

A photograph showing the internal components of a custom-built portable electronic device. The device is housed in a black plastic enclosure with a silver-colored metal front panel. The internal components include a green printed circuit board (PCB) populated with various electronic components, including integrated circuits, capacitors, and resistors. A large black electrolytic capacitor is visible on the left side of the PCB. A silver-colored metal heat sink is mounted on the right side of the PCB. A black fan is mounted on the top of the device. The device is connected to a power source via a red and black cable. A yellow ruler is placed horizontally below the device for scale.
