

ANTENNA TEST REPORT

Test Place

Company Name	UL Japan, Inc. Ise EMC Lab.
Address	4383-326 Asama-cho, Ise-shi, Mie-ken 516-0021 Japan
Telephone Number	+81-596-24-8999

Equipment Under Test (EUT)

Description	Contour next GEN
Manufacturer	PHC Corporation
Model Number	GM-7902H
Frequency of Operation	2402MH to 2480MHz
Antenna Type	Pattern Antenna

For the shape of the antenna is refer to Internal Photo.

Test Procedure

Test configuration	EUT was placed on a platform of nominal size, 0.5 m by 0.5 m, raised 1.5 m above the conducting ground plane. The measurements were performed for both vertical and horizontal antenna polarization with the Spectrum Analyzer. The setup are shown in Figure 1.
Test procedure	Step 1 The tests have been measured in semi anechoic chamber at the distance of 3 m between the Substitution Antenna and the measuring Antenna, both Antennas were placed for the height 1.5 m. The Substitution Antenna has been connected to the Signal Generator. Step 2 The output power of the Signal Generator was setting value calculated by compensating the finite difference in the Antenna gain of Substitution Antenna. Step 3 The electric field strength at the distance of 3 m is received via the measurement antenna, and the reference value at that time is measured with a spectrum analyzer. Step 4 The measurements were performed for both vertical and horizontal antenna polarization. Step 5 Exchanged the Substitution Antenna to the EUT, the output power of the Signal Generator was setting value calculated by 0 dBm at the input of EUT. Step 6 The EUT was rotated a full revolution and recorded the electric field strength for each degree. Step 7 Calculate and record the difference from the value recorded in Step 6 to the value recorded in Step 3. Step 8 The measurement in steps 5 to 7 repeated with both vertical and horizontal antenna polarization, each position of XY, YZ and ZX-plane of EUT.

Antenna gain [UNIT: dBi]

Peak	2402	2440	2480
Frequency [MHz]	2402	2440	2480
Peak gain	3.17	2.43	1.07

Average (角度1度毎の値を真値平均した結果)

Frequency [MHz]	2402	2440	2480
XY-plane Hori.	-11.59	-11.93	-14.08
XY-plane Vert.	-5.73	-6.16	-6.80
Avg (H/V)	-7.74	-8.15	-9.06
YZ-plane Hori.	-3.45	-4.03	-4.94
YZ-plane Vert.	-13.64	-14.61	-15.51
Avg (H/V)	-6.06	-6.68	-7.59
ZX-plane Hori.	-6.39	-7.49	-7.91
ZX-plane Vert.	-4.29	-4.04	-4.76
Avg (H/V)	-5.21	-5.43	-6.05
Total	-6.22	-6.61	-7.40

***Hyphens for Last Calibration Date and Cal Int (month) are instruments that Calibration is not required (e.g. software), or instruments checked in advance before use.**

The expiration date of the calibration is the end of the expired month.

As for some calibrations performed after the tested dates, those test equipment have been controlled by means of an unbroken chains of calibrations.

All equipment is calibrated with valid calibrations. Each measurement data is traceable to the national or international standards.
