**Objet : Description of a training collar.**

Dear sir,

We would like to validate 2 products of our range to be able to sell them on the american market, Master plus Pro et Jetcare Education Pro.

Those products are training collars for dogs, they are commonly used on the European market and we developed one specially for USA to be sure that the product complain with FCC.

With those products you can train your dogs gently with the receiver around the neck of the dog. This product reach 200m with an external antenna on the receiver and no external antenna on the transmitter those 2 product emits on the frequency 915.42 MHz.

The emission is done by a radio module coming from INFINEON with the reference TDA 5102.

On the keyboard of the transmitter there are 3 keys  
One for emission of a bip on the receiver  
One for emission of a short spray on the receiver  
One for emission of a long spray on the receiver.

Dogs are surprised with the emission of a spray, and stop them on what they are doing.

Functions of both products are the same.

Produit Master plus pro with FCC ID : V8E EDSPRAY ref :056010

Jetcare system Education Pro with FCC ID : V8E-EDSPRAY réf :048010
