

Circuit Description

Transmitter Model No.: NXW-001 is 2.4G wireless speaker system transmit device with a external audio input port, and the modulation of radio frequency use a crystal control frequency modulation, circuit consisting of the following:

- 1, The radio control signal is produced and encoded by a encode signal generator-JX206.
- 2, The RF signal is produced and modulated by oscillate circuit-JX206 with 16MHz oscillistor.
- 3, The frequency 2406MHz to 2472MHz RF signal is transmitting by antenna via a RF power amplifier and filter.
