

Dear Tim,

Refering to your comments, here's the responses:

For comment 3) :Corrected users manual mentions device can be used with "with a Alfatech Electronic Co., Ltd

accessory designated for this product". However it is uncertain what types of accessories are approved. The manual makes so specific mention of accessories and if any accessories do contain metal, they must have been tested. Currently specific accessories do not appear to have been tested.. Note that body worn use was tested only stand alone.

**Ans: Cusotmer doesn't design any accessories fot this product now.**

For comment 4): Note that the SAR table for body worn cites 1.5 cm while the plots show "touch".  
Photographs

appear to show separation. Please clarify how body worn position was for test. If necessary, please correct report.

**Ans: Pls check uploaded new SAR test report which been revise in P.54.56.58 and P.63.  
The DUT position is changed into body worn.**

And for point 1) and 2), Siemes will sent the needed documents to you directly.

If there is any problem,pls tell me.

BR,  
Emily
