Subject: Test of SAZO GPS (Model: 336A, SAZO GPS)

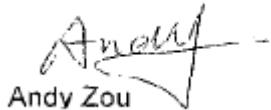

Dear Sirs,

This is to confirm that the SAZO GPS has an internal bought out GSM Module "MC-55" manufactured by Siemens.

The communication tests with this GSM Module were done with a base station simulator which prompted the GSM Module for maximum power emissions.

This GSM Module does not have external/other controls of communication power of this GSM Module, which as mentioned previously is a standard bought out component used without any modification.

Best Regards

Andy Zou
