

To the examiner

RE: FCC ID: URP-MSR4K44S

This application is for a Class II permissive change adding a 5745-5825 MHz band to the existing certified 2412-2462 MHz radio. During testing of the 2.4 GHz device, the 5.8 GHz radio was disabled in software.

The identical 5.8 GHz radio was tested and certified under FCC ID: UPR-MSR4000 (the 5.8 GHz band was enabled).

There are no hardware changes made to enable operation of the 5.8 GHz radio. The RF power and other RF parameters in 5.8 GHz band are also unchanged from the UPR-MSR4000 certification.
