

TU23A-RF-TX/RX Instruction

1. There are 5 switches on the front of remote controller. (Illustration for DIP SWITCH)

- (a) Switch 1, 2 & 3 are for Channel Code.
- (b) Switch 4 is for setting direction of customize application.
- (c) Switch 5 is for module option. (**ON**: Normal module, **OFF**: Setting module)

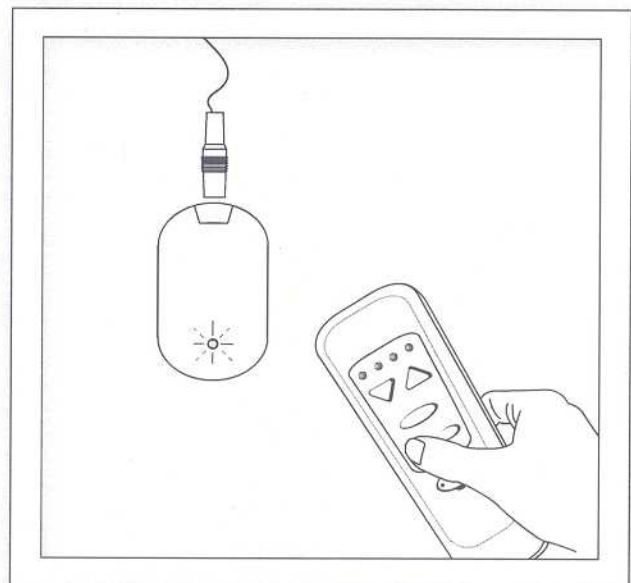

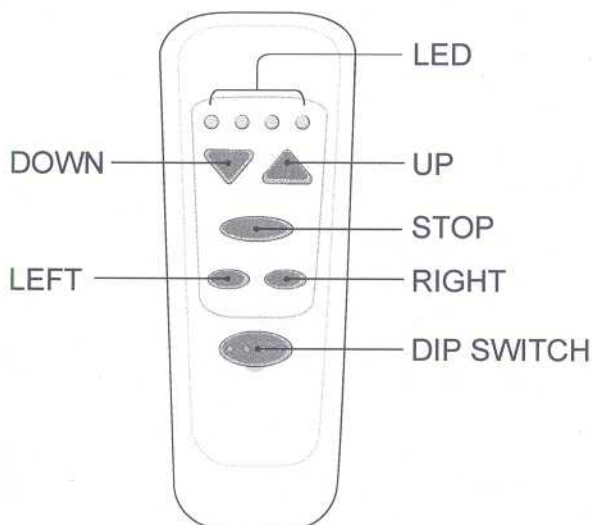

2. Operation:

- (a) Confirm all parts are assembled well.
- (b) Switch remote controller DIP SWITCH 5 to **OFF** for Setting module.
- (c) Set switch 1, 2 & 3 as a unique Channel Code. (One Channel Code can be set up for four ID Code.)
- (d) Press left or right button to select the order of customize application.
- (e) Plug in POWER CORD (LED light on the receiver starts flashing) → press **STOP** button → when the LED stops flashing, then the unique Code between remote control and customize application has been set.
- (f) Press **▲** or **▼** to confirm direction is correct. (If not, please change DIP SWITCH 4)
- (g) After all manual setting, move DIP SWITCH 5 to **ON** for Normal module. You can pressing **▲**, **▼**, **○**, **●**.
- (h) Power on and off will not affect the previous settings. The remote controller can be ready after LED light off.

Remark : Radio Frequency is 433.92MHz.
