FM-Transmitter Preamp for Acoustic guitar

---

## OPERATIONAL DESCRIPTION

This item is a preamp for acoustic guitar with the function of FM transmitter.

It can operate when the piezo transducer is connected to the input jack of the unit.

It is operate by power of 9V battery.

Sound tone can be controlled with Bass, Middle and Treble controller.

FM Transmitter is designed to operate on frequency in the 90.3 ~ 93.3 MHz.

It equips LC oscillator circuit operated by two transistor without stereo modulation.

The amplified RF is transmitted via transmitting antenna.

The frequency is controlled by turning Frequency control knob continuously.
