## FCC Part 15 Subpart C Section 15.247 Industry Canada RSS-210 Issue 6

MANUFACTURER'S NAME	Wallace Technologies
NAME OF EQUIPMENT	Vu Qube, Mobile Satellite TV Antenna
MODEL NUMBER(S) TESTED	VQV10
MANUFACTURER'S ADDRESS	PO Box 49128 Blaine MN 55449
TEST REPORT NUMBER	WC606426 Rev B
TEST DATE(S)	15 - 29 November 2006

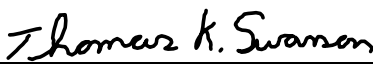

According to testing performed at TÜV SÜD America Inc, the above mentioned unit is in compliance with the applicable electromagnetic compatibility (EMC) portions of the requirements defined in FCC Part 15 Subpart C Section 15.247 and IC RSS-210 Issue 6

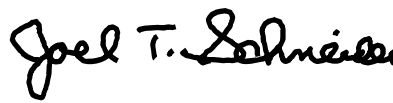

It is the manufacturer's responsibility to assure that additional production units of this model are manufactured with identical electrical and mechanical characteristics. Any modifications necessary for compliance made during testing on the above mentioned date(s) must be implemented in all production units for compliance to be maintained.

TÜV SÜD America Inc, as an independent testing laboratory, declares that the equipment tested as specified above conforms to the applicable EMC requirements of FCC Part 15 Subpart C Section 15.247 *"Operation within the bands 902–928 MHz, 2400–2483.5 MHz, and 5725–5850 MHz; General requirements."* and IC RSS-210 Issue 6 *"Low-power Licence-exempt Radiocommunication Devices (All Frequency Bands): Category I Equipment"*

The device was tested at the maximum output power to be used.

The signal is either not a pulsed signal, or the pulse width is greater than 1 microsecond, so pulse desensitization is not a factor.

Radiated measurements performed instead of conducted measurements because the transmit antenna is integral  
Antenna gain < 6 dBi

### **Equipment Under Test (EUT) Test Operation Mode:**

**The device under test was operated under the following conditions during immunity testing :**

- ☐ - Standby
- ☐ - Test program (H - Pattern)
- ☐ - Test program (color bar)
- ☐ - Test program (customer specific)
- ☐ - Practice operation
- ☐ - Normal operating mode
- ☒ - Transmit frequency locked at low, mid or high channel

### **Configuration of the device under test:**

- ☒ - See Appendix B and test setup photo(s)
- ☐ - See Product Information Form(s) in Appendix B

## DEVIATIONS FROM STANDARD:

None.

## GENERAL REMARKS:

At the time of test, the EUT was identified as Model Number X100. Notification of a change in equipment identification to Model Number V10 was received from the manufacturer and is on file with TÜV America.

### Modifications required to pass:

- ☒ None
- ☐ As indicated on the data sheet(s)

### Test Specification Deviations: Additions to or Exclusions from:

- ☒ None
- ☐ As indicated in the Test Plan

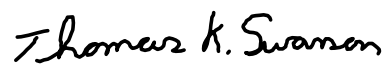

## SUMMARY:

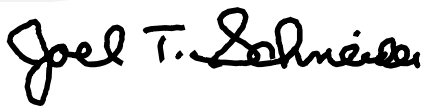

The requirements according to the technical regulations are

- ☒ - met and the device under test does fulfill the general approval requirements.
- ☐ - **not** met and the device under test does **not** fulfill the general approval requirements..

### Attendance

Test will be: ☐ Attended by the customer ☒ Unattended by the customer

### Failure - Complete this section if testing will not be attended by the customer.

If a failure occurs, TÜV America should:

- ☒ Call contact listed above, if not available then stop testing. (After hrs phone): \_\_\_\_\_
- ☐ Continue testing to complete test series.
- ☐ Continue testing to define corrective action.
- ☐ Stop testing.

### EUT Specifications and Requirements

Length: \_\_\_\_\_ Width: 18" Height: 17.5" Weight: 10.5 lbs

### Power Requirements

*Regulations require testing to be performed at typical power ratings in the countries of intended use. (i.e., European power is typically 230 VAC 50 Hz or 400 VAC 50 Hz, single and three phase, respectively)*

Voltage: 110 (If battery powered, make sure battery life is sufficient to complete testing.)

### Other Special Requirements

The Vu Qube antenna is powered from the coaxial cable attached to a Digital Broadcast Receiver.

### Typical Installation and/or Operating Environment

(ie. Hospital, Small Business, Industrial/Factory, etc.)

The Vu Qube will be either mounted to a vehicle or set outside a vehicle with the operator using the handheld remote either in the vehicle or next to the vehicle

### EUT Software

Revision Level: 10

Description: The software controls the communication between the Vu Qube antenna and the hand held remote, the positioning of the motors, and power consumption

**Equipment Under Test (EUT) Operating Modes to be Tested** — list the operating modes to be used during test. It is recommended the equipment be tested while operating in a typical operation mode. FCC testing of personal computers and/or peripherals requires that a simple program generate a complete line of upper case H's. Provide a general description of all software, firmware, and PLD algorithms used in the equipment. List all code modules as described above, with the revision level used during testing. Consult with your TÜV Product Service Representative if additional assistance is required.

1. The Remote buttons (arrows) actived to move the Antenna up and down.
2. The Remote buttons (arrows) actived to move the Antenna left and right.
3. The Remote buttons ( 1 & 2) to store and recall antenna positions.

**Equipment Under Test (EUT) System Components** — List and describe all components which are part of the EUT. For FCC & Taiwan testing a minimum configuration is required. (ie. Mouse, Printer, Monitor, External Disk Drive, Motherboard, etc)

### Measurement Protocol

# MEASUREMENT PROTOCOL

## GENERAL INFORMATION

### Test Methodology

Emissions testing is performed according to the procedures in ANSI C63.4-2003.

### Measurement Uncertainty

The test system for conducted emissions is defined as the LISN, tuned receiver or spectrum analyzer, and coaxial cable. The test system has a measurement uncertainty of  $\pm 1.8$  dB. The test system for radiated emissions is defined as the antenna, the pre-amplifier, the spectrum analyzer and the coaxial cable. The test system has a measurement uncertainty of  $\pm 4.8$  dB. The equipment comprising the test systems is calibrated on an annual basis.

### Justification

The Equipment Under Test (EUT) is configured in a typical user arrangement in accordance with the manufacturer's instructions. A cable is connected to each available port and either terminated with a peripheral into its characteristic impedance or left unterminated. When appropriate, the cables are manually manipulated with respect to each other to obtain maximum emissions from the unit.

### Conducted Emissions

The final level, in dB $\mu$ V, equals the EMI receiver level plus the cable loss and LISN factor.

### Radiated Emissions

The final level, in dB $\mu$ V/m, equals the reading from the spectrum analyzer (Level dB $\mu$ V), adding the antenna correction factor and cable loss factor (Factor dB) to it, and subtracting the preamp gain (and duty cycle correction factor, if applicable). This result then has the limit subtracted from it to provide the Delta, which gives the tabular data as shown in the data sheets in Attachment A. Intentional radiators are rotated through 3 orthogonal axes to determine the test position yielding the maximum emission levels.

Radiated emissions from the EUT are measured in the frequency range of 30 to 1000 MHz using a spectrum analyzer and appropriate broadband linearly polarized antennas. Measurements between 30 MHz and 1000 MHz are made with 120 kHz/6 dB bandwidth and quasi-peak detection and measurements above 1000 MHz are made with a 1 MHz/6 dB bandwidth and peak/average detection. The average measurements are made using a 1 MHz resolution bandwidth and a 10 Hz video bandwidth per FCC guidelines. Tabletop equipment is placed on a 1.0 X 1.5 meter non-conducting table 80 centimeters above the ground plane. Interface cables that are closer than 40 centimeters to the ground plane are bundled in the center in a serpentine fashion so they are at least 40 centimeters from the ground plane. The antenna is positioned 3, 10 or 30 meters horizontally from the EUT. To locate maximum emissions from the test sample the antenna is varied in height from 1 to 4 meters, measurement scans are made with both horizontal and vertical antenna polarizations and the EUT are rotated 360 degrees.

Example:

FREQ (MHz)	LEVEL (dB $\mu$ V)	CABLE/ANT/PREAMP (dB) (dB/m) (dB)	FINAL (dB $\mu$ V/m)	POL/HGT/AZ (m) (deg)	DELTA1
60.80	42.5Qp +	1.2 + 10.9 - 25.5 =	29.1	V 1.0 0.0	-10.9

### Test Equipment

All measurement instrumentation is traceable to the National Institute of Standards and Technology and is calibrated according to internal procedure.
