

Product Description

Communication ports are labeled and color-coded:

POWER	RS232+Power	Black	Yellow	Red	White
-------	-------------	-------	--------	-----	-------

**WARNING:**

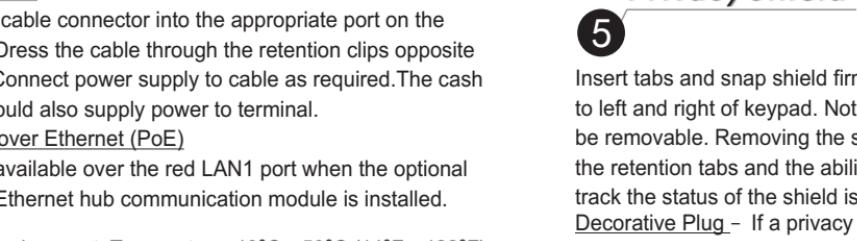

A communication module must be installed before power can be applied to the terminal. Once the new communication module is properly installed, operate the terminal as usual.

Communication Module

P^x terminals that include a default communication module come standard with one Ethernet port and RS232, USB, and PUSB network capabilities. However, if the default communication module is replaced with an optional communication module, your choice of these additional network capabilities are available:

- A second Ethernet port
- Power over Ethernet
- An Ethernet hub
- Wi-Fi and Bluetooth LE
- Wi-Fi and Cellular GSM

The communication module is located on the underside of the terminal.

3

Power Connections

Power can be supplied via the power port or a single data cable that carries power. This power can be provided via a "powered cable" where the connected POS terminal provides the power (i.e. PUSB or Power over Ethernet) or by connecting a P^x power supply directly to the data cable (i.e. RS232 or USB).

1) Power Port

Insert the power connector into the green POWER port. Turn the power connector, locking the tab behind the short plastic wall. Dress the cable through the retention clips. A separate data cable is also required.

2) POS Cable

Insert the cable connector into the appropriate port on the terminal. Dress the cable through the retention clips opposite the port. Connect power supply to cable as required. The cash register could also supply power to terminal.

3) Power over Ethernet (PoE)

Power is available over the red LAN1 port when the optional PoE and Ethernet hub communication module is installed.

Working Environment: Temperature -10°C ~ 50°C (14°F ~ 122°F)

R.H.: 10% ~ 93% (non-condensing)

Storage Environment: Temperature -20°C ~ 60°C (-4°F ~ 140°F)

R.H.: 5% ~ 95% (non-condensing)

4

Stylus Holder and Pen

1) Align stylus holder over metal screw openings at left side or top of terminal. Insert tabs into indentations along edge. Attach with captive screws.

2) Insert connector end of stylus pen into stylus port on left side of terminal.

3) Use enclosed plastic card to press stylus cord into retention clips on left side of terminal.

Privacy Shield

Insert tabs and snap shield firmly in place to left and right of keypad. Not designed to be removable. Removing the shield breaks the retention tabs and the ability to remotely track the status of the shield is lost.

Decorative Plug

An Ethernet plug is included in case you want to block an inactive LAN port. Align plug so that it matches the shape of the port and gently push into opening.

Decorative Plug - If a privacy shield is not installed, a non-removable decorative plug may be installed in its place. This plug does not provide any PIN entry privacy.

CAUTION: If the privacy shield is not installed, you must use PCI-approved alternative methods to secure the PIN pad.

Note: LAN2 port is enabled only when Ethernet hub or PoE and Ethernet communication modules are installed.

5

Plugs**1) Stylus Holder Plug**

If required, restart the terminal by pressing and holding the reset button for 2-3 seconds.

If required, a visually disabled person can connect headphones to the terminal for audio prompting using the 3.5mm output audio jack.

2) Smart Card Reader Plug

If required, insert smart card reader plug into smart card receptacle slot. To remove, if required, gently pry out the plug using a small screwdriver in the slit along top of plug.

3) Ethernet Plug

If required, insert customer-provided cable lock into K-Slot® Lock cable around permanent object to secure in place.

4) Privacy Shield

Insert the three mounting tabs on the underside of the terminal into the three metal ports on the stand base.

5) Decorative Plug

Slide the terminal firmly into position, locking the terminal in place on the stand. Secure with fastening screws or locking device as required.

6

Reset Button and Audio Jack**7) Reset Button**

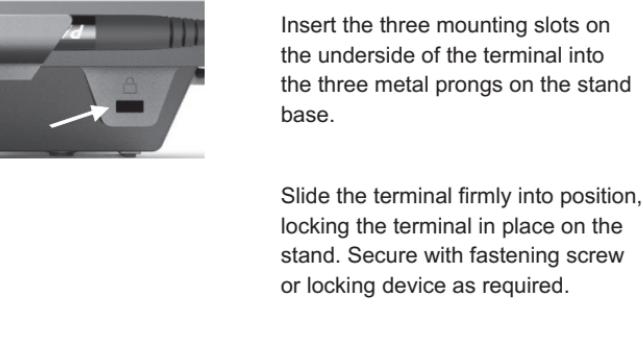

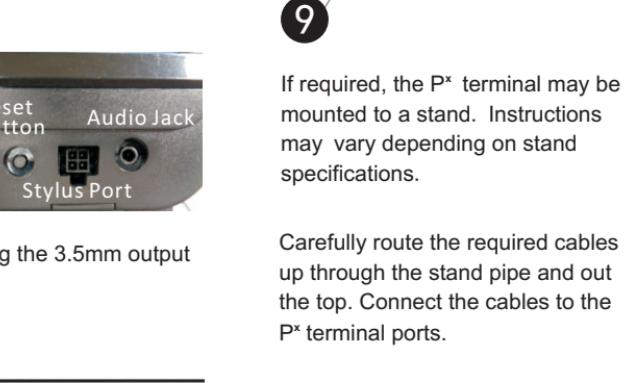

If required, restart the terminal by pressing and holding the reset button for 2-3 seconds.

8) Audio Jack

Carefully route the required cables up through the stand pipe and out the top. Connect the cables to the P^x terminal ports.

9) Stand Installation

If required, the P^x terminal may be mounted to a stand. Instructions may vary depending on stand specifications.

7

Stand Installation**8) Stand**

Route cables

Align the three mounting slots on the underside of the terminal into the three metal ports on the stand base.

9) Mounting

Slide the terminal firmly into position, locking the terminal in place on the stand. Secure with fastening screws or locking device as required.

10) Power

Connect the power cable to the power port on the terminal.

11) Final Check

Final check the terminal is properly mounted and secured.

Cleaning the Device

10

WARNING:

Do not use industrial strength or abrasive cleaner as it may damage or scratch the screen.

Do not immerse device in water (or liquid.)

Do not spray water or cleaner into the MSR slot, Smart Card Reader or ports.

To clean screen, apply distilled water or mild glass cleaner onto a soft, lint-free cloth and gently wipe terminal screen.

To clean terminal, apply distilled water or plastic-safe cleaner onto a soft, lint-free cloth and gently wipe terminal.
