Test / Measurement uncertainty

The measurement uncertainty in the test met the guideline of CISPR16-4-2 or better.

Measurement uncertainty of the terminal voltage with an extended coverage factor of k=2:

Frequency	Measurement uncertainty
9kHz – 150kHz	4.0dB
150kHz – 30MHz	3.6dB

1.1.1.2 Test

Environmental conditions during the test: ☒ kept
☐ not kept

Test - / Measurement procedure

Measurements are made with a receiver according CISPR 16 guidelines. A pulse limiter and a 10dB attenuator at the receiver input is used to protect the receiver. The required frequency range is scanned in an automatically operation. When the EUT is arranged the frequency range is monitored. The setup of the equipment and the cables are manipulated within the range to produce the highest emission. Frequency steps of <0.5 x receiver bandwidth and peak / average detectors are used. If the conducted emission is closer than 20dB to the limits or exceeds, the receiver will retest the emission with quasipeak or average detector. The identified frequency and amplitude of the six highest conducted emissions relative to the limit lines are listed for each current-carrying conductor. If less than six emission frequencies are within the 20dB of the limit, the noise level of the measuring instrument at representative frequencies are reported.
The reported test results are calculated with the following formula:

Result (dBμV) = Reading (dBμV) + ATF (dB) + CF (dB)

ATF = Correction factor for the pulse limiter / 10dB attenuator
CF = Correction factor for the cable loss

Continuous operation of the RFID reader supplied by a plug-in power supply and connected to the laptop USB-port.
The Bluetooth module was configured as “Master” and active. During the test the remote station was removed from the laptop and the Bluetooth module was polling for a BT device. RFID and Bluetooth module were active at the same time.
The emanation was maximized while placing the RFID tag inside the field or without tag.

Environmental conditions

Temperature [10 - 40°C]:	20°C
Relative humidity [10 - 90%]:	53%
Environmental conditions during the test:	☒ kept
	☐ not kept

Test - / Measurement procedure

The test was performed at an antenna to EUT distance of 10m in the frequency range ≤30MHz and at 3m distance for frequencies ≥30MHz. Measurements were made with a CISPR receiver with quasi-peak. The average detector is used in the frequency bands 9-90kHz, 110-490kHz and above 1000MHz. For pulse modulated devices with a pulse repetition frequency of 20Hz or less, peak detector is used (15.35a Note). The frequency, the measured value, antenna information and the limit will be printed out.
The reported test results are calculated with the following formula:

Field strength (dBµV/m) = Reading (dBµV) + AF (dB/m) + CF (dB)

AF = Correction factor for the antenna
CF = Correction factor for the cable loss

$Limit_{10m}$ (dBµV/m) = Limit (dBµV/m) + LCF_{10m} (dB)

$Limit_{10m}$ Limit calculated for 10m test distance
LCF_{10m} = Limit Correction factor for 10m test distance
LCF_{10m} for 30m antenna distance = 20dB
LCF_{10m} for 100m antenna distance = 40dB
LCF_{10m} for 300m antenna distance = 60dB

Environmental conditions

Temperature [10 - 40°C]:	20°C
Relative humidity [10 - 90%]:	53%
Environmental conditions during the test:	☒ kept
	☐ not kept

Test - / Measurement procedure

The test was performed at an antenna to EUT distance of 10m in the frequency range ≤30MHz and at 3m distance for frequencies ≥30MHz. Measurements were made with a CISPR receiver with quasi-peak. The average detector is used in the frequency bands 9-90kHz, 110-490kHz and above 1000MHz. For pulse modulated devices with a pulse repetition frequency of 20Hz or less, peak detector is used (15.35a Note). The frequency, the measured value, antenna information and the limit will be printed out.
The reported test results are calculated with the following formula:

Field strength (dBµV/m) = Reading (dBµV) + AF (dB/m) + CF (dB)

AF = Correction factor for the antenna
CF = Correction factor for the cable loss

$Limit_{10m}$ (dBµV/m) = Limit (dBµV/m) + LCF_{10m} (dB)

$Limit_{10m}$ Limit calculated for 10m test distance
LCF_{10m} = Limit Correction factor for 10m test distance
LCF_{10m} for 30m antenna distance = 20dB
LCF_{10m} for 100m antenna distance = 40dB
LCF_{10m} for 300m antenna distance = 60dB

Test result

Limits for intentional radiators: ☒ kept ☐ not kept

Level of the fundamental > unwanted emission: ☒ kept ☐ not kept

Remarks: Radio disturbances below the limit line with a margin >10dB to the limit are generally not listed.

Regulation

47 CFR Part 15 Subpart C - 04/2016

Requirement: ☒ Section 15.205(a)

Limit spurious emission: ☒ Section 15.209
☒ CISPR quasi peak detector (f ≤ 1GHz)
☐ Average detector(f > 1GHz)

Operation mode

EUT arrangement:	☒ Tabletop	☐ Floor standing
Power supply:	☒ 120V/60Hz	☐ 240V/60Hz
Rated voltage variation:	☐ 85%	☐ 115%

Continuous operation of the RFID reader supplied by a plug-in power supply and connected to the laptop USB-port.
RFID tag placed at approx. of the half reading distance. The Bluetooth module was configured as "Master" and active. During the test the remote station was removed from the laptop and the Bluetooth module was polling for a BT device. RFID and Bluetooth module were active at the same time.

Environmental conditions

Temperature [10 - 40°C]:	22°C
Relative humidity [10 - 90%]:	46%
Environmental conditions during the test:	☒ kept ☐ not kept

Test - / Measurement procedure

Position the EUT in front of the measuring antenna. The analyzer is set to peak detector and the trace mode to max. hold. Set the analyzer to the identified fundamental and the sweep is continued until the trace is stabilized. The frequencies of the maximum of the envelope and the outermost points attenuated by 20dB to the maximum are noted.

Test result

Measured fundamental: 0.13422MHz
20dB-Emission Bandwidth: 0.668kHz

Fundamental out of restricted bands: ☒ kept ☐ not kept

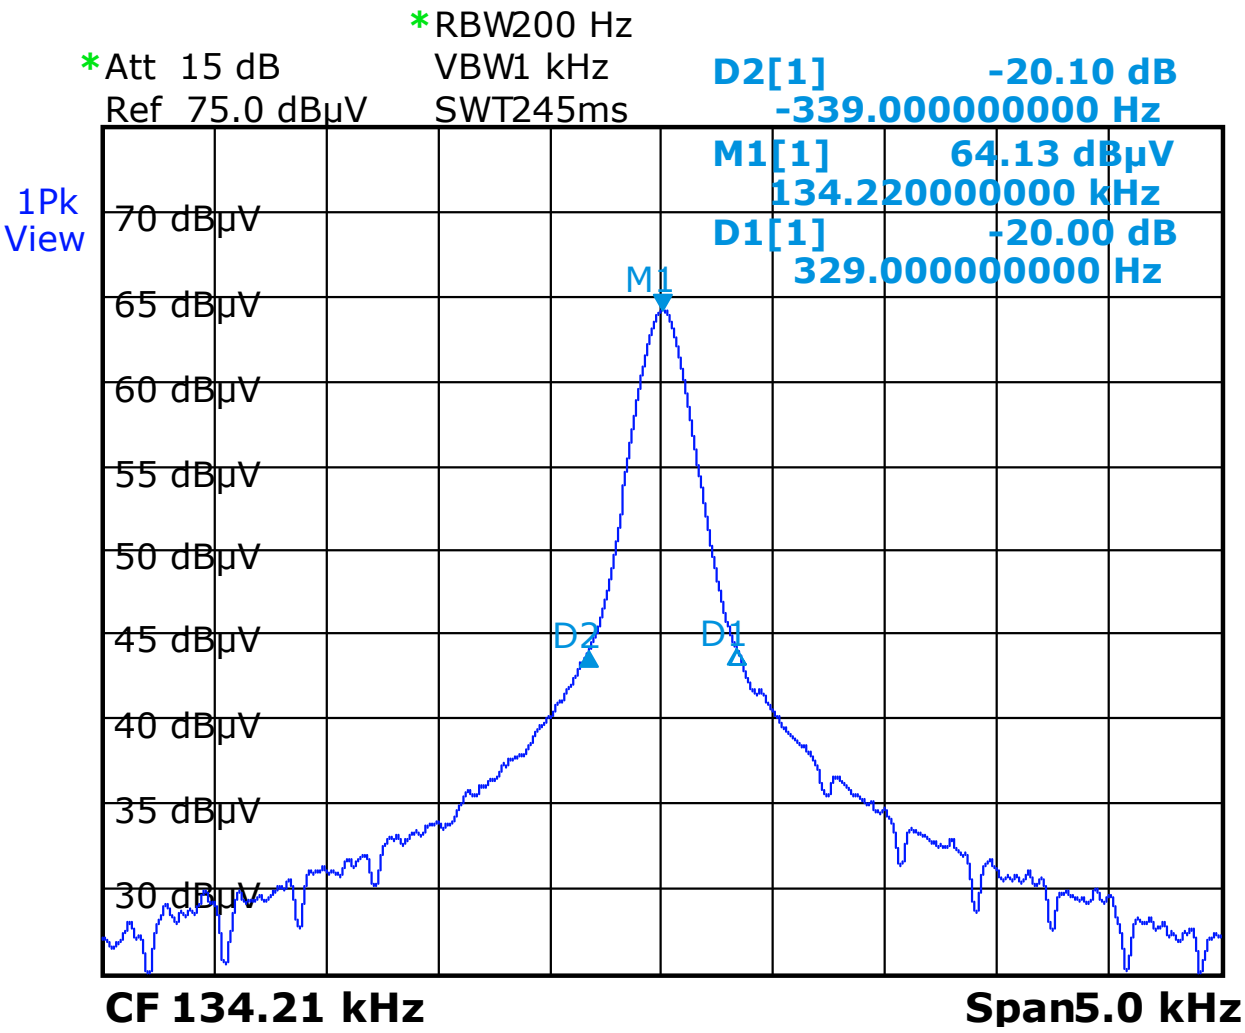
Limit spurious emission: ☒ kept ☐ not kept

Remarks: n/a

Protocol scope

☒ Diagram – 20dB-Emission bandwidth.

Occupied bandwidth



PRN12_05, URH 1LA – x/U/C/B/H/N/CS2

Date: 23.MAR.2016 09:54:33

Occupied bandwidth BW = D1 - D2 = 0.339kHz - -0.329kHz=0.668kHz
