Deviations From Test Standards

None

Approved By:

Kyle Holgate, Operations Manager

Product compliance is the responsibility of the client; therefore, the tests and equipment modes of operation represented in this report were agreed upon by the client, prior to testing. The results of this test pertain only to the sample(s) tested. The specific description is noted in each of the individual sections of the test report supporting this certificate of test. This report reflects only those tests from the referenced standards shown in the certificate of test. It does not include inspection or verification of labels, identification, marking or user information. As indicated in the Statement of Work sent with the quotation, Element's standard process is to always use the latest published version of the test methods even when earlier versions are cited in the test specification. Issuance of a purchase order was de facto acceptance of this approach. Otherwise, the client would have advised Element in writing of the specific version of the test methods they wanted applied to the subject testing.

REVISION HISTORY

Revision Number	Description	Date (yyyy-mm-dd)	Page Number
00	None		

ACCREDITATIONS AND AUTHORIZATIONS

United States

FCC - Designated by the FCC as a Telecommunications Certification Body (TCB). Certification chambers, Open Area Test Sites, and conducted measurement facilities are listed with the FCC.

A2LA - Accredited by A2LA to ISO / IEC 17065 as a product certifier. This allows Element to certify transmitters to FCC and IC specifications.

NVLAP - Each laboratory is accredited by NVLAP to ISO 17025

Canada

ISED - Recognized by Innovation, Science and Economic Development Canada as a Certification Body (CB) and as a CAB for the acceptance of test data.

European Union

European Commission – Within Element, we have a EU Notified Body validated for the EMCD and RED Directives.

Australia/New Zealand

ACMA - Recognized by ACMA as a CAB for the acceptance of test data.

Korea

MSIT / RRA - Recognized by KCC's RRA as a CAB for the acceptance of test data.

Japan

VCCI - Associate Member of the VCCI. Conducted and radiated measurement facilities are registered.

Taiwan

BSMI – Recognized by BSMI as a CAB for the acceptance of test data.

NCC - Recognized by NCC as a CAB for the acceptance of test data.

Singapore

IDA – Recognized by IDA as a CAB for the acceptance of test data.

Israel

MOC – Recognized by MOC as a CAB for the acceptance of test data.

Hong Kong

OFCA – Recognized by OFCA as a CAB for the acceptance of test data.

Vietnam

MIC – Recognized by MIC as a CAB for the acceptance of test data.

MEASUREMENT UNCERTAINTY

Measurement Uncertainty

When a measurement is made, the result will be different from the true or theoretically correct value. The difference is the result of tolerances in the measurement system that cannot be completely eliminated. To the extent that technology allows us, it has been our aim to minimize this error. Measurement uncertainty is a statistical expression of measurement error qualified by a probability distribution.

A measurement uncertainty estimation has been performed for each test per our internal quality document QM205.4.6. The estimation is used to compare the measured result with its "true" or theoretically correct value. The expanded measurement uncertainty (K=2) can be found included as part of the applicable test description page. Our measurement data meets or exceeds the measurement uncertainty requirements of the applicable specification; therefore, the test data can be compared directly to the specification limit to determine compliance. The calculations for estimating measurement uncertainty are based upon ETSI TR 100 028 (or CISPR 16-4-2 as applicable), and are available upon request.

The following table represents the Measurement Uncertainty (MU) budgets for each of the tests that may be contained in this report.

Test	+ MU	- MU
Frequency Accuracy	0.0007%	-0.0007%
Amplitude Accuracy (dB)	1.2 dB	-1.2 dB
Conducted Power (dB)	1.2 dB	-1.2 dB
Radiated Power via Substitution (dB)	0.7 dB	-0.7 dB
Temperature (degrees C)	0.7°C	-0.7°C
Humidity (% RH)	2.5% RH	-2.5% RH
Voltage (AC)	1.0%	-1.0%
Voltage (DC)	0.7%	-0.7%
Field Strength (dB)	5.1 dB	-5.1 dB
AC Powerline Conducted Emissions (dB)	2.6 dB	-2.6 dB

Client and Equipment Under Test (EUT) Information

Company Name:	Nokia Solutions and Networks
Address:	6000 Connection Drive
City, State, Zip:	Irving, 75039
Test Requested By:	Steve Mitchell
EUT:	Airscale Base Transceiver Station Remote Radio Head Model AHLBBA
First Date of Test:	March 23, 2020
Last Date of Test:	March 26, 2020
Receipt Date of Samples:	March 23, 2020
Equipment Design Stage:	Production
Equipment Condition:	No Damage
Purchase Authorization:	Verified

Information Provided by the Party Requesting the Test

Functional Description of the EUT:

A class II permissive change on the original Airscale BTS RRH model AHLBBA FCC and ISSED radio certifications is being pursued as follows:

- (1) LTE Band 12 frequency definition is changed from (BTS Rx: 699 to 714 MHz/BTS TX: 729 to 744 MHz) to (BTS Rx: 699 to 715 MHz/BTS TX: 729 to 745 MHz). Band 12 upper band edge increased by 1MHz.
- (2) LTE Band 29 frequency definition is changed from (BTS TX: 718 to 728 MHz) to (BTS TX: 717 to 728 MHz). Band 29 lower band edge extended by 1MHz.
- (3) LTE Narrow Band IoT Guard Band operations are added for Band 12, Band 14 and Band 29.
- (4) LTE Narrow Band IoT In-Band operations are added for Band 12

The original FCC certification submittal (FCC ID: VBNAHLBBA-01) was Element Test Report Number NOKI0004.1 Revision 00 and the original ISSED certification submittal (IC ID: 661W-AHLBBA) was Element Test Report Number NOKI0004.2 Revision 00. The original test effort includes testing for LTE technologies. Please refer to the test report on the original certification for details on all required testing. The testing in this effort was performed on the same hardware (AHLBBA) as the original certification. The same RF ports determined in the original certification testing to be the highest power ports were used for all testing in this effort [Antenna 1 (measurements between Ant Ports 1 & 4) and Antenna 2 (measurements between Ant Ports 2 & 3)]. For changes 1 & 2 noted above, the band 12 and band 29 downlink frequency range changes are small (1MHz) so the conducted emission testing was limited to measurements at the new band edge frequencies per correspondence/guidance from Nemko TCB. The RF conducted emission measurements (at the new band 12 and band 29 band edges) include average power, CCDF and band edge spurious emissions. The emission bandwidth (99% and 26dB down) and conducted spurious emissions were not repeated since the band edge definition changes do not affect these measurements. The AHLBBA LTE Band 14 frequency definition has not changed from the original test effort. For changes 3 & 4 noted above, the conducted RF testing performed for the original certification testing has been repeated using NB IoT Guard Band and In-Band operations per correspondence/guidance from Nemko TCB. The same test methodology used in the original certification testing was used in this class II permissive change test effort. The RF conducted emission measurements (at the new band 12 and band 29 band edges) include average power, CCDF, emission

PRODUCT DESCRIPTION

bandwidth (99% and 26dB down), band edge spurious emissions and conducted spurious emissions. The radiated emissions and frequency stability measurements performed in the original certification were not repeated under this effort per TCB guidance. The radiated emission and frequency stability/accuracy results from the original certification had enough margin to preclude requiring additional testing. The same frequency stability/accuracy radio design is the same for all radio technologies/modulation types.

The equipment under test (EUT) is a Nokia Solutions and Networks Airscale Base Transceiver Station (BTS) Remote Radio Head (RRH) module, model AHLBBA. The AHLBBA remote radio head is a multi-standard multi-carrier radio module designed to support LTE, LTE narrow band IoT (internet of things) operations (in-band, guard band, standalone) and 5G-NR (fifth generation – new radio). The scope of testing in this effort is for LTE-FDD operations (including NB IoT GB and NB IoT In-Band).

The AHLBBA RRH has four transmit/four receive antenna ports (4TX/4RX for Band 12, 4TX/4RX for Band 14 and 2TX for Band 29). Antenna ports 1-4 support 3GPP frequency band 12 (BTS Rx: 699 to 715 MHz/BTS TX: 729 to 745 MHz) and 3GPP frequency band 14 (BTS Rx: 788 to 798 MHz/BTS TX: 758 to 768 MHz) at 80 watts/carrier. Antenna ports 1 & 4 support 3GPP frequency band 29 downlink (BTS TX: 717 to 728 MHz) at 25 watts/carrier. The total output power is 105 watts for antenna ports 1 & 4 (supports frequency bands 12, 14 & 29) and 80 watts for antenna ports 2 & 3 (supports frequency bands 12 & 14 only). The maximum RRH RF output power for all antenna ports (1 – 4) is 370 Watts. The RRH can be operated as a 4x4 MIMO, 2x2 MIMO or as non-MIMO for Bands 12 & 14 and 2port MIMO or as non-MIMO for Band 29. The TX and RX instantaneous bandwidth cover the full operational bandwidth.

The RRH supports LTE bandwidths of 5 and 10MHz for 3GPP frequency band 12, band 14 and band 29 operations. The RRH supports four LTE downlink modulation types (QPSK, 16QAM, 64QAM and 256QAM). The LTE modulation types are setup according to 3GPP TS 36.141 E-UTRA Test Models (E-TM) as follows E-TM 1.1: QPSK, E-TM 3.1: 64QAM, E-TM3.1a: 256QAM and E-TM 3.2: 16QAM. Multi-carrier operation is supported. The LTE modulation type for IoT testing are setup according to 3GPP TS 36.141 E-UTRA Test Models and is “E-TM 1.1 (QPSK modulation type) with N-TM (narrow band IoT)”. Narrow band IoT Guard Band operations are supported in AHLBBA bands 12, 14, and 29 for the LTE10 channel bandwidth. Narrow band IoT In-Band operations are supported in AHLBBA band 12 for LTE5 and LTE10 channel bandwidths.

The RRH has external interfaces including DC power (DC In), ground, transmit/receive (ANT), external alarm (EAC), optical CPRI (OPT) and remote electrical tilt (RET). The RRH with applicable installation kit may be pole or wall mounted.

PRODUCT DESCRIPTION

The AHLBBA LTE Band 12 downlink channel numbers and frequencies are provided below.

	Downlink EARFCN	Downlink Frequency (MHz)	LTE Channel Bandwidth	
			5 MHz	10 MHz
Band 12 (Ant 1, 2, 3, 4)	5010	729.0	Band Edge	Band Edge
				
	5035	731.5	Bottom Ch	
				
	5060	734.0		Bottom Ch
				
	5090	737.0	Middle Ch	Middle Ch
				
	5120	740.0		Top Channel
				
	5145	742.5	Top Channel	
				
	5170	745.0	Band Edge	Band Edge

AHLBBA Downlink Band Edge LTE Band 12 Frequency Channels

The AHLBBA LTE Band 14 downlink channel numbers and frequencies are provided below.

	Downlink EARFCN	Downlink Frequency (MHz)	LTE Channel Bandwidth	
			5 MHz	10 MHz
Band 14 (Ant 1, 2, 3, 4)	5280	758.0	Band Edge	Band Edge
				
	5305	760.5	Bottom Ch	
				
	5330	763.0	Middle Ch	Bottom Ch Middle Ch Top Channel
				
	5355	765.5	Top Channel	
				
	5380	768.0	Band Edge	Band Edge

AHLBBA Downlink Band edge LTE Band 14 Frequency Channels

PRODUCT DESCRIPTION

The AHLBBA LTE Band 29 downlink channel numbers and frequencies are provided below:

	Downlink EARFCN	Downlink Frequency (MHz)	LTE Channel Bandwidth	
			5 MHz	10 MHz
AHLBBA Band 29 (Ant 1, 4)	9660	717.0	Band Edge	Band Edge
				
	9685	719.5	Bottom Channel	
				
	9710	722.0		Bottom Channel
				
	9715	722.5	Middle Channel	Middle Channel
				
	9720	723.0		Top Channel
				
	9745	725.5	Top Channel	
				
	9770	728.0	Band Edge	Band Edge

AHLBBA Downlink Band Edge LTE Band 29 Frequency Channels

AHLBBA Connector Layout:

PRODUCT DESCRIPTION

AHLBBA External Interfaces

Name	Qty	Connector Type	Purpose (and Description)
DC In	1	Quick Disconnect	2-pole Power Circular Connector
GND	1	Screw lug (2xM5/1xM8)	Ground
ANT	4	4.3-10	RF signal for Transmitter/Receiver (50 Ohm)
Unit	1	LED	Unit Status LED
EAC	1	MDR26	External Alarm Interface (4 alarms)
OPT	2	SFP+ cage	Optical CPRI Interface up to 10 Gps.
RET	1	8-pin circular connector conforming to IEC 60130-9 – Ed.3.0	AISG 2.0 to external devices

Testing Objective:

A class II permissive change on the original filing is being pursued to increase the AHLBBA LTE band 12 & 29 operational frequency ranges and to add LTE narrow band IoT Guard Band & In-Band carrier capability to the Airscale BTS RRH model AHLBBA FCC and ISED radio certifications.

Item	Date	Test	Modification	Note	Disposition of EUT
1	2020-03-23	Occupied Bandwidth	Tested as delivered to Test Station.	No EMI suppression devices were added or modified during this test.	EUT remained at Element following the test.
2	2020-03-24	Output Power	Tested as delivered to Test Station.	No EMI suppression devices were added or modified during this test.	EUT remained at Element following the test.
3	2020-03-24	Peak to Average Power (PAPR) CCDF	Tested as delivered to Test Station.	No EMI suppression devices were added or modified during this test.	EUT remained at Element following the test.
4	2020-03-25	Band Edge Compliance	Tested as delivered to Test Station.	No EMI suppression devices were added or modified during this test.	EUT remained at Element following the test.
5	2020-03-26	Spurious Conducted Emissions	Tested as delivered to Test Station.	No EMI suppression devices were added or modified during this test.	Scheduled testing was completed.

OCCUPIED BANDWIDTH LTE BAND 14 (GUARDBAND)

XMIT 2019.09.05

Testing was performed using the mode(s) of operation and configuration(s) noted within the report. The individuals and/or the organization requesting the test provided the modes, configurations and settings used to complete the evaluation. The actual test parameters are specified in the test data, this includes items such as investigated frequency range (scanned) and test levels. The testing methods and performance specifications, as well as the test site used for the evaluation are indicated in the test data.

TEST EQUIPMENT

Description	Manufacturer	Model	ID	Last Cal.	Cal. Due
Analyzer - Spectrum Analyzer	Agilent	N9010A	AFL	27-Feb-20	27-Feb-21
Generator - Signal	Keysight	N5171B-506	TEW	2-May-18	2-May-21

TEST DESCRIPTION

The 99% bandwidth was measured utilizing the analyzer's peak detector and measuring the carrier's 26 dB occupied bandwidth based on the peak output power level measured. A plot was taken to show the occupied bandwidth is contained within the allowable transmit band.

The measurement was made using a direct connection between the RF output of the EUT and the spectrum analyzer. The method in section 5.4 of ANSI C63.26 was used to make this measurement. The spectrum analyzer settings were as follows:

- RBW is 1% - 5% of the occupied bandwidth
- VBW is $\geq 3x$ the RBW
- Peak Detector was used
- Trace max hold was used

The occupied bandwidth was measured with the EUT configured in the modes called out in the data sheets.

FCC 2.1049 defines the 26dB emission bandwidth requirement.

RSS GEN Section 6.7 defines the 99% emission bandwidth requirement

Band 14 Emission Designators:

Band 14 (758MHz to 768MHz) Emission Designators for NB <u>IoT</u> Guard Band			
Channel Bandwidth	Port Assignment	LTE: QPSK, Single Ch.	
		FCC	IC
10M	Port 1	10M19F9W	9M68F9W
	Port 2	10M20F9W	9M71F9W
Note: FCC based on 26dB emission bandwidth; IC based on 99% emission bandwidth.

COMMENTS			
All measurement path losses were accounted for in the reference level offset including any attenuators, filters and DC blocks. The hottest port per power amplifier (PA) was used for testing. The worst case port was determined in the original client provided test report. The carrier power was set to maximum for all testing.

TEST DESCRIPTION

The 99% bandwidth was measured utilizing the analyzer's peak detector and measuring the carrier's 26 dB occupied bandwidth based on the peak output power level measured. A plot was taken to show the occupied bandwidth is contained within the allowable transmit band.

The measurement was made using a direct connection between the RF output of the EUT and the spectrum analyzer. The method in section 5.4 of ANSI C63.26 was used to make this measurement. The spectrum analyzer settings were as follows:

- RBW is 1% - 5% of the occupied bandwidth
- VBW is $\geq 3x$ the RBW
- Peak Detector was used
- Trace max hold was used

The occupied bandwidth was measured with the EUT configured in the modes called out in the data sheets.

FCC 2.1049 defines the 26dB emission bandwidth requirement.

RSS GEN Section 6.7 defines the 99% emission bandwidth requirement

Band 12 Emission Designators:

Band 12 (729MHz to 745MHz) Emission Designators for NB IoT Guard Band

COMMENTS			
All measurement path losses were accounted for in the reference level offset including any attenuators, filters and DC blocks. The hottest port per power amplifier (PA) was used for testing. The worst case port was determined in the original client provided test report. The carrier power was set to maximum for all testing.

Testing was performed using the mode(s) of operation and configuration(s) noted within the report. The individuals and/or the organization requesting the test provided the modes, configurations and settings used to complete the evaluation. The actual test parameters are specified in the test data, this includes items such as investigated frequency range (scanned) and test levels. The testing methods and performance specifications, as well as the test site used for the evaluation are indicated in the test data.

TEST EQUIPMENT

Description	Manufacturer	Model	ID	Last Cal.	Cal. Due
Analyzer - Spectrum Analyzer	Agilent	N9010A	AFL	27-Feb-20	27-Feb-21
Generator - Signal	Keysight	N5171B-506	TEW	2-May-18	2-May-21

TEST DESCRIPTION

The 99% bandwidth was measured utilizing the analyzer's peak detector and measuring the carrier's 26 dB occupied bandwidth based on the peak output power level measured. A plot was taken to show the occupied bandwidth is contained within the allowable transmit band.

The measurement was made using a direct connection between the RF output of the EUT and the spectrum analyzer. The method in section 5.4 of ANSI C63.26 was used to make this measurement. The spectrum analyzer settings were as follows:

- RBW is 1% - 5% of the occupied bandwidth
- VBW is $\geq 3x$ the RBW
- Peak Detector was used
- Trace max hold was used

The occupied bandwidth was measured with the EUT configured in the modes called out in the data sheets.

FCC 2.1049 defines the 26dB emission bandwidth requirement.

RSS GEN Section 6.7 defines the 99% emission bandwidth requirement
