MA521 Family cover letter:

**Sagem Security** acknowledges the “MA520” and “MA520gris” are downgrade products of the “MA521” family.

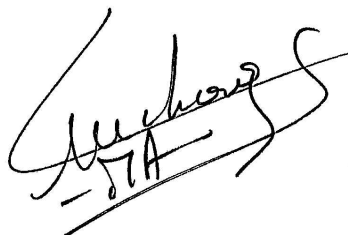

The downgrade products of a family have all the same electronic boards but without some hardware functions compared to the top version.

The FCC ID (V7AMA521) and the IC number (2599I-MA521) are still the same for all this family.

For **MA521** Family:

- “MA521” is the main product with full functionalities.
- “MA520” is the same as “MA521” but without the false finger detection module:
  - o Some electronic components are not soldered (cf. *MA520\_Part1st.pdf* and *MA520\_Internal\_images.pdf* compared to *MA21\_Part1st.pdf* and *MA521\_Internal\_images.pdf*).
  - o Prism material : PMMA for MA520 and Glass for MA521
  - o No false finger Flex cable for MA520
- “MA520gris” is the same as “MA520” but with a grey coloured cover (cf. *MA520gris\_External\_images.pdf* compared to *MA521\_External\_images.pdf*).

Sincerely,

Michel Cruchaga  
Design Engineer  
Eragny, SAGEM Security
