**RE: Design change to FCC Number: UUM10157V10 and IC Number: 6873A-10157V10
(Model Number VQV10R)**

To Whom It May Concern:

Wallace Technologies changed the antenna design for UUM10157V10 to move the antenna off of the board. This change was made to eliminate the signal interference from how the device is held in the hand. The antenna is currently on the circuit board and is positioned directly behind the center of the hand when device is held. The change moved the antenna to the top of the circuit board and top of enclosure for the hand held device as well as allowed for a reverse SMA connector in order to take conducted measurements.

The newly designed circuit board and antenna design will be used both in the VQV10R and a new configuration of the product with exact same function. New configuration will have a Model Number VQV10RP. The difference between the 2 models is simply that the VQV10R is the remote for a Vu Qube product that is permanently attached to a vehicle and the VQV10RP is the remote used for a Vu Qube product that is portable.
