ring function, **RING OFF** will be displayed. The ring volume will be set to **VOLUME 0** with the icon  shown.

To restore the ring feature, pressing and hold **Digit \*** key for 3 seconds again, **RING ON** will be displayed. The icon  will disappear that means the ring feature is restored to the last setting ring mode.

### Keypad lock

You can lock the keypad to prevent dial a number accidentally. When the keypad is locked, only the unlock operation is allowed, all the others are locked. Note that your V1010 phone still allows you to make an emergency call or answer an incoming call in the locked mode,

- Press and hold **Digit #** key for 3 seconds at standby mode, the LCD display shows  icon that means the keypad is locked. Press any keys except  key the LCD will show **PRESS OK + \***.

- Unlock the locked keypad, press  key and then press **Digit \*** key, the icon  will disappear that means the keypad is unlocked.

### Finding the handset(s)

This feature is useful if you don't remember where you put your handset(s). Make a paging call with the fixed melody ringer and the duration time of 60 seconds to find them.

- Press **Page** key on the base at standby mode
- The handset(s) located to this base will release the paging tone with the **PAGING** shown

## V1010 2.4GHz User Manual

---

- Press any key on the handset or press **Page** key on the base to terminate the paging call, you can also put the handset into the cradle simply.

### Caller ID (CLIP) feature

You V1010 phone shall have the ability to receive and display FSK type i/ii and DTMF categories caller ID message, please note that you have to subscribe the caller ID display service with your network operator. The caller ID information will include the following items:

- The calling name (max. 8 characters) if the network send it
- The calling number (max. 22 digits)
- The date and time that received this caller ID information

*Note: Date and time are available only on PSTN lines and not on ISDN lines.*

*The Caller ID entries are stored in the handset. Deletion of caller ID entries on one handset applies only to that handset and does not affect the other handsets registered to the same base unit.*

The place of calling number will display the special network message as following:

Message	Meanings
WITHHELD	The caller has hided their number
UNAVAILABLE	The caller's number is out of network area which is unavailable

*Note: The special network messages will only be displayed when receiving, they will not be saved into the caller ID list.*

### Call Waiting

If you have subscribed to both Caller ID and Call waiting service, when you are in a call and another call is incoming, you will hear a call waiting tone and display the calling name (if available) and number to notify you that another call is waiting. You can answer the second call without ending the first call.

-If you have received the call waiting tone during a call, press the  key, the first call will put on hold, then you can answer the second call. Switch between two calls, press the  key again.

-If you decide not to answer the waiting call, the caller's details (if available) will save into the caller ID list, these can be reviewed in a later time.

### Caller ID list

Your V1010 phone can save the last 20 recent caller ID messages. Each caller ID entry can be contained the calling name of the max. 8 characters and the calling number of the max 22 digits. When the caller ID list is full, a new caller ID entry will replace the oldest.

#### View the caller ID list,

- To access the caller ID list, press  key. The last caller ID message received will be displayed.
- Scroll through the different caller ID entry using  or  keys. If an external call has missed to answer, the icon  will flash until you have view the caller ID entry, the old caller ID entry will be marked with the icon  display steadily
- View the detail of each caller ID entry, press  key, the calling number will be display; press  key again, the date and time will be displayed.
- Press  key again, an option menu will be display that included **SAVE TO PB**, **DELETE** and **DEL ALL**, scroll through the different option using  or  keys

#### Save a caller ID entry into phonebook

- To access the caller ID list, press  key
- Scroll through the caller ID entry that you want to save
- Select **SAVE TO PB** and confirm
- Confirm the phonebook name, press  key
- Confirm the phonebook number, press  key

*Note: You can also restart to edit the phonebook name and number before confirm.*

#### Delete a caller ID entry

- Scroll through a caller ID entry that you want to delete
- Select **DELETE** and confirm
- The caller ID entry is deleted with the confirmation tone, and the display returned to the caller ID review mode

#### Delete all caller ID entries

- Select any caller ID entry
- Select **DEL ALL** and confirm
- All caller ID entries are deleted with the confirmation tone, and the display returned to the standby mode

### Call back a caller ID entry

- To enter the caller ID list, press  key
- Scroll through the caller ID entry that you want to call back
- Simply press  or  key, the caller ID entry will be dialed out. Even you are in the number or the date and time review mode

### Emergency Call setting

With emergency call you can dial a pre-programmed number by simply procedure, even the keypad is locked. Your handset can set 5 different numbers for the emergency call.

- Press   key, enter **EMERGENCY** call menu and confirm
- Select the different memory place (**MEM 1 ~ MEM 5**) and confirm
- Enter your number and confirm (max length of number is 18 digits).

### Make the emergency call

- Enter emergency call mode, press and hold   for 3 seconds, **MEM CALL** will display.
  - Press the corresponding key of memory place that you have saved the number previously.
  - Your phone will go off hook with the handset mode and will dial out the saved number automatically
- Note: When pressing the corresponding key of memory place, if you don't set any number previously, there will prompt you with **EMPTY** message, if you press the wrong key which is not in digit1 ~ digit5 key, it will prompt you with **WRONG NO** message.*

### Phonebook

Your handset can store up to 40 phonebook entries. You may enter manually name (maximum 8 characters) and the number (maximum 18 digits), or copy them from caller ID list.

If one calling number / or redial number has matched with one phone number in phonebook, the name match feature will be implemented and there will show the phonebook name.

*Note: name match feature will be implemented if matched with the last six digits only .*

### View the phonebook entry.

- Press   key
- Select **VIEW** and confirm
- View the saved entries by using  or  keys, if no any entry saved, there will prompt **EMPTY** message with the warning tone

## V1010 2.4GHz User Manual

-With the desired entry displayed, press  to view the number for this entry. Press  again to go back to the name.

*Note: When you viewing a name or a number, simply press  or  key to call back.*

### Add a new entry into phonebook.

-Press  **R** key

-Select **ADD ENTRY** and confirm

-**NAME?** will be displayed, enter the name and confirm,

-**NUMBER?** will be displayed, enter the number and confirm,

Repeat the above steps to save other phonebook entry, if phonebook is full and you try to save an entry again, **MEM FULL** message will be prompted with the warning tone released.

### Edit an entry in phonebook.

-Press  **R** key

-Select **EDIT** and confirm

- Scroll through the name that you want to edit by using  or  keys and confirm

-Edit the new name and confirm

-Edit the new number and confirm

### The keypad of alphanumeric are as following

Key	X1	X2	X3	X4	X5
1	Space	-	1

- During playing period, you can perform the corresponding operation with the keypad.
- Press **Digit 4 / RWD** key to play the previous message, if there is already message 1, message 1 will be repeated. Press **Digit 6 / FWD** key to play the next message, the playing will be stopped if there is already the last message.
- Press **C** key or **Digit 2 / STOP** to halt the message playing. Press  key or **Digit 5 / PLAY** to play the message again.
- When playing message, press **Digit 8 / DELETE** key to delete the current playing message.

## Playing MEMO message

- Enter menu, press  key
- Select **TAM** and confirm
- Select **ACCESS TAM** and confirm
- Select **PLAY MEMO** and confirm

## V1010 2.4GHz User Manual

---

- TAM starts to play the recorded MEMO message at the speakerphone mode (default setting), if there is no MEMO message is recorded, “NO MSG” will prompt once.
- During playing period, you can press **C** key or **Digit 2 / STOP** to halt the message playing. Press  key or **Digit 5 / PLAY** to play the message again.
- When playing message, press **Digit 8 / DELETE** key to the delete current playing message.

### Recording MEMO message

- Enter menu, press  key
- Select **TAM** and confirm
- Select **ACCESS TAM** and confirm
- Select **REC MEMO** and confirm
- There will prompt you to leave your MEMO message with “RECORDING” display, and the timer will start to count the recording time. Noted that “MEM FULL” will prompt once if MEMO is already recorded message (only provides one MEMO recording space).
- Press **C** key or **Digit 2 / STOP** to stop your recording, if you do not stop your recording until the maximum recording time (1 minute) has been reached, the recording will be stopped automatically then re-playing.

### Playing outgoing message (OGM)

- Enter menu, press  key
- Select **TAM** and confirm
- Select **ACCESS TAM** and confirm
- Select **PLAY OGM** and confirm
- TAM starts to play your own OGM message at the speakerphone mode (default setting)
- During playing period, you can press **C** key or **Digit 2 / STOP** to halt the message playing. Press  key or **Digit 5 / PLAY** to play the message again.

*Note: When playing OGM message, pressing **Digit 8 / DELETE** key will delete the recorded OGM message, and there will be resumed to the default OGM, the default OGM is always remained whether your perform the delete operation / or reset TAM system.*

### Recording your own outgoing message (OGM)

Your V1010 shall has the pre-recorded OGM message (Default setting), however you can also record your own OGM message which will play to the incoming caller at ANS ICM mode.

- Enter menu, press  key
- Select **TAM** and confirm
- Select **ACCESS TAM** and confirm
- Select **REC OGM** and confirm
- There will prompt you to leave your OGM message with “RECORDING” display, and the timer will start to count the recording time.
- Press **C** key or **Digit 2 / STOP** to stop your recording, if you do not stop your recording until the

## V1010 2.4GHz User Manual

maximum recording time (30 seconds) has been reached, the recording will be stopped automatically then re-playing.

### Playing outgoing announcement (OGA)

- Enter menu, press  key
- Select **TAM** and confirm
- Select **ACCESS TAM** and confirm
- Select **PLAY OGA** and confirm
- TAM starts to play your own OGA message at the speakerphone mode (default setting)
- During playing period, you can press **C** key or **Digit 2 / STOP** to halt the message playing. Press  key or **Digit 5 / PLAY** to play the message again.

*Note: When playing OGA message, pressing **Digit 8 / DELETE** key will delete the recorded OGA message, and there will be resumed to the default OGA, the default OGA is always remained whether your perform the delete operation / or reset TAM system.*

### Recording your own outgoing announcement (OGA)

Your V1010 shall has the pre-recorded OGA message (Default setting), however you can also recording your own OGA message which will play to the incoming caller at ANS ANNC mode.

- Enter menu, press  key
- Select **TAM** and confirm
- Select **ACCESS TAM** and confirm
- Select **REC OGA** and confirm
- There will prompt you to leave your OGA message with “RECORDING” display, and the timer will start to count the recording time.
- Press **C** key or **Digit 2 / STOP** to stop your recording, if you do not stop your recording until the maximum recording time (30 seconds) has been reached, the recording will be stopped automatically then re-playing.

### Delete all of ICM and MEMO messages

“DELETE ALL” operation will allow you to delete all of the recorded messages that included ICM and MEMO at once.

- Enter menu, press  key
- Select **TAM** and confirm
- Select **DELETE ALL** and confirm
- CONFIRM ?** will be displayed, press  key to confirm
- All of the recorded ICM and MEMO messages are deleted
- “**NEW MSG x**” will be displayed once with the warning released, this means that “Delete all” operation cannot be performed if there has still new ICM message.

*Note: “DELETE ALL” operation will not affect both OGM and OGA message that you recorded..*

### Switching TAM ON/OFF

- Enter menu, press  key
- Select **TAM** and confirm
- Select **SET TAM** and confirm
- Select **TAM SWITCH** and confirm
- Select **ON** and confirm, TAM is switched to ON,  icon will be displayed. Select **OFF** and confirm, TAM is switched to OFF,  icon will be disappeared.

*Note: If TAM SWITCH is set to OFF mode, user still can access the TAM system by entering the correct remote access code after **12 rings** (this parameter is adjustable in EEPROM), but not allow to leave ICM message.*

### Changing the answering mode

- Enter menu, press  key
- Select **TAM** and confirm
- Select **SET TAM** and confirm
- Select **ANS MODE** and confirm
- Select **ANS ICM** and confirm that means TAM will answer the incoming call after the selected time of rings, it will announce OGM and allow to record ICM message.
- Select **ANS ANNC** and confirm that means TAM will answer the incoming call after the selected time of ring, it will announce OGA and not allow to record the ICM message.

*Note: If memory is recorded fully, the answer mode will be changed automatically from ANS ICM to ANS ANNC, and this mode will not resume to ANC ICM mode until you have deleted some recorded message(s).*

### Selecting the number of rings

You can select the time of rings before TAM answers the incoming call, there has 9 numbers (TOLL SAVE, 2 ~ 9) for selection

- Enter menu, press  key
- Select **TAM** and confirm
- Select **SET TAM** and confirm
- Select **RING DELAY** and confirm
- Select you desired time of rings and confirm

*Note: After TOLL SAVE mode is selected, if you have new message(s), TAM will answer the incoming call after two times ring. Otherwise, TAM will answer the incoming call after four times ring.*

### Modifying pin code of remote access

The remote access feature allows you to access your TAM form another DTMF phone, but there will require you that enter the correct pin code to access. The factory shipment setting of remote pin is **123**. you may wish to modify this pin code.

## V1010 2.4GHz User Manual

-Enter menu, press  key

-Select **TAM** and confirm

-Select **SET TAM** and confirm

-Select **REMOTE PIN** and confirm

-**OLD PIN** will be display, input old pin code that you have confirmed last time, Press  key to confirm. **NEW PIN** will be display, input the new pin code that you wanted, press  key to confirm.

*Note: If you had forgot the pin code of remote access / or entering the incorrect pin code, the system will not allow you to modify it. However the pin code will resume to the factory shipment setting after reset TAM.*

*The factory shipment setting of remote pin code is 123, which is adjustable in EEPROM.*

### Reset your TAM system

-Enter menu, press  key

-Select **TAM** and confirm

-Select **SET TAM** and confirm

-Select **RESET TAM** and confirm

-**CONFIRM ?** will be display, press  key to confirm

**Important note:** *if you had reset your TAM system, the following items will be reset to the factory shipment settings*

Items of submenu	Factory shipment setting

REMOTE PIN	123

### Incoming message (ICM) recording

When a call is incoming, and TAM is ON. TAM will answer the incoming call after the number of rings. “ANSWER ON” will be display on LCD screen of handset, and TAM will play OGM and the ready tone to the incoming caller.

After the caller leaved the message and hanged up, even record the message until the maximum

## V1010 2.4GHz User Manual

---

message length. TAM will play the stop tone (dual “Be Be” tone) then returns to idle mode, In use LED on base will flash and “NEW MSG X” will be prompted.

During ICM recording period with “ANSWER ON” shown on handset, user can decide whether to take the call by either pressing  key or  key.

*Note: Call screening feature is not applicable for V1010 model.*

If memory is recorded fully, even it is less than 30 seconds, answer mode is changed automatically to ANS ANNC mode that means there can answer the incoming call, but cannot record the ICM message. Besides, “MEM FULL” will be prompted at standby mode.

### Remote access TAM from other DTMF telephone

When user is calling V1010 from other DTMF telephone, TAM will answer the incoming call after the number of rings. “ANSWER ON” will be display on LCD screen of handset, and TAM will play OGM and the ready tone to the incoming caller. If memory is FULL, TAM will answer the incoming call after number of rings, but TAM will play OGA to the incoming caller, then TAM hangs up after 10 seconds.

During OGM / or OGA playing period, pressing once **Digit \*** key user can bypass the playing OGM / or OGA message, then enter the enter mode of remote code (the timeout is 10 seconds, this is adjustable in EEPROM).

During OGM / or OGA playing period, or at the enter mode of remote code, user can enter the correct remote code to access the TAM system, once accessed TAM will start automatically to play the new ICM message(s) if existed. But TAM will not play the old message automatically if there is not new ICM message.

If user has entered the incorrect remote code, TAM will play OGM / or OGA message again. TAM system provides 2nd chance for user to enter the correct remote code. After three times failed, TAM will reject the incoming caller and drop the line.

After user has accessed successfully to TAM system, the following operation command of remote control are apply that tell the user which button should be pressed for an operation be performed.

Press <**Digit 2**> key to stop playing

Press <**Digit 4**> to play previous message

Press <**Digit 5**> to play message

Press <**Digit 6**> to play next message

Press <**Digit 8**> to delete the current playing message

Press <**Digit 0**> to play MEMO message

Press <**Digit #**> once to switch TAM to ON, there will release the single beep tone, press again to switch TAM to OFF, there will release the dual beeps tone.

### Melody ring setting for EXT, INT and ALARM

Under **MELODY** submenu, you can select one of 12 melody ringers for external, internal call and alarm.

- At the conference call mode, either handset can hang up, and will not affect the conversation between another handset and the external call.

## V1010 2.4GHz User Manual

---

### Ring back call

This ring back call will generate on the internal caller handset if the transferred call is not answered within a timeout of 30 seconds. If there is no CID information available, **RING BACK** will be displayed; otherwise the normal CID information will display again.

If this transferred call is not yet answered within a timeout of 30 seconds, the held external call will hang up automatically.

### Specification

Standard	WDCT
Frequency	2.400 ~2.4835GHz
Channel Bandwidth	864KHz
Modulation type	GFSK with BT=0.5
CID / CIDCW type	FSK CID type i / ii + DTMF
Dialing mode	Tone (DTMF) / Pulse
Transmission speed	576Kbps
Duplexing	Time Division Duplex (TDD)
Speech encoding	ADPCM / 32kbit/s
RF Accessing	Time Division Multiple Access (TDMA)
RF Channel	95 channel
Coverage range	50m indoor; 300m in open space
Base Power Supply	AC/DC adaptor: PRI 230Vac; SEC 9Vdc 300mA
Handset Power Supply	Ni-MH Rechargeable battery: 1.2V/ 750mAh (2 x 1.2 AAA)
Charge Time initially	12 hours
Operation time	100 hours in standby; 8 hours in talk
Normal condition of use	0 ° C to 40 ° C
Storage Temperature	-20 ° C to 60 ° C

## FCC Statements

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference; and (2) This device must accept any interference received, including interference that may cause undesired operation.

### FCC RF Radiation Exposure Statement:

Caution: To maintain the compliance with the FCC's RF exposure guideline, place the base unit at least 20 cm from nearby persons.

### WARNING:

Changes or modifications to this unit not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

Privacy of communications may not be ensured when using this phone.

NOTE: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.
