### **RF Exposure Calculation**

**agent:** dresden elektronik ingenieurtechnik gmbh  
**client:** Atmel Automotive GmbH  
**FCC ID:** VNR-S31SM-V4-00  
**FCC Part 15 Certification**

Dear Sir or Madam,

End-users may not be provided with the module installation instructions. OEM integrators and end-users must be provided with transmitter operating conditions for satisfying RF exposure compliance.

For portable applications OEM integrators need no SAR evaluation. The max source-based time-averaged output of 10.16 mW is below the low threshold of 24 mW for distance < 2.5 cm.

### **Section 15.203: Antenna requirement**

An intentional radiator shall be designed to ensure that no antenna other than that furnished by the responsible party shall be used with the device. The use of a permanently attached antenna or of an antenna that uses a unique coupling to the intentional radiator shall be considered sufficient to comply with the provisions of this section. The manufacturer may design the unit so that a broken antenna can be replaced by the user, but the use of a standard antenna jack or electrical connector is prohibited.

The following calculation is the reference data for distance < 2.5cm.

name		value	log value	
maximum conducted power		10.16 mW	10.07 dBm	
maximum antenna gain		1.00	0.0 dBi	
calculated radiated power		10.16 mW	10.07 dBm	
duty cycle factor				
frequency		2400 MHz		
dwell time		100 ms		
time of occupancy / pulse-train time		100 ms		
duty cycle factor		100 %	0.00 dB	
maxium source-based time-averaged power				
conducted power		1.54 mW	1.88 dBm	
calculated radiated power		1.54 mW	1.88 dBm	
Specific power				
calculated with max source-based time-averaged power				
measured conducted power				
$S = \frac{P \cdot G}{4 \cdot \pi \cdot r^2} \left[ \frac{mW}{cm^2} \right]$				
r [cm]	20.00	2.50	1.50	0.90
S [mW/cm²]	0.0020	0.1294	0.3594	1.0
limit general population [mW/cm²]	1.0			
limit occupational population [mW/cm²]	5.0			
calculated with max source-based time-averaged power				
measured radiated power				
$S = \frac{EIRP}{4 \cdot \pi \cdot r^2} \left[ \frac{mW}{cm^2} \right]$				
r [cm]	20.00	2.50	1.50	n.a.
S [mW/cm²]	n.a.	n.a.	n.a.	1.0

Sincerely,
