

## CIRCUIT DESCRIPTION

Sense organ PAN3101 can make the light signal transfer to electronic signal transfer through XY axis coding and then transfer to MCU ( MCC6604 ), 12MHZ contented flap to PAN3101 inner working system , LED for the power of sense organ PAN3101.

MCU ( MCC6604 ) IC make combo data of the coder and the other bottom and XY axis code data, and give RF module electronic board for RF adjust and RF shoot, 26MHZ brilliant flap as RF IC working root. IC 24C02 save RF ID code for every mutual code. The power adopted DC/DC electronic board to make sure the usual working of all electronic parts.
