Hi S.S and Iris,

Please address following issues.

Q#1: Operational description doesn't mention how the FM transmitter works. Please provide more information to address how the FM transmitter works.

Q#2: Except the panel size, please confirm whether the circuit design, including RF transmitter used for two models are identical.

Q#3: Please provide the bottom side photo of EUT external.

Q#4: Please provide complete EUT internal photos.

Q#5: Test report page 23 indicates 20dB bandwidth was test with 1 kHz audio modulation input signal which is not acceptable. Per ANSI C63.4, bandwidth test should be carried out with maximum input signal and user controls adjusted to maximize emission. Please address.

Q#6: This device has a USB port for inserting some digital media cards which is considered as a peripheral device, too. Per 15.101, verification should be met at the same time. So please confirm whether Part 15B test is complied and also provide the user manual with Part 15.105 user manual inside.

Best Regards,

Lucy
