

# Supplemental "Transmit Simultaneously" Test Report

**REPORT NO.:** RF111028C08-3

MODEL NO.: 21-148603-0A

FCC ID: UZ7211486030A

**RECEIVED:** Oct. 28, 2011

**TESTED:** Nov. 14 to 30, 2011

**ISSUED:** Mar. 09, 2012

APPLICANT: Motorola Solutions, Inc.

ADDRESS: 1 Motorola Plaza, Holtsville, NY 11742-1300 USA

**ISSUED BY:** Bureau Veritas Consumer Products Services

(H.K.) Ltd., Taoyuan Branch Hsin Chu Laboratory

LAB ADDRESS: No. 81-1, Lu Liao Keng, 9th Ling, Wu Lung Tsuen,

Chiung Lin Hsiang, Hsin Chu Hsien 307, Taiwan

**TEST LOCATION (1):** No. 81-1, Lu Liao Keng, 9th Ling, Wu Lung Tsuen,

Chiung Lin Hsiang, Hsin Chu Hsien 307, Taiwan

**TEST LOCATION (2):** No. 49, Ln. 206, Wende Rd., Shangshan Tsuen,

Chiung Lin Hsiang, Hsin Chu Hsien 307, Taiwan

This test report consists of 23 pages in total. It may be duplicated completely for legal use with the approval of the applicant. It should not be reproduced except in full, without the written approval of our laboratory. The client should not use it to claim product certification, approval, or endorsement by TAF or any government agencies. The test results in the report only apply to the tested sample.

### 1. CERTIFICATION

PRODUCT: Radio Module

**BRAND NAME:** Motorola

**MODEL NO.:** 21-148603-0A

**TEST ITEM:** ENGINEERING SAMPLE

**APPLICANT:** Motorola Solutions, Inc.

**TESTED:** Nov. 14 to 30, 2011

**STANDARDS:** FCC Part 15, Subpart C (Section 15.247)

ANSI C63.4-2003 ANSI C63.10-2009

The above equipment (Model: 21-148603-0A) has been tested by **Bureau Veritas Consumer Products Services (H.K.) Ltd., Taoyuan Branch**, and found compliance with the requirement of the above standards. The test record, data evaluation & Equipment Under Test (EUT) configurations represented herein are true and accurate accounts of the measurements of the sample's EMC characteristics under the conditions specified in this report.

PREPARED BY: , DATE: Mar. 09, 2012

( Midoli Peng. Specialist )

( May Chen, Deputy Manager )

# 2. SUMMARY OF TEST RESULTS

The EUT has been tested according to the following specifications:

| APPLIED STANDARD: 47 CFR Part 15, Subpart C |   |        |  |  |  |  |
|---|---|--------|--|--|--|--|
| Standard<br>Section                         | Test Type and Limit                       | Result | Remark   |  |  |  |
| 15.207                                      | AC Power Conducted Emission               | PASS   | Meet the requirement of limit. Minimum passing margin is -26.55dB at 10.406MHz |  |  |  |
| 15.247(d)                                   | Radiated Emissions<br>Limit: Table 15.209 | PASS   | Meet the requirement of limit Minimum passing margin is -4.7 dB at 40.78MHz    |  |  |  |

#### 2.1 MEASUREMENT UNCERTAINTY

Where relevant, the following measurement uncertainty levels have been estimated for tests performed on the EUT as specified in CISPR 16-4-2:

This uncertainty represents an expanded uncertainty expressed at approximately the 95% confidence level using a coverage factor of k=2.

| Measurement                       | Value   |
|-----------------------------------|---------|
| Conducted emissions               | 2.45 dB |
| Radiated emissions (30MHz-1GHz)   | 3.89 dB |
| Radiated emissions (1GHz -18GHz)  | 2.19 dB |
| Radiated emissions (18GHz -40GHz) | 2.56 dB |

# 3. GENERAL INFORMATION

# 3.1 GENERAL DESCRIPTION OF EUT

| PRODUCT                  | Radio Module   |

#### NOTE:

1. There are Bluetooth technology, GPS technology and WLAN technology used for the EUT and the functions of EUT listed as below table:

| Function  | Report No.                 |
|-----------|----------------------------|
| WLAN      | RF111028C08 (FCC Part15C)  |
|           | RF111028C08-1(FCC Part15E) |
| Bluetooth | RF111028C08-2              |

2. The antennas provided to the EUT, please refer to the following table:

|     | 3               |                |                          |                    |                    |                             |           |  |  |
|-----|-----------------|----------------|--------------------------|--------------------|--------------------|-----------------------------|-----------|--|--|
| No. | Туре            | Connector      | Model                    | Peak<br>Gain (dBi) | Cable loss<br>(dB) | Net Peak<br>Gain (dBi)      | Trace     |  |  |
| 1   | Dipole          | Reverse<br>SMA | ML-2452-APA2-01<br>Rev C | ` '                | (- /               | 2.4GHz : 2.25<br>5GHz : 3.7 | WiFi + BT |  |  |
| 2   | Chip Reverse NA |                | -                        | -                  |                    | GPS                         |           |  |  |

3. The EUT was included two SKU, which are identical to each other in all aspects except for the following table:

|                     | P/N | Description   |
|---------------------|-----|---|
| SKU #1 21-148603-01 |     | Diversity version with WLAN and BT on SHARED RF paths     |
| +                   |     | NON-Diversity version with WLAN and BT on SHARED RF paths |

SKU #1, the worse case one, was chosen for final test.

- 4. The device can transmit simultaneously on WLAN (5GHz) mode and Bluetooth mode; other modes can't support simultaneously ability. This report was recorded the transmit simultaneousl test data.
- 5. The EUT is 1 \* 1 spatial SISO (1Tx & 1Rx) without beam forming function.
- 6. The above EUT information was declared by the manufacturer and for more detailed features description, please refer to the manufacturer's specifications or User's manual.

#### 3.2 TEST MODE APPLICABLITY AND TESTED CHANNEL DETAIL:

| EUT<br>configure<br>mode | Applicable to |          |                    | Description |
|--------------------------|---------------|----------|--------------------|-------------|
|                          | PLC           | RE<1G    | RE <sup>3</sup> 1G | Beschiption |
| -                        | <b>√</b>      | <b>V</b> | √                  |             |

Where

PLC: Power Line Conducted Emission

RE<1G RE: Radiated Emission below 1GHz

RE≥1G: Radiated Emission above 1GHz

Note1: Pre-Scan has been conducted to determine the worst case mode from antenna power.

#### **POWER LINE CONDUCTED EMISSION TEST:**

Pre-Scan has been conducted to determine the worst-case mode from all possible combinations between available modulations, data rates and antenna ports (if EUT with antenna diversity architecture).

Following channel(s) was (were) selected for the final test as listed below.

| Mode             | Available<br>Channel | Tested<br>Channel | Modulation<br>Technology | Modulation<br>Type | Data Rate<br>(Mbps) |
|------------------|----------------------|-------------------|--------------------------|--------------------|---------------------|
| 5 GHz<br>802.11a | 149 to 165           | 157               | OFDM                     | BPSK               | 6                   |
| +<br>Bluetooth   | 0 to 78              | 78                | FHSS                     | 8DPSK              | -                   |

#### **RADIATED EMISSION TEST:**

Pre-Scan has been conducted to determine the worst-case mode from all possible combinations between available modulations, data rates and antenna ports (if EUT with antenna diversity architecture).

Following channel(s) was (were) selected for the final test as listed below.

| Mode             | Available<br>Channel | Tested<br>Channel | Modulation<br>Technology | Modulation<br>Type | Data Rate<br>(Mbps) |
|------------------|----------------------|-------------------|--------------------------|--------------------|---------------------|
| 5 GHz<br>802.11a | 149 to 165           | 157               | OFDM                     | BPSK               | 6                   |
| +<br>Bluetooth   | 0 to 78              | 78                | FHSS                     | 8DPSK              | -                   |

#### **TEST CONDITION:**

| APPLICABLE TO                 | ENVIRONMENTAL CONDITIONS        | INPUT POWER          | TESTED BY  |
|-------------------------------|---------------------------------|----------------------|------------|
| PLC                           | 26deg. C, 68%RH                 | 120Vac, 60Hz(system) | Andy Ho    |
| RE<1G                         | <b>RE&lt;1G</b> 18deg. C, 64%RH |                      | Nick Chang |
| <b>RE</b> 31G 19deg. C, 66%RH |                                 | DC 3.3V              | Kent Liu   |

# 3.3 DESCRIPTION OF SUPPORT UNITS

The EUT has been tested as an independent unit together with other necessary accessories or support units. The following support units or accessories were used to form a representative test configuration during the tests.

| No. | Product  | Brand    | Model No. | Serial No. | FCC ID  |  |
|-----|----------|----------|-----------|------------|---------|--|
| 4   | NOTEBOOK | DELL     | PP32LA    | ECL DOOC   | FCC D-C |  |
| 1   | COMPUTER | DELL     | PP3ZLA    | FSLB32S    | FCC DoC |  |
| 2   | DC POWER | Topygord | 6603D     | 705550     | NΙΔ     |  |
| 1 Z | SUPPLY   | Topward  | 6603D     | 795558     | NA      |  |

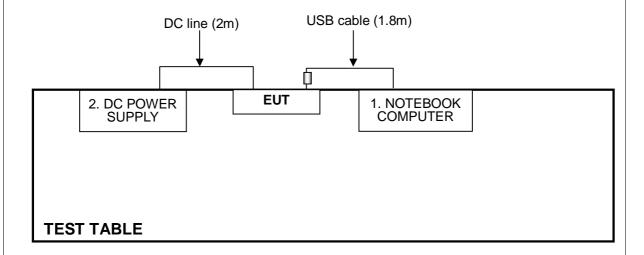

| No. | Signal cable description       |
|-----|--------------------------------|
| 1   | USB cable (1.8m with one core) |
| 2   | DC line (2m)                   |

Note: 1. All power cords of the above support units are unshielded (1.8m).

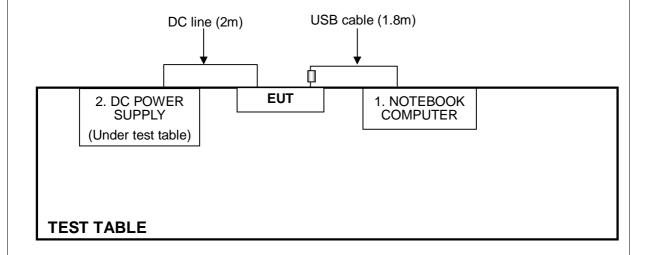

#### 3.4 CONFIGURATION OF SYSTEM UNDER TEST

#### For Conducted Emission test:

### For other test items:

#### 4. TEST TYPES AND RESULTS

#### 4.1 CONDUCTED EMISSION MEASUREMENT

#### 4.1.1 LIMITS OF CONDUCTED EMISSION MEASUREMENT

| FREQUENCY OF EMISSION (MHz) | CONDUCTED  | LIMIT (dBµV) |
|-----------------------------|------------|--------------|
|                             | Quasi-peak | Average      |
| 0.15-0.5                    | 66 to 56   | 56 to 46     |
| 0.5-5                       | 56         | 46           |
| 5-30                        | 60         | 50           |

#### NOTE:

- 1. The lower limit shall apply at the transition frequencies.
- 2. The limit decreases in line with the logarithm of the frequency in the range of 0.15 to 0.50 MHz.
- 3. All emanations from a class A/B digital device or system, including any network of conductors and apparatus connected thereto, shall not exceed the level of field strengths specified above.

#### 4.1.2 TEST INSTRUMENTS

Test date: Nov. 14, 2011

| DESCRIPTION & MANUFACTURER                                  | MODEL NO.             | SERIAL NO. | CALIBRATED DATE | CALIBRATED UNTIL |
|---|-----------------------|------------|-----------------|------------------|
| Test Receiver   | ESCS 30               | 100375     | Mar. 09, 2011   | Mar. 08, 2012    |
| Line-Impedance<br>Stabilization Network<br>(for EUT)        | NSLK8127              | 8127-522   | Sep. 07, 2011   | Sep. 06, 2012    |

| 50 ohms Terminator  | 50                    | 3          | Nov. 02, 2011   | Nov. 01, 2012    |
| Software  | BV<br>ADT_Cond_V7.3.7 | NA         | NA              | NA               |

#### Note:

- 1. The calibration interval of the above test instruments is 12 months and the calibrations are traceable to NML/ROC and NIST/USA.
- 2. The test was performed in Shielded Room No. C.
- 3 The VCCI Con C Registration No. is C-3611.

#### 4.1.3 TEST PROCEDURES

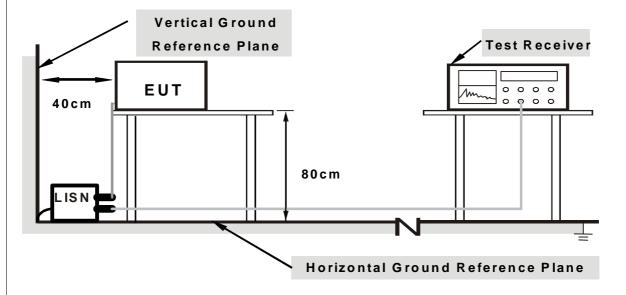

- a. The EUT was placed 0.4 meters from the conducting wall of the shielded room with EUT being connected to the power mains through a line impedance stabilization network (LISN). Other support units were connected to the power mains through another LISN. The two LISNs provide 50 ohm/ 50uH of coupling impedance for the measuring instrument.
- b. Both lines of the power mains connected to the EUT were checked for maximum conducted interference.
- c. The frequency range from 150kHz to 30MHz was searched. Emission levels under (Limit 20dB) were not recorded.

#### 4.1.4 DEVIATION FROM TEST STANDARD

No deviation

# 4.1.5 TEST SETUP

Note: 1. Support units were connected to second LISN.

2.Both of LISNs (AMN) are 80 cm from EUT and at least 80 from other units and other metal planes

For the actual test configuration, please refer to the related item – Photographs of the Test Configuration.

#### 4.1.6 EUT OPERATING CONDITIONS

- 1. Connect the EUT with the support unit 1 (Notebook Computer) which is placed on a testing table.
- 2. The communication partner run test program "RTTT.exe" to enable EUT under transmission/receiving condition continuously at specific channel frequency.

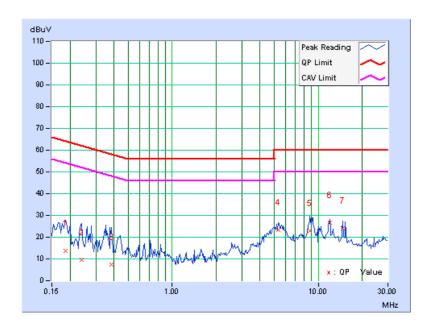

#### 4.1.7 TEST RESULTS

|    | Freq.  | Corr.  | Read<br>Val | ding<br>lue |       | sion<br>vel | Lir   | nit   | Mar    | gin    |

| 6  | 11.945 | 0.59   | 25.98       | 21.50       | 26.57 | 22.09       | 60.00 | 50.00 | -33.43 | -27.91 |
| 7  | 14.680 | 0.66   | 23.34       | 19.11       | 24.00 | 19.77       | 60.00 | 50.00 | -36.00 | -30.23 |

**REMARKS:** 1. Q.P. and AV. are abbreviations of quasi-peak and average individually.

- 2. The emission levels of other frequencies were very low against the limit.
- 3. Margin value = Emission level Limit value
- 4. Correction factor = Insertion loss + Cable loss
- 5. Emission Level = Correction Factor + Reading Value.

**REMARKS:** 1. Q.P. and AV. are abbreviations of quasi-peak and average individually.

- 2. The emission levels of other frequencies were very low against the limit.
- 3. Margin value = Emission level Limit value
- 4. Correction factor = Insertion loss + Cable loss
- 5. Emission Level = Correction Factor + Reading Value.

#### 4.2 RADIATED EMISSION MEASUREMENT

#### 4.2.1 LIMITS OF RADIATED EMISSION MEASUREMENT

Emissions radiated outside of the specified bands, shall be according to the general radiated limits in 15.209 as following:

| Frequencies<br>(MHz) | Field strength (microvolts/meter) | Measurement distance (meters) |
|----------------------|-----------------------------------|-------------------------------|
| 0.009-0.490          | 2400/F(kHz)                       | 300                           |
| 0.490-1.705          | 24000/F(kHz)                      | 30                            |
| 1.705-30.0           | 30                                | 30                            |
| 30-88                | 100                               | 3                             |
| 88-216               | 150                               | 3                             |
| 216-960              | 200                               | 3                             |
| Above 960            | 500                               | 3                             |

#### NOTE:

- 1. The lower limit shall apply at the transition frequencies.
- 2. Emission level (dBuV/m) = 20 log Emission level (uV/m).
- 3. As shown in 15.35(b), for frequencies above 1000MHz, the field strength limits are based on average detector, however, the peak field strength of any emission shall not exceed the maximum permitted average limits, specified above by more than 20dB under any condition of modulation.
- 4. Section 15.205 restricted bands of operation shall compliance with the limits in Section 15.209.

#### 4.2.2 TEST INSTRUMENTS

For below 1GHz: Test date: Nov. 26, 2011

Note: 1. The calibration interval of the above test instruments is 12 months and the calibrations are traceable to NML/ROC and NIST/USA.

The horn antenna, preamplifier (model: 8449B) are used only for the measurement of emission frequency above 1GHz if tested.
 The test was performed in 966 Chamber No. H.
 The FCC Site Registration No. is 797305.

<sup>5.</sup> The CANADA Site Registration No. is IC 7450H-3.

For above 1GHz: Test date: Nov. 30, 2011

Note: 1. The calibration interval of the above test instruments is 12 months and the calibrations are traceable to NML/ROC and NIST/USA.

2. The horn antenna, preamplifier (model: 8449B) are used only for the measurement of emission frequency above 1GHz if tested.

3. The test was performed in 966 Chamber No. G.

4. The FCC Site Registration No. is 966073.

5. The CANADA Site Registration No. is G-137.

- 6. The CANADA Site Registration No. is IC 7450H-2.

#### 4.2.3 TEST PROCEDURES

- a. The EUT was placed on the top of a rotating table 0.8 meters above the ground at a 3 meter chamber room. The table was rotated 360 degrees to determine the position of the highest radiation.
- The EUT was set 3 meters away from the interference-receiving antenna, which was mounted on the top of a variable-height antenna tower.
- c. The height of antenna is varied from one meter to four meters above the ground to determine the maximum value of the field strength. Both horizontal and vertical polarizations of the antenna are set to make the measurement.
- d. For each suspected emission, the EUT was arranged to its worst case and then the antenna was tuned to heights from 1 meter to 4 meters and the rotatable table was turned from 0 degrees to 360 degrees to find the maximum reading.
- e. The test-receiver system was set to quasi-peak detect function and specified bandwidth with maximum hold mode when the test frequency is below 1 GHz.
- f. The test-receiver system was set to peak and average detect function and specified bandwidth with maximum hold mode when the test frequency is above 1 GHz. If the peak reading value also meets average limit, measurement with the average detector is unnecessary.

#### NOTE:

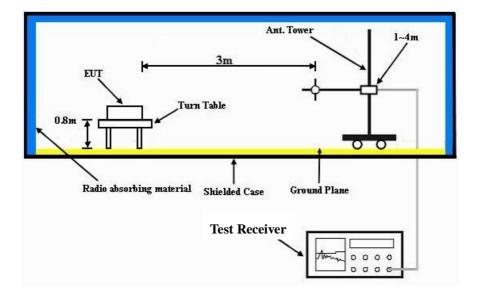

- 1. The resolution bandwidth and video bandwidth of test receiver/spectrum analyzer is 120kHz for Quasi-peak detection (QP) at frequency below 1GHz.
- 2. The resolution bandwidth of test receiver/spectrum analyzer is 1 MHz and the video bandwidth is 3 MHz for Peak detection (PK) at frequency above 1GHz.
- 3. The resolution bandwidth of test receiver/spectrum analyzer is 1 MHz and the video bandwidth is 10 Hz for Average detection (AV) at frequency above 1GHz.

#### 4.2.4 DEVIATION FROM TEST STANDARD

No deviation

# 4.2.5 TEST SETUP

For the actual test configuration, please refer to the related item – Photographs of the Test Configuration.

# 4.2.6 EUT OPERATING CONDITIONS

Same as 4.1.6

#### 4.2.7 TEST RESULTS

**REMARKS:** 1. Emission level (dBuV/m) = Raw Value (dBuV) + Correction Factor (dB/m).

- 2. Correction Factor (dB/m) = Antenna Factor (dB/m) + Cable Factor (dB).
- 3. The other emission levels were very low against the limit.
- 4. Margin value = Emission level Limit value.

**REMARKS:** 1. Emission level (dBuV/m) = Raw Value (dBuV) + Correction Factor (dB/m).

- 2. Correction Factor (dB/m) = Antenna Factor (dB/m) + Cable Factor (dB).
- 3. The other emission levels were very low against the limit.
- 4. Margin value = Emission level Limit value.

# 4. INFORMATION ON THE TESTING LABORATORIES

We, Bureau Veritas Consumer Products Services (H.K.) Ltd., Taoyuan Branch, were founded in 1988 to provide our best service in EMC, Radio, Telecom and Safety consultation. Our laboratories are accredited and approved according to ISO/IEC 17025.

Copies of accreditation and authorization certificates of our laboratories obtained from approval agencies can be downloaded from our web site: <a href="https://www.adt.com.tw/index.5.phtml">www.adt.com.tw/index.5.phtml</a>.

If you have any comments, please feel free to contact us at the following:
