SCOPE

Tests have been performed on Nokia Solutions and Networks product Flexi Multiradio BTS RRH Model FRBG, pursuant to the relevant requirements of the following standard(s) in order to obtain device certification against the regulatory requirements of the Federal Communications Commission.

- Code of Federal Regulations (CFR) Title 47 Part 2
- CFR Title 47 Part 27 Subpart C
- RSS-Gen Issue 4 November 2014
- RSS-130 Issue 1 October 2013

Conducted and radiated emissions data has been collected, reduced, and analyzed within this report in accordance with measurement guidelines set forth in the following reference standards:

ANSI C63.4-2009
ANSI TIA-603-C
FCC KDB 971168 D01 v02r02

The intentional radiator above has been tested in a simulated typical installation to demonstrate compliance with the relevant FCC requirements.

Every practical effort was made to perform an impartial test using appropriate test equipment of known calibration. All pertinent factors have been applied to reach the determination of compliance.

The test results recorded herein are based on a single type test of Nokia Solutions and Networks product Flexi Multiradio BTS RRH Model FRBG and therefore apply only to the tested sample. The sample was selected and prepared by Hobert Smith of Nokia Solutions and Networks.

OBJECTIVE

The primary objective of the manufacturer is compliance with the regulations outlined in the previous section.

Prior to marketing in the USA, the device requires certification. Prior to marketing in Canada, Class I transmitters, receivers and transceivers require certification.

Certification is a procedure where the manufacturer submits test data and technical information to a certification body and receives a certificate or grant of equipment authorization upon successful completion of the certification body's review of the submitted documents. Once the equipment authorization has been obtained, the label indicating compliance must be attached to all identical units, which are subsequently manufactured.

Maintenance of compliance is the responsibility of the manufacturer. Any modification of the product which may result in increased emissions should be checked to ensure compliance has been maintained (i.e., printed circuit board layout changes, different line filter, different power supply, harnessing or I/O cable changes, etc.).

Testing was performed only on Model FRBG. No additional models were described or supplied for testing.

STATEMENT OF COMPLIANCE

The tested sample of Nokia Solutions and Networks product Flexi Multiradio BTS RRH Model FRBG complied with the requirements of the standards and frequency bands declared in the scope of this test report.

Maintenance of compliance is the responsibility of the manufacturer. Any modifications to the product should be assessed to determine their potential impact on the compliance status of the device with respect to the standards detailed in this test report.

DEVIATIONS FROM THE STANDARDS

No deviations were made from the published requirements listed in the scope of this report.

Note: FCC based on 26dB emission bandwidth, IC based on 99% emissions bandwidth.

EXTREME CONDITIONS

Frequency stability is determined over extremes of temperature and voltage. The extremes of voltage were 85 to 115 percent of the nominal value.

The extremes of temperature were -30°C to +50°C as specified in FCC §2.1055(a)(1).

MEASUREMENT UNCERTAINTIES

Measurement uncertainties of the test facility based on a 95% confidence level are as follows,

Test	Uncertainty
Radio frequency	± 0.2ppm
RF power conducted	±1.2 dB
RF power radiated	±3.3 dB
RF power density conducted	±1.2 dB
Spurious emissions conducted	±1.2 dB
Adjacent channel power	±0.4 dB
Spurious emissions radiated	±4 dB
Temperature	±1°C
Humidity	±1.6 %
Voltage (DC)	±0.2 %
Voltage (AC)	±0.3 %

EQUIPMENT UNDER TEST (EUT) DETAILS**GENERAL**

The equipment under test (EUT) is a Nokia Solutions and Networks Flexi Multiradio Base Transceiver Station (BTS) Remote Radio Head (RRH) module, model FRBG which operates over 3GPP frequency band 12 (729-745 MHz) and band 29 (718-728 MHz). The FRBG has four co-located transmitters with each transmit port supporting 40 watts maximum rated RF output power. The FRBG can be operated as MIMO or as non-MIMO. Multi-carrier operation is supported.

The FRBG is multi-standard capable (GSM/EDGE/WCDMA/LTE), but for this effort only the LTE mode is tested. The FRBG supports three downlink modulation types for LTE (QPSK, 16QAM and 64QAM). The FRBG supports two LTE channel bandwidths (5 MHz and 10 MHz).

The FRBG has external interfaces including DC power, ground, TX/RX (Ant), RX monitor (RXO), external alarm (EAC), optical OBSAI (OPT) and remote electrical tilt (RET). The RRH with applicable installation kit may be pole or wall mounted.

The FRBG LTE channel numbers and frequencies are as follows:

	Downlink EARFCN	Downlink Frequency (MHz)	LTE Channel Bandwidth	
			5 MHz	10 MHz
Band 29 (Ant 3 and 4)	9670	718.0	Bandedge	Bandedge
				
	9695	720.5	Bottom Ch	
				
	9720	723.0	Middle Ch	Bottom Ch Middle Ch Top Channel
				
	9745	725.5	Top Channel	
				
	9770	728.0	Bandedge	Bandedge
Band 12 (Ant 1 and 2)	5010	729.0	Bandedge	Bandedge
				
	5035	731.5	Bottom Ch	
				
	5060	734.0		Bottom Ch
				
	5090	737.0	Middle Ch	Middle Ch
				
	5120	740.0		Top Channel
				
	5145	742.5	Top Channel	
				
	5170	745	Bandedge	Bandedge

FRBG Downlink LTE Frequency Channels

The sample was received on Feb 5, 2015 and tested on Feb 5 - Apr 14, 2015. The EUT consisted of the following component(s):

Company	Model	Description	Part/Serial Number	FCC ID/IC Number
Nokia Solutions and Networks	FRBG	Flexi Multiradio BTS RRH	Part#: 473188A.x11 Serial#: YK144100004	FCC ID: VBNFRBG-01 IC: 661W-FRBG

ENCLOSURE

The EUT enclosure is made of heavy duty aluminum and measures approximately 12(W) x 7(D) x 24(H) inches.

AUXILIARY EQUIPMENT

Company	Model	Description	Part/Serial Number	FCC ID/IC Number
Nokia Solutions and Networks	FOSH	6GHz SFP Module (Plugs into RRH Opt Ports 1&2)	Part#: 472579A.101 (2 units per RRH) Serial#: CE30LC5Z2 and CE30LCCBA	N/A

SUPPORT EQUIPMENT

Company	Model	Description	Part/Serial Number	FCC ID/IC Number
Nokia Solutions and Networks	FSMF	Flexi System Module	Part#: 472181A.103	N/A
Nokia Solutions and Networks	FBBA	Baseband Extension Module	Part#: 472182A.101 (2 units per FSMF)	N/A
HP	Elite Book 6930p	Laptop PC	N/A	N/A

EUT INTERFACE PORTS

The I/O cabling configuration during testing was as follows:

Cable	Type	Shield	Length	Used in Test	Quantity	Termination
Power Input	Power	No	~ 3 m	Yes	1	Power Supply
Earth	Earth	No	~ 1 m	Yes	1	Lab earth ground
Antenna	RF	Yes	~ 3 m	Yes	4	50Ω Load
RX monitor	RF	Yes	~ 2 m	Yes	2	50Ω Load
External Alarm	Signal	Yes	~ 3 m	Yes	1	Un-terminated
Remote Electrical Tilt	Signal	Yes	~ 3 m	Yes	1	Un-terminated
Multimode Optical	Optical	No	>6 m	Yes	2	System Module

The connector layout for FRBG is provided below:

FRBG External Interfaces:

Name	Qty	Connector Type	Purpose (and Description)
DC In	1	Screw Terminal	3-port Power Input -48 VDC, up to AWG 4 cable
GND	1	Screw lug (2xM5/1xM8)	Ground
ANT	4	7/16	RF signal for Transmitter/Receiver (50 Ohm)
RXO	4	QMA	RX output for monitoring/location services
Unit	1	LED	Unit Status LED
LMP	1	Card edge	Local Management/Test Port (Ethernet 10Base-T/100Base-Tx and others, not field accessible)
EAC	1	MDR14	External Alarm Interface (4 alarms)
OPT	3	SFP+ cage	Optical OBSAI Interface up to 6 Gps.
RET	1	8-pin circular connector conforming to IEC 60130-9 – Ed.3.0	AISG 2.0 to external devices

EUT OPERATION

During testing, the EUT was transmitting continuously with 100% duty-cycle at full power on all chains.

EUT FIRMWARE/SOFTWARE

The laptop PC connects to the FSMF System Module over the LMP (Ethernet) port. The system module controls the FRBG RRH via the optical (OBSAI) interface. The laptop is used for changing configuration settings, monitoring tests and controlling the BTS. The following software versions are used for the FRBG testing:

- (1) RRH Unit Software: FRM3401R10_FRBEFG
- (2) System Module Software: FB_PS_REL_2013_09_016

MODIFICATIONS

No modifications were made to the EUT during testing.

TESTING**GENERAL INFORMATION**

Antenna port measurements were taken at NTS Plano branch located at 1701 E Plano Pkwy #150 Plano, TX 75074.

Radiated spurious emissions measurements were taken at the NTS Plano Anechoic Chamber listed below. The sites conform to the requirements of ANSI C63.4-2009 *American National Standard for Methods of Measurement of Radio-Noise Emissions from Low-Voltage Electrical and Electronic Equipment in the Range of 9 kHz to 40 GHz* and CISPR 16-1-4:2007 - *Specification for radio disturbance and immunity measuring apparatus and methods Part 1-4: Radio disturbance and immunity measuring apparatus Ancillary equipment Radiated disturbances*. They are on file with the FCC and Industry Canada.

Site	Registration Numbers		Location
	FCC	Canada	
Chamber 1	A2LA Accredited Designation Number US1077	IC 4319A	1701 E Plano Pkwy #150 Plano, TX 75074.

Considerable engineering effort has been expended to ensure that the facilities conform to all pertinent requirements.

MEASUREMENT PROCEDURES

Output power, emission bandwidth, conducted spurious, conducted bandedge and carrier frequency stability measurements were all performed via a spectrum analyzer connected to the individual RF chains via a 40dB attenuator and an RF cable. The EUT was operating in 2x2 MIMO configuration in each frequency band at full power for all tests. While measuring one transmit chain, others were terminated with termination blocks. All measurements were corrected for the insertion loss of the attenuator and cable inserted between the RF port of the EUT and the spectrum analyzer. Simple test diagram is shown below.

Test Configuration for Antenna Port Measurements

26dB emission bandwidth was measured in accordance with Section 4.1 of FCC KDB 971168 D01 v02r02. 99% occupied bandwidth was measured in accordance with Section 6.6 of RSS-Gen Issue 4. For both measurements an NTS custom software tool was used. Spectrum analyzer settings are shown on their corresponding plots in test results section.

Emissions at the band-edges were also captured with an NTS custom software tool with settings described in the corresponding sections of the FCC and IC rules. Spectrum analyzer settings are shown on their corresponding plots in test results section.

Peak and average output power measurements were performed in accordance with FCC KDB 971168 D01 v02r02. An NTS custom software tool was used for power integration to compensate for resolution bandwidth limitations of the spectrum analyzer and settings are shown on their corresponding plots in test results section.

Peak to average power ratio was calculated in accordance with Section 5.7.2 of FCC KDB 971168 D01 v02r02.

Conducted spurious emissions were captured with TILE6 software which corrected the readings for cable loss and attenuator loss across the 9kHz-8GHz frequency span. Settings of the spectrum analyzer are described in the corresponding test result section.

For frequency stability, the EUT was placed inside a temperature chamber with all support and test equipment located outside of the chamber. Temperature was varied across the specified range in 10 degree increments and EUT was allowed enough time to stabilize at each temperature step. A signal analyzer as detailed in the test equipment section has been used for précised frequency error measurements.

Transmitter radiated spurious emissions measurements were made in accordance with ANSI C63.4-2009 by measuring the field strength of the emissions from the device at 3m

test distance. The eirp limit as specified in the relevant rule part(s) is converted to a field strength at the test distance and the emissions from the EUT are then compared to that limit. Only emissions within 20dB of this limit are subjected to a substitution measurement in accordance with TIA-603-C-2004. Both preliminary and final measurements were performed at the same FCC listed test chamber. Preliminary scans were performed with TILE6 software. This software corrected the measurements for antenna factors, cable losses and pre-amplifier gains. Both polarizations of the receiving antenna were scanned from 30MHz to 8GHz with a peak detector (RBW=100kHz, VBW=300kHz, with trace max hold over multiple sweeps). Based on the preliminary scan results, frequencies of interest have been maximized via rotating the EUT 360 degrees and varying the height of the test antenna (1m to 4m). Final measurements were also taken with the peak detector as described above. A biconilog antenna was used for 30MHz-1GHz range. A double ridged waveguide horn antenna was used for 1-8GHz range. The antennas used to measure the radiated electric field strength are mounted on a non-conductive antenna mast equipped with a motor-drive to vary the antenna height. EUT was placed on a non-conductive RF transparent structure to provide 80cm height from the ground floor. A motorized turntable allowed it to be rotated during testing to determine the angle with the highest level of emissions.

Appendix A Test Data

RF Output Power

RF output power has been measured in both Peak and RMS Average terms in both frequency bands for each transmit chain at the center channel for all modulations and bandwidth modes. Peak to average ratio (PAR) has been calculated as described in Section 5.7.2 of KDB971168 D01 v02r02 and all results are presented in tabular form below.

Results for 718MHz – 728MHz band:

		LTE - QPSK			LTE - 16QAM			LTE - 64QAM		
		Peak (dBm)	Average (dBm)	PAR (dB)	Peak (dBm)	Average (dBm)	PAR (dB)	Peak (dBm)	Average (dBm)	PAR (dB)
Port 3 Center Ch	5M	55.25	45.3	9.95	55.91	45.17	10.74	55.13	45.3	9.83
	10M	55.36	45.25	10.11	55.94	45.15	10.79	55.24	45.19	10.05
Port 4 Center Ch	5M	55.23	45.24	9.99	55.88	45.18	10.7	55.11	45.27	9.84
	10M	55.39	45.23	10.16	55.87	45.11	10.76	55.17	45.12	10.05
Combined Center Ch	5M	58.25	48.28	9.97	58.91	48.19	10.72	58.13	48.3	9.83
	10M	58.39	48.25	10.14	58.92	48.14	10.78	58.22	48.17	10.05

Based on the results above, Port 3 had the highest RMS average power and therefore it was selected for all the remaining antenna port tests on the product.

Subsequently output power levels on lowest and highest channels in 5MHz channel bandwidth mode were tested only at Port 3 and results presented below. 10MHz channel bandwidth mode had only 1 channel of operation at the center.

		LTE - QPSK			LTE - 16QAM			LTE - 64QAM		
		Peak (dBm)	Average (dBm)	PAR (dB)	Peak (dBm)	Average (dBm)	PAR (dB)	Peak (dBm)	Average (dBm)	PAR (dB)
Port 3 Low Ch	5M	55.39	45.28	10.11	56.01	45.23	10.78	55.16	45.28	9.88
Port 3 High Ch	5M	55.09	45.04	10.05	55.84	45.09	10.75	54.99	45.06	9.93

All corresponding plots included on the following pages. Total path loss of 40.4dB (Attenuator Loss: 40dB, RF cable loss: 0.4dB) accounted in via reference level offset to the spectrum analyzer.

Results for 729MHz – 745MHz band:

		LTE - QPSK			LTE - 16QAM			LTE - 64QAM		
		Peak (dBm)	Average (dBm)	PAR (dB)	Peak (dBm)	Average (dBm)	PAR (dB)	Peak (dBm)	Average (dBm)	PAR (dB)
Port 1 Center Ch	5M	55.8	45.77	10.03	56.45	45.81	10.64	55.65	45.79	9.86
	10M	55.86	45.68	10.18	56.46	45.67	10.79	55.72	45.67	10.05
Port 2 Center Ch	5M	55.84	45.78	10.06	56.47	45.62	10.85	55.66	45.8	9.86
	10M	55.95	45.81	10.14	56.47	45.73	10.74	55.77	45.69	10.08
Combined Center Ch	5M	58.83	48.79	10.04	59.47	48.73	10.74	58.67	48.81	9.86
	10M	58.92	48.76	10.16	59.48	48.71	10.77	58.76	48.69	10.07

Based on the results above, Port 2 had both the highest Peak power and the highest RMS average power and therefore it was selected for all the remaining antenna port tests on the product.

Subsequently output power levels on lowest and highest channels in 5MHz and 10MHz channel bandwidth modes were tested only at Port 2 and results presented below.

		LTE - QPSK			LTE - 16QAM			LTE - 64QAM

Antenna Port Conducted Bandedge718MHz – 728MHz band (Port 3):

Limit is -13dBm per §27.53(f) and is further reduced by $10 \cdot \log(2)$ per FCC KDB 662911D01 v02r01 due to 2x2 MIMO operation, which brings it down to -16.02dBm.

In 5MHz channel bandwidth mode, low and high channels as well as dual carrier mode (low channel + high channel) configurations were tested. In 10MHz channel bandwidth mode, unit can only operate in single carrier mode at the center channel.

Results summary:

	LTE - QPSK		LTE - 16QAM		LTE - 64QAM	
	Low	High	Low	High	Low	High
5M	-27.41	-27.61	-27.9	-27.56	-28.4	-27.4
10M	-24.2	-24.03	-24.72	-23.67	-24.47	-24.41
5M Dual	-30.17	-29.84	-30.65	-30.36	-30.74	-29.32

All corresponding plots are included on the following pages.

Measurements performed in RMS average mode with 100kHz RBW and 300kHz VBW over 100 traces. In 100kHz bands immediately outside and adjacent to the frequency block, resolution bandwidth has been reduced to 30kHz as allowed in §27.53(f).

Total path loss of 40.4dB accounted in via reference level offset to the spectrum analyzer.

729MHz – 745MHz band (Port 2):

Limit is -13dBm per §27.53(f) and is further reduced by $10 \cdot \log(2)$ per FCC KDB 662911D01 v02r01 due to 2x2 MIMO operation, which brings it down to -16.02dBm.

Transmitter Radiated Spurious Emissions

Antenna port conducted spurious emissions tests produced similar results for all modulations and channel bandwidth modes. Preliminary scans for radiated spurious emissions were performed in 30MHz – 8GHz frequency range in the following configuration:

Transmitting in 5MHz-64QAM-LTE mode at center channel (737MHz) on ports 1 and 2.

Transmitting in 5MHz-64QAM-LTE mode at center channel (723MHz) on ports 3 and 4.

Final maximized peak radiated emissions were measured in these modes. During testing all 4 antenna ports of the base station were terminated with 50ohm termination blocks and unit was transmitting on all of its ports at full power as described above.

Frequency (MHz)	Polarity (H/V)	Raw Reading at 3m (dBuV)	Amplifier Gain (dB)	Antenna Factor (dB/m)	Cable Loss (dB)	Corrected Field Strength at 3m (dBuV/m)	Limit at 3m (dBuV/m)	Margin (dB)
921.6	V	45.2	-38.3	24.9	3.8	35.6	82.2	-46.6
921.6	H	42.1	-38.3	24.9	3.8	32.5	82.2	-49.7
1000	V	38.5	-37.5	25.2	4	30.2	82.2	-52
1000	H	37.2	-37.5	25.2	4	28.9	82.2	-53.3
1228.8	V	46.2	-49.4	25.5	3.4	25.7	82.2	-56.5
1228.8	H	44.6	-49.4	25.5	3.4	24.1	82.2	-58.1
2457.6	V	47.1	-48.2	28.4	4.4	31.7	82.2	-50.5

7920 (NF)	V	39.3	-45.4	37	7.9	38.8	82.2	-43.4
7920 (NF)	H	39.6	-45.4	37	7.9	39.1	82.2	-43.1
Corrected Field Strength = Raw Reading + Amplifier Gain + Antenna Factor + Cable Loss								
Negative margin indicates a passing result.								
Detector: Peak, RBW=100kHz, VBW=300kHz, Max-hold								
NF: Noise Floor								

Highest noise floor of the measurement instrumentation was more than 20dB below the 82.2dBuV/m at 3m limit (equivalent to -13dBm EIRP).

Since all maximized readings were more than 20dB below the 82.2dBuV/m at 3m limit (equivalent to -13dBm EIRP), substitution measurements were not performed.

TILE software was used for all prescans and plots included on the following pages. The limit shown on the plots is 20dB below the 82.2dBuV/m at 3m limit.

30MHz – 1GHz Peak Prescan at 3m - H

30MHz – 1GHz Peak Prescan at 3m - V

1GHz – 8GHz Peak Prescan at 3m – H

1GHz – 8GHz Peak Prescan at 3m – V

Frequency Stability

In order to demonstrate carrier frequency stability at extreme temperatures and voltages, frequency error was measured in the following configuration:

Transmitting in 10MHz-64QAM-LTE mode at center channel (737MHz) on port 2.

Transmitting in 10MHz-64QAM-LTE mode at center channel (723MHz) on port 3.

Nominal operating voltage of the product is declared as 48VDC.

Frequency error results are listed below for extreme voltages and temperatures.

Extreme Voltages

	723MHz	737MHz
20C	Freq. Error (mHz)	Freq. Error (mHz)
40.8VDC	451	548
55.2VDC	435	378

Extreme Temperatures

	723MHz	737MHz
48VDC	Freq. Error (mHz)	Freq. Error (mHz)
-30	259	512
-20	325	358
-10	271	414
0	267	520
10	238	593
20	278	528
30	412	505
40	256	562
50	362	497

Based on the results above, highest recorded frequency error is equivalent to 0.0008ppm, which ensures that the transmitted signal remains in its authorized frequency block at extreme voltages and temperatures.

Results above are deemed sufficient to demonstrate carrier frequency stability for all other channel bandwidth modes and modulations since all carriers are controlled by the same frequency stabilization circuitry that was subjected to the extreme conditions under this test.
