

## **Operational Description of DS-FM2098**

**Description of Transmitter:** DS-FM2098 is the FM transmitter. It mainly consists of S9018, capacitance and inductance. The surge circuit magnified through S9018, inductance and audio output jack connected with ground. The audio cable instead of antenna to transmit.. Audio signal input through resistance, capacitance which compose the RC rejector circuit, through coupling capacitance and S9018's pole.. Transmitter has wireless headphone and wireless chatting function. The power can be supplied by 2\*AAA battery.
