Attn: Director of Certification

Information for application for FCC ID#: VDCAA

Pursuant to Sections 15.105 information to user FCC Personal Computer Peripherals, the applicant hereby states that the Wireless Internet Appliance aka Chumby is not a Personal Computer nor is it a Personal Computer Peripheral.

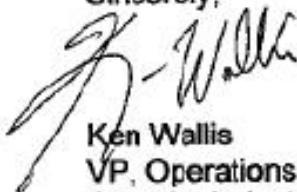

The Chumby is a device that displays information (flash based feeds or 'widgets') from the internet using your wireless Wi-Fi 802.11b/g internet router and connection. It is not connected at any time to a Personal Computer.

It is not a Personal Computer because:

- It does not have a keyboard
- It does not have a mouse
- It does not have expansion ports
- It does not have a hard disk
- It does not have a CD-ROM or DVD player
- You cannot load applications
- You cannot change the Operating System (OS)

For tests requiring normal test mode, a wireless connection using Wi-Fi 802.11 b/g was made with the Equipment Under Test. A Personal Computer is not part of its operation.

Sincerely,

Ken Wallis
