

The description of difference

Description of the differences between AC9001T & AC9001TG

We entrusted Shenzhen Hongcai Testing Technology Co., Ltd. International Inspection and Certification Company to carry out FCC certification for AC9001T and AC9001TG;

They use the same SCH and PCB and use the same materials;

Their difference:

The AC9001T uses two keys to control the same light. The code for the two keys is the same, but the AC9001TG uses two keys to control the difference light (glazing and glazing), so the code for the two keys is different;

Description of the model differences in AC9001T & AC9001TG

The AC9001T single lamp will be added with another model TR322A, the difference is "model addition", the product content is the same.

Another model of AC9001TG is to add TR322B as another model.

The difference is "model addition" and the product content is the same.
