

DFS device channel plan and software operational declaration

Date: 2022-12-08

We, Cradlepoint, Inc., declare that the device, FCC ID: **UXX-S5A246A** Model Name: **S5A246A, S5A245A**, does not have Ad Hoc on “non-US frequencies” and/or on “DFS frequencies”. Also, the client software and associated drivers will not initiate any transmission on DFS frequencies without initiation by a master. This includes restriction on transmissions for beacons as long as this doesn’t conflict with the WiFi-as-WAN mode.

Below is the channel / frequency plan for the device:

Also, on DFS channels, the WLAN driver in the device operates under the control of an AP at all times, except when the device is in AP mode on US non-DFS channels. The device passively scans DFS frequencies until a master device is detected. The control of this functionality is not accessible to anyone under any conditions. Furthermore, the firmware is protected
